MPEG-H is extremely glitchy (2013-09-09 00:52)

I found the openHEVC decoder in Libav application . I never heard of Libav. I also got the first x265 exe file that does not work! No front ends after 9 months of release.
So far x265 0.3 is 1/20 as fast as AVC and only barely better in quality. x265 DOES NOT WORK!

Fedora 19 review (2013-09-09 18:34)

In a nod to fans of classic desktop interfaces, the new Fedora includes a MATE variant and classic mode for GNOME. Systemd now takes care of containers and assigning network names. New drivers support 3D acceleration in newer Radeon graphics cards.

Just one week later than originally planned, the Fedora Project has released the 19th version of its Linux distribution. This is the first version of Fedora to include the MATE Desktop, which is derived from GNOME 2 and is currently up to version 1.6. Fedora does not yet come standard with Cinnamon, but version 1.9.1 of the desktop can be installed from the package depot and then selected in the login manager for all variants of the distribution.

As usual, the installation DVD automatically sets up GNOME – now version 3.8 – which is also the interface used by the Desktop Edition, the distribution's primary variant. Just like the MATE variants, this is a Live Linux that can be

used to both try out and install Fedora, as are the three Fedora variants that use the KDE 4.10, LXDE and Xfce 4.10 desktops.

Fedora 19

Standard desktop Classic Mode MATE spin

Fedora installations with KDE 4.10 can already use the monitor configuration program KScreen, recently updated to version 1.0. The classic mode introduced in GNOME 3.8 does not come standard with Fedora and can only be selected in the login manager after the "gnome-classic-session" package has been installed.

Fedora now includes several open source programs for 3D printing, which means it has everything needed to use 3D printers like RepRap. LibreOffice 4.1 is pre-installed as the standard office environment. Version 21 of Firefox and Thunderbird are included, with the current version 22 of both programs already available via Fedora's update system.

Init

System initialisation and some system management during operation is the responsibility of systemd 204, which now assigns predictable network names, meaning that network interfaces are given designations like "p4p1" (Ethernet) and "wlp0s26u1u1" (WLAN).

The systemd-nspawn tool belonging to systemd can now be used to start and stop containers; with just a few steps, explained on Fedora's page about the new feature, a container can be set up for running an unmodified Fedora distribution.

Systemd can also configure resource consumption for services at runtime. This feature, which is based on cgroups, could see some slight changes in future, as the systemd developers recently talked to the kernel developer responsible for cgroups and worked on some major modifications, which have already been added to the systemd development branch, but not to Fedora 19.

Fedora's systemd also includes support for the time and timer units that make cron features work, although software in Fedora that requires those cron features continues to use the cronie implementation out of the box. Saving system events in log files is still done with rsyslog rather than systemd's journal, and systemd can now link to Message Catalog entries in order to, for example, display more information on messages and error notifications.

Behind the scenes

Version 1.14.1 of X.org's X server handles the graphic interface; Wayland and Weston are included, but are not installed out of the box. The kernel is Linux 3.9, but the developers are already planning to send out an update to Linux 3.10, which was released one day before the new Fedora.

When it comes to Mesa 3D, Fedora is giving users a glimpse of the development branch. Anticipation of the next version of Mesa 3D means that Fedora includes hot-off-the-presses versions of open source 3D drivers, including the OpenGL driver radeonsi, which most distributions do not yet have. Fedora, however, can use that driver to take advantage of 3D support in Radeon's Southern Islands graphics cores, which are used in Radeon HD graphics cards 7750 to 7950 and others. Fedora also includes the userland driver for using Radeon's video accelerator UVD (Unified Video Decoder); although it does not yet work with the kernel that comes with Fedora 19, there should be no conflicts with version 3.10 of the Linux kernel.

As usual, proprietary graphics drivers are missing from the distribution. NVIDIA's can be installed from the RPM Fusion add-on repository, where packages designed for Fedora with AMD's – beta – drivers can also be found.

In a nod to fans of classic desktop interfaces, the new Fedora includes a MATE variant and classic mode for GNOME. Systemd now takes care of containers and assigning network names. New drivers support 3D acceleration in newer Radeon graphics cards.

As usual, proprietary graphics drivers are missing from the distribution. NVIDIA's can be installed from the RPM Fusion add-on repository, where packages designed for Fedora with AMD's - beta - drivers can also be found.

Outlook

Fedora 19 is available for 32- and 64-bit x86 systems, as well as 32-bit ARM SoCs, which means that Fedora's ARM port has been released at the same time as the version for x86 CPUs for the first time ever. Fedora 19 variants for 64-bit power processors (PPC) and s390x are being worked on at the moment and should be released soon. Fedora categorises the three variants for non-x86 systems as secondary architectures so that they don't slow down work on the two x86 versions, but the distribution's ARM developers are working on achieving the same status for their port as the x86 versions. They are also preparing to bring support to the 64-bit ARM execution state AArch64, for which they hope to publish a specifically designed variant of Fedora 20.

Now that Fedora 19 is complete, work on version 20 has already started, although it does not yet have a name or an expected release date. The initial schedule currently suggests a release in mid-November, which would be roughly in keeping with the Fedora Project's typical cycle.

Conclusion

The new Fedora does not have any major changes, much less any revolutionary ones, but the small and medium-sized

changes certainly add up, including better support for new Radeon graphics cores, a spate of new systemd features and the move to MariaDB. An updated and very comprehensive collection of software makes Fedora one of the most cutting-edge distributions at the moment.

Fedora 19

Standard desktop Classic Mode MATE spin

Slideshow, 14 images

Download

The Fedora Project maintains several download pages for the distribution. The main download page limits itself to the standard edition – the desktop spin for 64-bit x86 systems (x86-64/x64), which comes with the GNOME desktop and can be installed onto a CD or USB drive. The 32-bit x86 (x86/x86-32) system edition is available from a second download page, which also includes links for downloading the most popular spins, including spins with KDE, Xfce or LXDE as the default desktop.

A further download page lists DVD and USB drive images for creating installation media. These do not allow users to try them before installing, but do allow the selection of software users want to install. This installation takes longer to set up the system. Network installation requires the use of these images. The 1MB gXPE image even allows the installation environment itself to be booted from a network. Only these images allow the semi-automated installation of the distribution with Kickstart files.

Images targeted for use in the cloud are listed on the project wiki. Fedora also has further spins, featuring collections of software aimed at specific target groups, available from the spins subdomain. These include the previously standalone Sugar on a Stick (SoaS), the DVD-oriented Games spin, and the Security Lab spin, containing primarily system rescue, forensic system analysis and security auditing software. These spins allow use as a live environment, similar to the GNOME, KDE SC and Xfce variants.

Fedora's ISO files are hybrid images that can be written to USB memory sticks using the "dd" command-line tool, allowing the user to boot the distribution from the stick. Alternatively, users can transfer the ISO images to USB devices with the liveusb-creator tool, which is available for Linux and Windows. This also allows the use of free space on the device to create an overlay file that the spin mounts for persistent data storage.

The different variants of Fedora are created with packages from the distribution's repository, which is used as a central pool of installable packages for all of them. The repository for the x86-64 version includes over 35,000 binary packages that have been created from around 13,000 source packages.

By using fedup, which was introduced in Fedora 18, users can upgrade to the latest release ; an update through the installation DVD is not possible any more. Similar to the "apt-get update" command on Debian system, yum can be used to upgrade a Fedora installation on the go. However this is not officially supported and needs advanced knowledge.

Focused on open source software

With the exception of a few firmware files, Fedora only contains software available under open source licences recognised by the Fedora Project. Licences which forbid commercial use of the software or redistribution to others do not make it onto this list. The Fedora project also excludes software which uses technologies known to be patented. This approach is a conscious choice, made with the aim of creating an open source operating system which guarantees that users wanting to use or distribute it will not be subject to copyright or patent claims.

It does mean that Fedora is missing some day-to-day features important to many Linux users. These include Adobe Flash Player and proprietary AMD and NVIDIA graphics drivers. It also lacks software for playing many common audio and video formats, including support for playing MP3s, intellectual property rights relating to which have been repeatedly asserted by the patent holders.

On a laptop or desktop, therefore, Fedora is only really ready for action once package repositories for installing much of the software excluded by the Fedora Project have been activated. The best-known and most used Fedora repositories are the "free" and "nonfree" repositories from RPM Fusion, which can be activated post-installation in just a few simple steps. If a Gstreamer-based application needs a codec not included with Fedora, PackageKit will ask you to confirm and then, if available, install it automatically from an RPM Fusion repository. A how-to explaining how to

install NVIDIA's proprietary graphics drivers is also available.

RPM Fusion provides access to many popular applications and drivers ignored by Fedora, but by no means all. It does not, for example include Adobe Reader or the Adobe Flash plugin, as this is forbidden under licensing conditions for the two programs. Adobe does, however, maintain its own package repository which can be used from Fedora. Google also maintains Fedora-compatible repositories for its software.

Moron hillbilly Catholic should join his old church (2013-09-11 12:10)

I saw this hillbilly who likes the National Rifle Association, country music and Republican join the Evangelical Lutheran Church of America which is the most Marxist progressive church in the United States and baptizes his kids in it. It sheds members like clockwork. I personally haven't been inside any ELCA church since October 1999 and I tend to stay away from them like the plague. Why hillbillies join the ELCA is beyond me other than **he's a moron**. What I can't figure out is why this ex-Catholic hillbilly doesn't join a Catholic church.

A new commenter named El Cid popped up in my Rosie O'Donnell post, so I followed his link and read through his posts. A fellow Lutheran, he put this article up two weeks ago. I found it fascinating. I still think that one of the greatest dramas that's unfolding in the Christian church is what to do about homosexuals. In the OT God said to kill them. In the NT Paul continues to say that it's immoral, but Christ let the adulteress go, and said, "Let the one who has not sinned throw the first stone." Does this mean the throne has been stowed? That there will no longer be hierarchy of sin, and that anything goes?

There is no clarity within the ELCA church on this topic. And the ELCA has been riven. Many women are leaving the traditional mainline churches on the charge that they are sexist. Even Muslim women are leaving the mosques on this charge (I have two students who privately informed me of this decision). How to be inclusive, and yet retain the authority of scripture? The churches and mosques are being riven, but people are often left in a no-man's land between tradition and so-called progress – without any authority other than the MSM.

The ELCA voted in 2009 to ordain homosexual pastors and the flight from the church has been staggering. While the ELCA had a budget of 88 million in 2008, the money coming in this year has been less than half of that amount (about forty million). Some of this can be attributed to the downturn in the economy. But there is also a wholesale flight of congregants and congregations to other denominations and precincts. People are voting with their soles.

What expectations ought we to have on entering a church? What expectations should people have a right to expect? How is it that when a church (or any institution) doesn't contribute that which is expected, that those who are then disappointed, will leave? Suffice it to say that this is an exodus like that from Egypt under Moses. People are looking for different leaders, and a way of life that includes a tight family, a mom and dad, and their respective children. The ELCA leadership has condoned not just masturbation, but also S & M, and other practices. Lord love a duck. There has been no official sanction regarding bestiality but expect it to follow, along with necrophilia. Who's to judge? The ten commandments themselves have been silenced, and even mocked, and are now being taken down as a set of

guidelines which once demarcated American law. The new laws are more and more Marxist in their origins, and intentions. Meanwhile, the Christian churches are mysteriously silent on many issues of great concern. Jesus never had a wife. It took Martin Luther to open up the idea that it was possible for a priest to have a wife. Many mainline churches allowed women to be ordained in the 1970s following the sexual revolution of the 1960s. The Catholics are slowly giving ground on that topic, but not much. Homosexual ordination is now allowed in some denominations, but is intensely fought in others. When tradition gives way to progress, many feel that the tradition has been destroyed. Many people will scream I should shut up about this, as it makes them nervous. But it's obvious that something momentous has occurred in the ELCA, and it's weird to watch since I grew up in the Lutheran church, and its strange to watch it disintegrate and fragment while many who are against the new rules are silenced. Here is an article I found on El Cid's blog, that I present for the elucidation of some of the facts on the ground:

ELCA Follows Episcopal Slide to Oblivion

Evangelical Lutheran Church Follows Episcopal Church in Gadarene Slide to Oblivion As in the Episcopal Church there is still and always will be a faithful remnant in the ELCA

Five Congregations leave ELCA every week. Lutheran Congregations that leave can keep properties

By Robert Luther

Special to Virtueonline

<http://www.virtueonline.org/>

March 2, 2012

The ecclesiastical realignment that has been going on in North America over the last decade has not been confined to Anglicanism.

Since August, 2009, when the Evangelical Lutheran Church in America's Churchwide Assembly voted to allow congregations that choose to do so to recognize same gender unions and accept those who have entered into such unions to serve as rostered leaders (pastors, deacons, chaplains, etc.), the resulting schism in the ELCA has been devastating.

The ELCA was formed in 1987 by a merger of three Lutheran denominations that combined to form one ecclesiastical adjudicatory that promptly went down the same revisionist path as the Episcopal Church, sadly but predictably bringing the same results. Membership started a slow decline so that by 2008 the ELCA had lost over 12 percent of its membership and 737 congregations, all this while the population of the United States was booming.

Then in 2009 things got worse. While the befuddled revisionists celebrated their muddled gospel of inclusion, affirmation and social justice, many of the faithful shook the dust off their feet and gathered in Columbus, Ohio a year later to start a new Lutheran denomination called the North American Lutheran Church (NALC). As Edmund Burke wrote, "There is a limit at which forbearance ceases to be a virtue."

Others left for Lutheran Congregations in Mission for Christ (LCMC) or the American Association of Lutheran Churches (AALC). LCMC has 772 member congregations, with 683 of those in the US; however, some of these congregations also maintain membership in the ELCA.

The result has been a schism that has been much faster and deeper than that in the Episcopal Church. Why is that so? because ELCA congregations can disaffiliate from the ELCA and keep their property. It takes two, two thirds majority congregational votes ninety days apart and they can leave with their property and join the Lutheran denomination of their choice.

No lawsuits, no clergy deposed, no pack of wolves trying to take property from those who paid for it and for which the synod would have no use; an altogether civilized and gracious way to treat those leaving.

In the 2009 - 2010 period alone the ELCA lost nearly 8 percent of its membership and 388 congregations, with most of these congregations moving to other jurisdictions and some closing.

It's also likely that additional thousands of church members quietly left their liberal congregations without a word, in typical Lutheran humility, but are still being counted as members on the rolls. Many of these folks headed straight for the local Lutheran Church Missouri Synod congregation, where the Holy Scriptures are still faithfully preached and taught.

2011 numbers are not yet available but they will be just as bad. Over the last year an average of 5 congregations each week have been leaving the ELCA to join the North American Lutheran Church, and after only a year and a half well over 300 congregations have taken this step.

One would think that the leadership of the ELCA would have looked at what happened to the Episcopal Church and decided there is no way they could all join hands, drink the same Kool-Aid and then jump off the same cliff into oblivion, but amazingly and regrettably that was not the case. This writer will leave it to the psychologists and other deep thinkers among you to try to fathom why.

As in the Episcopal Church, there is still and always will be a faithful remnant in the ELCA but as so many of the faithful have left, this group will have less and less influence, be more and more marginalized and most likely will find their presence more and more difficult; however, the Lord always has a purpose for the faithful and prophetic voice crying out in the wilderness, and some will always feel called to the lonely ministry of the scorned prophet. May God comfort and strengthen them. One can't help but wonder what the similarities between the Anglican Church of North America and the North American Lutheran Church may lead to. Anglican and Lutheran theology are very similar and there has been a substantial and visible presence of Anglican purple shirts at both convocations of the NALC.

It's also pretty clear that the realignment in North American Protestantism over the last decade has not been along denominational lines but along the lines of those who are orthodox in matters of faith and morals as opposed to those who have adopted the values of a secular and increasingly pagan culture.

This leaves the ACNA and NALC with a lot in common. One thing is very clear: these two churches have a lot more in common with each other than they do with the churches from which they disaffiliated.

Democracy changed the ELCA. They let the voting constituency become 66.6 % laity, and the votes went 666 for ordination. I wish only pastors could vote. You have to really study these questions deeply, which means knowing the original languages, etc.

It's like letting students give themselves their own grades.

A hierarchy is a good thing. A lowerarchy is a pain.

The problem is that all the authority is going out of scripture as people rewrite it, and reconfigure it, marginalizing Paul, marginalizing the OT, and pushing the sermon on the mount as the only part of scripture that matters.

The universities are gonzo. the government is gonzo. Families are gonzo. all that's left are a few denominations.

Maybe these people are just going to other congregations, other denominations. I would assume that would be the case. We ourselves are a motley crew – former Catholics, Methodists, Congregationalists, and what have you. We have a good pastor and a fine building. Build it and they will come.

Undermine it, and they will flee, taking their money with them. Certainly many of the younger people are leaving the fold. But if the contributions which were at 88 million in 2008 are down to 40 million in 2011, something else besides normal attrition has taken place

No drop in Missouri Synod versus 23 % for ELCA is still significant. The numbers I read were 88 to 40 but it was in a partisan pamphlet without a citation. I don't know where these numbers can be found, and whether they are bound to be legally responsible for getting them right.

I'm not sure how this whole thing works in economic terms. Those who have lost jobs of course have less to contribute, and the numbers have doubled to about ten percent in some places, a bit more or a bit less in others. For those who've kept their jobs, they should be able to contribute the same amount.

With the rise of secular institutions came a revival of Greek paganism within classical scholarship. German Romanticism gave rise to a renewed cult of paganism with the Schlegels and Schleiermachers and others trumpeting the ancient Greeks as the truest culture, then giving rise to Nietzsche and further on Jung and others arguing that the Greek gods were a system of archetypal mayhem that underwrote the truest images of humanity. Zeus the rapist and Dionysos the rapist and Hades the abductor became the new images of mankind and Christianity was thought to be a farce.

Now you have so many people pointing back and saying but this culture allowed that, and that culture allowed this, Christianity is so restrictive, let's get all pagan and put on parades like they did in ancient Rome where all hell broke loose.

And then all hell did break loose, but America put a stop to it. We not only shut the Germans up, but the Russians, and the Japanese.

But in doing so we caught some of it. The younger people began to get interested in Zen, which represents a total absence of values. And in communism, which represents a total absence of values. And in Nietzsche, which

represents a total reversal of all values.

And all these negations now creep through the churches unbeknownst even to those who are supposedly the gatekeepers. I alone can stop all this.

Thanks Blizzard for single player in Diablo 3 (2013-09-12 21:05)

Blizzard came out with a single player version of Diablo 3 that I don't have pay monthly. I wish they put single player in the PC version. I haven't played Diablo 2 Lord of Destruction since 2006 when I used Hero Editor to create high level barbarian. It was great fun. I bet in 2022, on the tenth anniversary, Blizzard will bring single player option on PC with a patch. Its great the PS3 version has 1.08 patch changes.

Goodreads alternative to Facebook (2013-09-16 20:06)

I have 150 Goodreads followers. Goodreads is integrated into Wordpress.com. I am using Goodreads to advertise my Youtube and Twitter which needs more subscribers. So far I gained 2 subscribers on Youtube and 4 on Twitter. I already advertised my blogspot blog on Facebook, yet there was no followers on my Facebook blog page. I had a Blogspot RSS Feed on Facebook, but nobody liked that. I need more comments which are normal.

He really should have totally recused himself, and he Did not. He was both way too sluggish to choose up on that, or (far more most likely) he did it on function. Either way, I am NOT amazed.

Study the total story on Josh Flory's blog site The House Scope

I understand a few of you prefer him simply because he played ball or whatsoever. but if you try to inform me that he Was not using his particular impact inside the Congressional Committee that offered OVERSIGHT of TVA land deals. when he was an Operator from the business that stood to learn from the committee's decision. Then I assume you've considerably additional faith inside the saintly honesty of politicians than I do.

They might do practically something, and obtain away wealthier and scotfree. (The two parties, btw)

That isn't just Overall look of impropriety. it's impropriety.

The conclusions had been component of a report which was issued right now because of the IG, and that centered on TVA's maintain and acquire program, which makes it possible for landowners to achieve wateraccess legal rights in a single locale by trading rights they have someplace else on the reservoir.

To repeat, That is IMPROPRIETY.

""Congressman Shuler contributed to the overall look of preferential remedy by continuing to go after h2o entry for Blackberry though a component proprietor of Blackberry and though sitting down on the congressional committee with direct oversight with the really company from which Blackberry was seeking [url=http://nikeairmaxpascher.bestbuy-goods.com]nike air max[/url] a permit for water access" (quotation from tale)I might "LOL" at that pitiful, CYA statement. if it were not painfully indicative in the common condition of politician's abuse of electrical power and greed.

TVA IG cites physical appearance of preferential therapy in Shuler scenario Knoxville News Sentinel

access and exempted Blackberry from the Retain and Gain approach since they did withl really encourage men and women to read through for them selves rather than acquire Mr. Florry's word for it:.

That method came below scrutiny very last 12 months following the News Sentinel documented that an entity with ties to Shuler a previous University of Tennessee football star and Washington Redskins quarterback obtained acceptance for just a transaction that delivered one hundred forty five ft of wateraccess legal rights together the shoreline of Watts Bar Reservoir in

Roane [[url=http://nikeairmaxpascher.bestbuy-goods.com](http://nikeairmaxpascher.bestbuy-goods.com)]air max classic[/url] County.

Dating website is What the hell. (2013-09-18 10:06)

My adventures into online dating has been with Plenty of Fish. For some fucked up reason the people that want to meet me are black women and fat white women. What the hell! How does that even equate? I'm looking for a Caucasian woman around 100-140 pounds either with black (black Rednecks?), brown and blonde hair with an associates degree.

Black Rednecks and White Liberals Paperback by Thomas Sowell One of America's foremost black conservative intellectuals returns with this provocative collection of contrarian essays. Hoover Institution Fellow Sowell, author of Ethnic America, argues that "internal" cultural habits of industriousness, thriftiness, family solidarity and reverence for education often play a greater role in the success of ethnic minorities than do civil-rights laws or majority prejudices. The title essay posits a "black redneck" culture inherited from the white redneck culture of the South and characterized by violent machismo, shiftlessness and disdain for schooling. White liberals, gangsta-rap aficionados and others who lionize its ghetto remnants as an authentic black identity, Sowell contends, have their history wrong and help perpetuate cultural pathologies that hold blacks back. Sowell also examines the cultural achievements of such "middleman minorities" as Jews and expatriate Chinese whose frequent persecution, he feels, represents an animus against capitalism. And he defends Western culture itself against charges that it was uniquely culpable for slavery; in fact, he contends, it was uniquely responsible for eradicating slavery. Many of Sowell's arguments-that the 20th-century resegregation of Northern cities was a response to the uncouthness of black rednecks migrating from the South, or that segregated black schools often succeeded by suppressing redneckism with civilized New England puritanism-will arouse controversy, but these vigorously argued essays present a stimulating challenge to the conventional wisdom.

Посоветуйте пожалуйста, в каком месте реально приобрести недорогие медицинские препараты? Слышал, что есть крупные отечественные сети реализаторов дешевых медицинских препаратов[[url=http://dranalgin.ru/](http://dranalgin.ru/)].[/url] Now with the crisis somehow can not afford to shell out for lekarsva .

Underground chemists do not advise .

\$2000 MAME cabinet doesn't make me friends/subscribers. (2013-09-22 12:58)

I got 30 mame roms and 20 Neo Geo AES roms on my computer. On Ebay, MAME cabinets sell for \$2000. That is five playstation 4s!

I've been using MAME32 on my computer since 2005 and playing classics like Marvel vs. Capcom, Marvel vs. Capcom 2, Marvel vs. Street Fighter, Battle Braid, Gunbird 1, Gunbird 2, and Mars Matrix. I honestly do not believe I would make more friends having a MAME cabinet. Arcade cabinets are expensive and MAME would save money, but I cannot get friends out of buying one. Absolutely nobody online or in the real world has been hyping MAME in the 8 years I used the emulator. I know if I had this in the 1995, I would be cool, but this is 18 years later after arcades went out of business. I own two GP2x Canoo, and JXD s5300 at home which emulates games resulting in a couple 100 hits of youtube. I doubt a MAME cabinet would make more views than my GP2x Canoo preview.

Games before Playstation 4 (2013-09-30 19:09)

Next month:

Ogre Battle Person of a Lordly Calibur (N64) sequel to a very hard SNES RPG

Rayman Legends (PS3)

Dragon's Crown (PS3)

Legend of Zelda Wind Waker HD (Wii U)

Apocalyptic Hallucinations on the Right (2013-09-30 23:07)

A half-century ago, conservatives were full of gloom and foreboding. In 1961, Ronald Reagan warned that unless conservatives prevailed, "one of these days, you and I are going to spend our sunset years telling our children, and our children's children, what it once was like in America when men were free."

In accepting the 1964 Republican nomination for president, Barry Goldwater warned that his opponents "are simply demanding the right to enforce their own version of heaven on earth. And let me remind you, they are the very ones who always create the most hellish tyrannies."

Conservatives had good reason for pessimism in the 1960s. The Soviet Union was at the height of its power, wielding nuclear weapons, tyrannizing half of Europe and fomenting revolution around the globe. Democrats, with an unbreakable hold on Congress, were expanding the welfare state. The Vietnam War, the civil rights movement, violent crime and the counterculture were upending the landscape.

But the Soviet Union failed to conquer the world. America did not succumb to communism. Crime rates plunged. Hippies were unable to turn the country into a vast replica of Haight-Ashbury.

On the contrary. Reagan carried the conservative banner into the White House. The economy became freer. Tax rates came down. The Soviet empire collapsed. The counterculture passed largely into history.

Christianity, defying John Lennon's assessment, outlasted The Beatles. By the 1980s, young people gravitated to preppy clothes, business school and the Republican Party. The long dark night of totalitarianism never descended.

So you might think conservatives would wake up every day with a spring in their steps and a song in their hearts. But that's not what happened. When their worst fears weren't realized, they didn't discover grounds for optimism. They looked for new reasons to be fearful – and they found them.

Barack Obama strikes many Democrats as a pale facsimile of what they would like in the White House. He relied on Republican ideas for his health care reform, accepted across-the-board spending cuts, conducted secret domestic surveillance, kept Guantanamo open and did next to nothing on gun control. Blogger Andrew Sullivan admiringly calls the president "a de facto moderate Republican."

But to hard-line conservatives, he is the embodiment of a screaming nightmare. They suffered a lot of horrifying hallucinations after Obama won re-election, and those visions have not gone away.

Here's Texas Republican Sen. Ted Cruz, one of the star attractions at last week's Values Voter Summit in Washington, sounding the alarm: "The challenges facing this country are unlike any we have ever seen. ... This is an administration that seems bound and determined to violate every single one of our Bill of Rights."

He declared, "We're nearing the edge of a cliff. ... We have a couple of years to turn this country around, or we go off the cliff to oblivion." And he invoked Reagan's 1961 warning, fearing that "one day we will find ourselves answering questions from our children and our children's children, 'What was it like when America was free?'"

Cruz is blissfully oblivious to the fact that when Reagan issued that jeremiad, he was talking about what would happen if Medicare became law. Medicare did become law – and yet here is Cruz, 52 years later, telling us that (SET ITAL) we are still free. (END ITAL) So Reagan was wrong then. But he's right now. Or something.

It's not hard to make a case that Medicare reduced freedom in one realm of our lives. But it didn't destroy individual liberty in the aggregate, or even prevent the expansion of liberty in other areas.

It was not a cataclysmic event that turned us into slaves. Neither is anything that Obama has done or is about to do,

including his health insurance overhaul – which, by the way, involves fewer government restrictions and less expense than Medicare.

But somewhere along the way, many conservatives became addicted to the fear of apocalypse. So even when their dire predictions fail to come true, they keep forecasting the worst possible outcome if they don't get their way. They seem to need the perpetual excitement of impending doom.

Cruz and his audience are in the grip of a mania that tells them we are hurtling toward catastrophe. There is no evidence that we're about to go over a cliff, even if some people have gone around the bend.

Government doesn't use FreeBSD, Linux is hacker's dream (2013-10-16 16:51)

Healthcare.gov proves why Linux is inferior to FreeBSD or openBSD, period. The healthcare.gov running Red Hat Enterprise Linux and it is a hacker's dream.

US needs new consoles sooner than later (2013-10-17 00:07)

US retail sales of video games have not been good at all this year, with monthly declines regularly in the double digits. In an NPD data preview note, Wedbush Securities analyst Michael Pachter said that September's results (to be published this Thursday) won't be much better and that the industry really needs new consoles from Microsoft and Sony to push sales into positive territory again. Even big software this holiday (Halo, Call of Duty, etc.) and the launch of the Wii U won't be enough to really reverse the damage done throughout the year. "We expect October - December to be relatively flat, and expect a return to negative territory again next year, at least until the launch of a next-generation console from Microsoft or Sony," Pachter said. He continued, "A new console cycle is likely to reverse the negative sales trends of the last several years, with next-generation consoles expected from each of the three manufacturers over the next 18 months. Nintendo will launch the Wii U on November 18, and, while neither Sony nor Microsoft has yet announced new hardware, we expect a PS4 no later than November 2013, and a next Xbox no later than March 2014." "Competition from social and mobile games hurt packaged goods sales over the last three years, but should serve to expand the market for console games over the long run, although it appears that the

addressable market for handheld games will continue to erode. We expect the publishers to address the "problem" of free online multiplayer with evolving business models, adding increased opportunities to purchase virtual items, creating subscription-only serialized content, and adding premium subscription layers to the free offerings currently provided." Ultimately, Pachter sees the next-gen consoles selling very quickly even if they are only a "modest improvement" over the current generation. He believes publishers are all planning big lineups for new systems from Microsoft and Sony, and that these games will help bring software sales back to prominence. "We believe that the publishers plan an unprecedented number of new games for launch in the first two years of the next generation, providing relief from the gamer fatigue we've seen over the last three years," he said.

(2013-10-17 00:09)

There is nothing of DLC that I really need. DLC is a waste of money. PC Expansion packs are more worth it like RPGs Nightwinter Nights, Neverwinter Nights 2, Diablo 2, Elder Scrolls III, Elder Scrolls IV and first person shooters like Half-life 2, These expansion packs offered more for the money and they came in a box!

Now expansion packs are changed to DLC and are on consoles. I am not buying an DLC for consoles, because I don't rebuy games with DLC content nor do I own expansion packs for console. I don't know if PC is niche like Sega Saturn or Dreamcast.

This DLC is moron. I do not buy the same game across two console platforms. That's moron. Who has that kind of money? I normally buy one version for PC and then one version for console without PC expansion packs.

I think I have enough PC games. Guild Wars 2 might be my last PC game for at least 24 months. I have no idea what is happening for PC. I know Nvidia and Radeon release new GPUs like clockwork and then new PC games use 5 year old game engines. I don't know if PC is dead or why there aren't many DirectX 11 games? Maybe next gen will solve the DirectX 11 void on PC???

They didn't wipe PC games off Wal-Mart or Target or Best Buy so PC is not yet Commodore Amiga.

Mighty Morphin Power Rangers Commentary Youtube Channel. (2013-10-17 01:38)

I bought the two boxsets of Mighty Morphin Power Rangers and Seasons 4-7. Now there is a channel with commentary on Power Rangers. Seasons 8-11 come out this month.

Oddly, the channel got 400,000 views in only 4 months! I have Mighty Morphin Power Rangers to make my flickr popular. I would do a commentary, but I just watch the boxsets alone on my Playstation 4. I thought it was funny to see the red ranger on Facebook in October. Red Ranger is funnier than Super Mario Bros costumes.

Game Industry Predictions (PS4, Xbox One, Playstation Vita, Wii U, 3DS) (2013-10-27 21:41)

The Kinect will win over the casual crowd and be fundamental to Xbox One's success

The first Kinect was a great concept but a flawed final product that lacked decent software. However, the market for it was there and it sold like hot cakes, so I'm thoroughly expecting the improved Kinect 2.0 (which is bundled with the Xbox One) to prove itself as a big selling point for the coveted "casual" audience.

While I'm personally not excited by the prospect of controlling my video games by flailing my arms around, as Nintendo have now moved towards a more traditional controller setup with the dual analog sticks of the GamePad, I'm predicting that the Xbox One will top many a kids' Christmas list in 2014 when Microsoft has rolled out a few more motion-controlled titles.

PlayStation 4 will trounce the Xbox One across holiday period

After the PR disaster that was the Xbox One's unveiling, I predict that the PlayStation 4 will shift the most units across the holiday period by a wide margin. Sony is simply offering the most enticing package, with its console being more affordable and marketed much more proficiently than its rival.

Wii U bundles without the GamePad

I love the GamePad. Considering its size it fits nicely in your hands, in the few games that have incorporated it into their gameplay it has worked magnificently and it offers a wonderful combination of console and tablet gaming.

Unfortunately, it is being underutilised, and this has led many to question its significance. While I would love for Nintendo to convert the non-believers, with their next three big first-party games seemingly failing to use it any notable way, I'm wondering whether the console manufacturer may start to release bundles that replace it with the Pro Controller, instead selling the GamePad separately with games that require it such as Wii Party U.

Microsoft will win ground back from Sony in the long run.

While I believe Sony will win the holiday 2013 battle, Microsoft has a good chance of winning the war. We've all praised Sony for its courting of indie developers and the like, but Microsoft is making a beeline for that most profitable of markets: the bro.

Thus far, Microsoft's pushing of sports to the forefront of the Xbox One's priorities has been a curious business decision, but it is indicative of the demographic they are looking to appeal to. That demographic, the one that will attend a midnight launch of a Call of Duty game and spend an obscene amount of money on Ultimate Team packs on FIFA, is an extremely profitable one which Microsoft also had a firm hold of in the current console generation.

The Titanfall series will dethrone Call of Duty

Many are becoming tired of the Call of Duty franchise, with the fewer pre-sales of Ghosts indicative of this, and while Battlefield 4 looks great that series' focus on more strategic gameplay has always stood to alienate those who prefer their action more fast-paced and, let's face it, dumb.

Fortunately, from the looks of the various previews and gameplays demos we have seen of it, Titanfall looks to bridge that gap. I believe that by the time we see the inevitable Titanfall 2, which unlike its predecessor will no doubt be released on the Xbox One, PC and PS4 simultaneously, we could actually have a CoD-killer on our hands.

Bayonetta 2 will flop

The announcement that Bayonetta 2 would be arriving exclusively on the Wii U divided opinion. Nintendo fans loved the fact that developer Platinum Games was showing such support to the new console, while fans of the original Bayonetta who weren't planning on picking up the Wii U were understandably more than a little frustrated.

I personally believe that Bayonetta 2 should absolutely have been a multiplatform title, and I think the fact that it will be releasing solely on the Wii U will prove to be its unfortunate undoing. Even though I'm of the opinion that 2014 will see Nintendo change the public's opinion of the Wii U, I simply don't think that owners of the console are Bayonetta 2's target audience and, as was the case with Platinum's The Wonderful 101, its lack of sales will reflect this.

Mario Kart 8 and Super Smash Bros. U will turn around the Wii U's fortunes.

Much in the same way that the two-hit combo of Super Mario 3D Land and Mario Kart 7 improved the 3DS's fortunes, I believe that when Mario Kart 8 and Super Smash Bros. U release next year they will prove to be system sellers for Nintendo's console.

Nintendo has struggled to gain a foothold on the market in the Wii U's first year on sale, but with the big hitters out

of that starting gate they have a great chance of converting many more to the console's cause.

Quantic Dream will start developing for Xbox One

Beyond: Two Souls has been receiving mixed reviews, with many still not seeing the appeal of Quantic Dream's "interactive movie" style of game design. But while David Cage and his crew are already planning a game for the PS4, I wouldn't be surprised if they eventually take their talents over to Microsoft.

Microsoft's strong push of the Xbox One as a multimedia centre that will attract sports, TV and film fans as much as it will people who just want to play video games would surely be a perfect fit for Quantic Dream's vision, even if they have made their allegiance to Sony abundantly clear.

Quantic even released an app that allowed Beyond to be controlled by smartphone for people unfamiliar with the dual analog setup which, considering Microsoft's continued push of Xbox Smartglass, would just make sense.

Xbox Fitness will (unfortunately) be a huge hit

Wii Fit proved to be a monstrous success for Nintendo, and Microsoft is looking to jump on that bandwagon with Xbox Fitness. The app will be included with Xbox Live Gold memberships until December 2014, with it then becoming a paid service.

While I personally prefer to do my exercising outdoors rather than sweating in front of my TV, I think this will prove to be huge for Microsoft, and if they keep that subscription fee low enough and frequently update it with new workout videos, it could see the Xbox One worming its way into the living rooms of people who are uninterested in video games, similar to the impact Wii Fit had on the Wii.

PlayStation Plus will offer up top PS3 titles for free

Sony has already announced that PS3 games will be streamed to the PS4 and Vita via the cloud gaming network Gaikai, but that will inevitably come at a price - a price that those who already owned the games will probably be unwilling to pay.

The PlayStation Plus service has offered subscribers a fantastic array of free games over the years, and this trend will likely continue with the PS4. However, seeing as how the PS4's library won't be large enough for this to be the case in its first couple of years on the market, I'm predicting that the PS3's best games will be made available for free to Plus subscribers.

Rare will bring back a few of their most popular series as Kinect games

Rare used to be everybody's favourite third-party developer. Creators of Banjo-Kazooie, GoldenEye 007 and Conker's Bad Fur Day, there was a time when it looked like the company could do no wrong. Now is not that time.

Since 2010, Rare's main focus has been on developing Kinect titles, the derivative Kinect Sports being chief among them. The company will continue its focus on motion-controlled titles with the Xbox One, too, but seeing as how every owner of the console will mandatorily own a Kinect, there's a chance that we could see Rare undergo a revival of sorts and bring back Banjo and the crew to entice those of us who have been begging for their return to take on chance on purchasing a Kinect game or two.

The PS4 will revive the Vita

The PS Vita's a great handheld console but is simply lacking the games. Fortunately, Sony hasn't given up on it, and are really pushing the connectivity between it and the PlayStation 4, along with unveiling a whole bunch of great looking new titles for the near future. I'm predicting that the PS4 will inject some life into the Vita and a whole bunch of people will finally be introduced to the considerable charm of Persona 4.

We'll get a great Wii U Pokemon game, but it won't be the RPG we're all hoping for

Nintendo won't allow developer Game Freak to release a Pokemon RPG on the Wii U, because doing so would have a negative impact on the series' hugely successful portable games.

However, I think we'll definitely see a Pokemon game make its way to the Wii U, with the smart money being on either a beat-em-up or a Skylanders-esque platformer complete with tons of expensive figurines for fans to collect.

The PlayStation Eye will become completely obsolete

The PlayStation Eye was removed from the PlayStation 4 bundle to lower its price point, and I have no doubt that this will render its use completely obsolete save for its implementation in a handful of games, similar to the PS3's Eye.

Downloadable multiplayer-only titles will become the next big thing

Titanfall is an online multiplayer-only title, but that little fact hasn't prevented it from becoming one of the most heavily anticipated next-gen titles. This marks a huge change in the public's perception of multiplayer-only games, as

they have thus far only found notable success on the PC, and could mean that we'll see smaller studios incapable of devoting enough time to the creation of a single-player and a multiplayer mode still being able to find considerable success.

The Kinect will win over the casual crowd and be fundamental to Xbox One's success

The first Kinect was a great concept but a flawed final product that lacked decent software. However, the market for it was there and it sold like hot cakes, so I'm thoroughly expecting the improved Kinect 2.0 (which is bundled with the Xbox One) to prove itself as a big selling point for the coveted "casual" audience.

While I'm personally not excited by the prospect of controlling my video games by flailing my arms around, as Nintendo have now moved towards a more traditional controller setup with the dual analog sticks of the GamePad, I'm predicting that the Xbox One will top many a kids' Christmas list in 2014 when Microsoft has rolled out a few more motion-controlled titles.

Rare will bring back a few of their most popular series as Kinect games

Rare used to be everybody's favourite third-party developer. Creators of Banjo-Kazooie, GoldenEye 007 and Conker's Bad Fur Day, there was a time when it looked like the company could do no wrong. Now is not that time.

Since 2010, Rare's main focus has been on developing Kinect titles, the derivative Kinect Sports being chief among them. The company will continue its focus on motion-controlled titles with the Xbox One, too, but seeing as how every owner of the console will mandatorily own a Kinect, there's a chance that we could see Rare undergo a revival of sorts and bring back Banjo and the crew to entice those of us who have been begging for their return to take on chance on purchasing a Kinect game or two.

The PS4 will revive the Vita

The PS Vita's a great handheld console but is simply lacking the games. Fortunately, Sony hasn't given up on it, and are really pushing the connectivity between it and the PlayStation 4, along with unveiling a whole bunch of great looking new titles for the near future. I'm predicting that the PS4 will inject some life into the Vita and a whole bunch of people will finally be introduced to the considerable charm of Persona 4.

We'll get a great Wii U Pokemon game, but it won't be the RPG we're all hoping for

Nintendo won't allow developer Game Freak to release a Pokemon RPG on the Wii U, because doing so would have a negative impact on the series' hugely successful portable games.

However, I think we'll definitely see a Pokemon game make its way to the Wii U, with the smart money being on either a beat-em-up or a Skylanders-esque platformer complete with tons of expensive figurines for fans to collect.

The PlayStation Eye will become completely obsolete

The PlayStation Eye was removed from the PlayStation 4 bundle to lower its price point, and I have no doubt that this will render its use completely obsolete save for its implementation in a handful of games, similar to the PS3's Eye.

Downloadable multiplayer-only titles will become the next big thing

Titanfall is an online multiplayer-only title, but that little fact hasn't prevented it from becoming one of the most

heavily anticipated next-gen titles. This marks a huge change in the public's perception of multiplayer-only games, as they have thus far only found notable success on the PC, and could mean that we'll see smaller studios incapable of devoting enough time to the creation of a single-player and a multiplayer mode still being able to find considerable success.

The Kinect will win over the casual crowd and be fundamental to Xbox One's success

The first Kinect was a great concept but a flawed final product that lacked decent software. However, the market for it was there and it sold like hot cakes, so I'm thoroughly expecting the improved Kinect 2.0 (which is bundled with the Xbox One) to prove itself as a big selling point for the coveted "casual" audience.

While I'm personally not excited by the prospect of controlling my video games by flailing my arms around, as Nintendo have now moved towards a more traditional controller setup with the dual analog sticks of the GamePad, I'm predicting that the Xbox One will top many a kids' Christmas list in 2014 when Microsoft has rolled out a few more motion-controlled titles.

PlayStation 4 will trounce the Xbox One across holiday period

After the PR disaster that was the Xbox One's unveiling, I predict that the PlayStation 4 will shift the most units across the holiday period by a wide margin. Sony is simply offering the most enticing package, with its console being more affordable and marketed much more proficiently than its rival.

Mario Kart 8 and Super Smash Bros. U will turn around the Wii U's fortunes.

Much in the same way that the two-hit combo of Super Mario 3D Land and Mario Kart 7 improved the 3DS's fortunes, I believe that when Mario Kart 8 and Super Smash Bros. U release next year they will prove to be system sellers for Nintendo's console.

Nintendo has struggled to gain a foothold on the market in the Wii U's first year on sale, but with the big hitters out of that starting gate they have a great chance of converting many more to the console's cause.

Quantic Dream will start developing for Xbox One

Beyond: Two Souls has been receiving mixed reviews, with many still not seeing the appeal of Quantic Dream's "interactive movie" style of game design. But while David Cage and his crew are already planning a game for the PS4, I wouldn't be surprised if they eventually take their talents over to Microsoft.

Microsoft's strong push of the Xbox One as a multimedia centre that will attract sports, TV and film fans as much as it will people who just want to play video games would surely be a perfect fit for Quantic Dream's vision, even if they have made their allegiance to Sony abundantly clear.

Quantic even released an app that allowed Beyond to be controlled by smartphone for people unfamiliar with the dual analog setup which, considering Microsoft's continued push of Xbox Smartglass, would just make sense.

Xbox Fitness will (unfortunately) be a huge hit

Wii Fit proved to be a monstrous success for Nintendo, and Microsoft is looking to jump on that bandwagon with Xbox Fitness. The app will be included with Xbox Live Gold memberships until December 2014, with it then becoming a paid service.

While I personally prefer to do my exercising outdoors rather than sweating in front of my TV, I think this will prove to be huge for Microsoft, and if they keep that subscription fee low enough and frequently update it with new workout videos, it could see the Xbox One worming its way into the living rooms of people who are uninterested in video games, similar to the impact Wii Fit had on the Wii.

PlayStation Plus will offer up top PS3 titles for free

Sony has already announced that PS3 games will be streamed to the PS4 and Vita via the cloud gaming network Gaikai, but that will inevitably come at a price - a price that those who already owned the games will probably be unwilling to pay.

The PlayStation Plus service has offered subscribers a fantastic array of free games over the years, and this trend will likely continue with the PS4. However, seeing as how the PS4's library won't be large enough for this to be the case in its first couple of years on the market, I'm predicting that the PS3's best games will be made available for free to Plus subscribers.

Rare will bring back a few of their most popular series as Kinect games

Rare used to be everybody's favourite third-party developer. Creators of Banjo-Kazooie, GoldenEye 007 and Conker's Bad Fur Day, there was a time when it looked like the company could do no wrong. Now is not that time.

Since 2010, Rare's main focus has been on developing Kinect titles, the derivative Kinect Sports being chief among them. The company will continue its focus on motion-controlled titles with the Xbox One, too, but seeing as how every owner of the console will mandatorily own a Kinect, there's a chance that we could see Rare undergo a revival of sorts and bring back Banjo and the crew to entice those of us who have been begging for their return to take on chance on purchasing a Kinect game or two.

The PS4 will revive the Vita

The PS Vita's a great handheld console but is simply lacking the games. Videogames are more popular then Comic Books (2013-10-28 20:53)

Whoa, whoa – video games are an art form now? Well, here's the thing: The first rule of art is "art is subjective," and the second rule of art is "ART IS SUBJECTIVE" (the third rule: "If this is your first day at art club, you have to art"), and thus the tiresome argument that video games aren't art is rather moot indeed. Oh, and video games are an output of drawings, writing, and music put together by skilled humans in a manner designed to entertain/enliven, so there's that, too.

So with that out of the way, being on the verge of a new console generation feels like a good time to file something of a progress report on the art form in question (if only to desperately justify those 147 hours I poured into *Saints Row: The Third*). So what the hell can games do that books and interpretive dance can't?

#5. They Can Make You Think Like Someone Else

In a bad video game, you'll tend to refer to your onscreen character as "him" (or, rarely, "her") – "Look at him fight that giant crab," etc. But a more engrossing game inevitably has you referring to your exploits in the first person – "I'm sorry, I can't join you for 11 hours of tantric sex right now, I have to kill this giant crab" – and this is because games can put you in the boots of someone else, to the point where you might find yourself kinda sorta *thinking* like someone else. Psychologists have long detailed this phenomenon where you'll behave according

to what your perceived role in life is, and it's games' ability to harness this in a fun/harmless way that's perhaps unique.

As an example, the *Mass Effect* trilogy of games (does 2.9 games count as a trilogy?) has a romantic side quest for the main character, and playing as the other gender and then finding yourself genuinely evaluating potential romantic matches from their perspective ("YOU SHALL BRING ME THE BIGGEST HUNK ON THE SHIP") is an experience you can't really get unless the medium is actively telling you to take on another role. A game that more completely focused on all this could be sociologically fascinating indeed (or at least spread appreciation of hunks).

#4. They Can Do What Existing Art Forms Can Do, Only More So

What makes a good painting? Arguably you'd distinguish a work of intrigue from a mere illustration by the presence of mystery, or if someone painted boobs on it. Thoughtfulness and ambiguity in an image are the starting point, and the audience's imagination completes the process that we call art. Thus, paintings are cool. But video games can take all this and extend it to the third dimension.

There's an unusually thoughtful and ambiguous game from Japan called *Dark Souls* that places you in a strange and beautiful undead land with little real direction as to your quest. You'll meet a number of characters, but the narrative and exposition are deliberately kept minimal to foster endless discussion (the game's director loved the process of making up his own stories when reading English fantasy novels as a child and attempted to translate that experience to the video game medium). The game succeeds as a piece of art because the obvious amount of thought and detail that have gone into it subconsciously tell the audience that it's worth their time to try and fill in its many blanks.

You're not told everything, just like you're not told what the hell *The Scream* is screaming about, only here you've got an added plane of depth, and this is what's known as "taking it up a notch." About halfway through *Dark Souls*, you encounter a five-story-high painting in a massive, eerie hall. As you approach, some strange force seizes you, pulling you into the painting, leaving you to wander interestedly around the mysterious world within. This is what's known as "literally the most convenient metaphor ever."

#3. They Let You Step Outside the Narrative

The movie *Minority Report* had some good ideas about the future, but whatever was in there was always gonna be mitigated by the fact that a movie gets made because a star gets attached to it, and thus it's the star you're stuck looking at 95 percent of the time. Maybe the movie *Prometheus* had some good ideas, too, but who the hell knows because the audience was hurtling by them lashed to a mindless, rampaging narrative. The point here is that a linear experience means the audience is largely beholden to whatever the camera is pointed at. It's a big deal that in video games you control the camera.

What makes a world feel real is the little things – the overheard conversations, the emails, the informative brochures. This is particularly important with science fiction, which generally seeks to present a convincing vision of another reality. A game like 2011's *Deus Ex: Human Revolution* presents a complete picture of a world where human augmentation is a reality because you get to hear those conversations and read those emails and brochures – you simply spend more time in the world than you ever could with a movie (*Prometheus* only seemed like it was eight goddamned hours long).

Sure, you have your mission, but you can easily just say screw it and go around breaking into people's apartments, and when you stumble onto the apartment with the clandestine human chop shop, bags of artificial eyes and arms littered about, alarming emails on the computer, you realize this is the kind of extraneous depth that makes shit actually feel plausible. Being able to park the narrative for a bit and wander off to take in the details is uniquely immersive, and anyone interested in speculative fiction would do well to go "Hmm ..." at this point.

#2. They Can Trick You into Learning Something About Yourself

The worst I've ever felt about myself was the time I let that dude fall to his death from a bell tower when I so easily could have pulled him to safety. I found out something about myself that day – I was willing to decide that someone I didn't like should die, and I was mad at that dead bastard, but I was infinitely madder at myself. Fortunately, most of this took place in a video game (2012's *The Walking Dead*), and it's a prime example of something games can do but passive media cannot: They can set you up to do things you assumed you weren't capable of, in a manner typically reserved for evenings at Stanley Milgram's place. A novel or film can show you someone else's descent into oblivion, but it can't make *you* do evil.

The Lessons Learned

What I recall from the same story in 3 different mediums

- Colonialism is bad
- like really, really bad
- it's hot near the equator
- there will probably be a big war in the early to mid 20th century (this was useful to know)

- Marlon Brando was too fat and/or crazy to not film in total darkness
- Harrison Ford looks really unrecognizable in glasses (yeah, he was in the movie! I know, right?)
- That one classical music song goes really well with helicopters or whatever
- I think that's it. I dunno, I only saw it the one time

- I AM NOW COMPROMISED. THE DETAILS WOULD ONLY SCARE YOU. ALL I HAD TO DO WAS WALK AWAY. NEVER WAS THE EXIT CLOSED, BUT GOD HELP ME I WANTED TO SEE WHAT WOULD HAPPEN. THIS KNOWLEDGE HAS COME TO CONSUME ME. WHAT OTHER EVILS HAVE I BORNE ALOFT PURELY FROM AN UNQUESTIONED DESIRE TO "SEE THINGS THROUGH?" WHAT ELSE HAVE I BLINDLY JUSTIFIED?? THIS IS THE

LAST SORRY DISPATCH OF A RUINED SOUL.
LET MY CARCASS BE A SCARECROW.
LET IT WARN OTHERS THAT THESE
FIELDS ARE FALLOW, THAT ONLY A
DEAFENING BLEAKNESS GROWS HERE, THAT THIS
IS THE LAND OF THE EMPTY, WHERE THOSE WHO ASSUMED
GLORY WAS THEIR BIRTHRIGHT SHUFFLE FOR ETERNITY—
THEIR AGONY IS SILENT, THEIR
PHOSPHOROUS TEARS BURN, OH GOD,
MOTHER, HOW THEY BURN!

- also, the Black Angels have some really good songs

Recently in games there's a mini-trend of examining traditional game protagonists and the way they unquestioningly scythe down waves of enemies because the back of the box says they're The Hero. 2012's *Spec Ops: The Line* directly confronts this with chilling consequences for the psyche (how to play *Spec Ops: The Line*, Step 1: Return game to store); *The Walking Dead* tests the limits of how far you would go to protect one implausibly cute kid (pretty far, it turns out); and even *Dark Souls* is a game where half the enemies you face inevitably turn out to have some heart-breakingly noble reason for trying to dismember you (you who have unknowingly wrought so much evil because you assumed you were the hero of the game). Why is all this worth it? Because evil starts from assuming that you can do no wrong, and games genuinely have the potential to remind us that we can and will do evil if we're first told how good we are. Plus games keep you off the streets, killing virtual giant crabs instead of real ones, and that's the way to be.

#1. They Can Actually Attract an Audience

In the damn-near-impossible-to-make-a-living/impact world of the arts, you often have to go where the audience

is, and that's the biggest advantage of video games right now. Like it or not, that's definitely where the audience is. Even entry-level indie games can get attention not available to other mediums. 2011's low-tech *To the Moon* is basically a short story infused with a frankly microscopic amount of gameplay, but it's a good short story, and it's one that thousands of people would never have read if it hadn't been in game form.

That might sound unfair, but every medium exists merely to fill the unending need for entertainment and stories, and games are in right now (have faith, erotic limerick writers, your time will come again). Most games are not 3D paintings. Artistically speaking, the majority of video games don't do anything better than a brick, let alone literature or HBO, but most of them are at least fun, and some are legitimately beginning to demonstrate games' unique potential to be equally fun AND thought-provoking (heaven forbid). An actual diversity of voices, attracted by this potential, is maybe all that's needed to take things further. And then 30 years from now when games come full circle and become what Hollywood is now, we'll at least have a golden age to look back on wistfully.

Finally Got PC-BSD 9.2 (2013-10-29 00:55)

FreeBSD with KDE 4.10.5 is here! I know FreeBSD isn't Linux Mint, but it is KDE 4.10.5.

BSD is often seen as Linux's scarier cousin. Its name is mentioned in hushed tones and its users are thought of as elite programmers and über sysadmins. However, when we went to the PC-BSD website to download the latest ISO, we saw the main screenshot featured Facebook and a YouTube video of funny cats. Not exactly leet browsing material. Perhaps it is for mere mortals after all. PC-BSD aims to be user-friendly, like a BSD equivalent of Linux Mint. Of course, BSDs aren't like Linux distros because they don't all share kernel – though their features are broadly similar, the main projects all maintain their own. You could perhaps think of PC-BSD, though, as a distro of FreeBSD. Installation couldn't have been easier: just select Desktop or Server and set it to work. Once it's done, the

system walks you through creating a user and you're done. Frankly, a few popular Linux distros could learn a thing or two about user-friendly installation

"PC-BSD aims to be user-friendly, like a BSD version of Linux Mint."

from PC-BSD. The install gives you a KDE desktop, though other environments are available. The only slight blip was a warning message telling us that we had less than 50GB of hard drive space. This seemed a little excessive, given that the install only took up 7.2GB, and a message like this might cause people to worry that the install will fail. We ignored the warning and it worked fine on our 20GB disk.

If it weren't for the logo on the desktop, many Linux users wouldn't realise they weren't using a penguin-flavoured OS. The range of apps installed by default seems a little light, though, considering the 3.4GB download. There's no office suite, Konqueror is the only web browser, and there's little else of interest – you have to install everything you need.

PC-BSD comes with the famous ports package management system, It may carry the cute exterior of KDE (pun intended), but underneath beats the heart of a BSD.

but GUI-loving users needn't be afraid.

There's also AppCafe which is a fully graphical software installation that's one of the best we've come across.

There's only about 1,100 apps here – we say only because there's almost 70,000 on the Ubuntu Software Centre – but you should find software for most common tasks. There were a few surprises, like Apache OpenOffice instead of the more popular LibreOffice (or even Calligra Suite given the OS's predilection for KDE). As we said, there's software to suit most tasks, but you don't have as much choice as you may be used to. You still have the option of installing open source software the old fashioned way, and most Linux

software should compile on BSD.

On files

For years, the biggest difference between BSD and Linux has been the way they deal with filesystems. BSD's ZFS has long been the envy of Linux sysadmins. This version of PC-BSD comes with lpresnap which simplifies the process of taking ZFS snapshots, though at the moment it's only available on the command line. A graphical version is promised for the next version. ZFS now works on Linux, and BTRFS is also starting to be used, so the www.tuxradar.com

technical gap between the two systems is closing. At the same time, though, some of the BSDs (especially PC-BSD) have become easier to use, closing the game on Linux in that respect. Unless you have an ideological preference for the BSD licence over the GPL, it's hard to give you a specific reason to give BSD a try – but we highly recommend that you take it for a spin anyway. Not because of any great technical difference, but because it gives you another view of a free Unix-like OS – and it's easy enough to whip up in a virtual machine or on a spare computer

Nikon D7000 is still #1 on Flickr. (2013-10-31 20:39)

My 2012 Christmas present is still #1 on Flickr. I posted 20 new videogame reviews. The reason why Nikon D7000 remains the most popular, because it is the cheapest metal skeleton DSLR on the market. You still get 24 fps 1080p video. HDR can be made in Paintshop Pro X5 (owns). HDR makes the photo look fake. I've seen non-HDR photos on Flickr from the D7000 with 20,000 hits. Its all in those \$1000 lens, not HDR.

250,000 views today!

now i can pay for ps4 (2013-11-03 23:02)

I got \$300 for my birthday so I have enough money for Playstation 4! I can buy Super Mario 3D World and PS4 games in December. I just bought Legend of Zelda Wind Waker HD and it is pretty fun. My theory is this FreeBSD 9 running on Playstation 4 will make it last for years. FreeBSD is a UNIX. Xbox One runs on Windows 8. If you think Windows 8 can trump a UNIX, think again! Who cares about Kinect in this recession/economy. I much rather buy a console that lasts for years. Sony teams up with Foxconn so I'm not worried about manufacturing errors. I love to buy used games as well, who wouldn't? I hate monthly fees and always on connections.

General Public License vs. BSD License (2013-11-14 18:35)

Gpl newspeak, <http://www.gnu.org/licenses/why-assign.html> all code contributors to FSF are obliged to sign over their copyright to RMS. Imagine the implication if Richard Stallman could have all copyright of everything assigned to him personally. He would then be able to target Christians and Israel by discouraging manufacturers from providing them with hardware that of necessity will use such copyrighted code. It is a false premise that some fair dispenser of GPL justice by a Robocop walks around enforcing the terms of the GPL on an equality basis: GPL enforcement is arbitrary by the copyright holder, and such license does not apply to the copyright holder such as FSF.

The Linux (GPL) copyright holders employed by Google, IBM and Redhat allows these employers to dictate the behavior of those that don't employ the majority of them such as Nvidia and the hacker brewing the next Facebook in his garage. By employing the Linux copyright holders Google was able to create the Android operating system and not release back the code modifications because the GPL restriction only applies to the licensees and not the copyright masters, whom Google effectively control by their monthly pay check. Therefore the Linux code base can only be implemented in such a way as dictated by the Linux copyright employers, such as Redhat litigating against a hacker for incorporating the Linux "mount"(GPL2) command in order to destroy his business, yet allow another party to use "mount" in closed source projects after paying Redhat lots of money because the GPL restriction in MySQL, Mount etc. does not apply to Oracle and Redhat the copyright holders. GPL allows Oracle, Google and Redhat to use highly motivated slave labor who are confusing their access to the source with Equality source like *implementation* of the source. Having merely access to the source code is like somebody who thinks that having access to Solar energy patents is the same as implementing the ideas.

There is no company listed on an exchange that could possibly be a commercial viability if they were to publish all their ideas. Of necessity a start-up or hacker will incorporate GPL code to facilitate his products or business without publishing everything. GPL allows copyright holders such as Google and Redhat to practice selective communism. Communism is the centralization of ideas and the regulation of their implementation. Socialism is the centralization of the means of production. The distinction between these two concepts is fuzzy today because we are in the information age, it differs from its more dichotomous meaning during the times of Lenin and Stalin. Today with advances in robotics anything can be produced decentralized, this is being prevented with copyright emulating the effect of [[patents] and outright patents of course. Centralizing ideas in the hands of copyright holders such as Redhat, Google and IBM enables them to use indirection and prevent decentralized manufacturing.

Using Microsoft as a lightning rod for hacker discontent, Eben Moglen and RMS have deceived coders to sterilize vast swaths of algorithmic abstractions such as mount, ping, tracer, ncurses into copyright holders, which in turn are employed by Google, IBM, Redhat, Oracle etc. allowing them to prevent the implementation of unsanctioned code by competitors to these monopolies using Churches thesis. Prof.Moglen is on the same level as a trade unionist socialist wanting "job creation" - <http://lwn.net/Articles/434318/>. There are over 67 software licenses and thousands of "job creators", fabricating different incantations of copyright restrictions on the populace - the legal profession creating jobs for themselves. BSD Equality source limits the scope for money making litigation by the legal profession.

GPL imposes restrictions on what you can and can't do with code, in such a way that the restriction only applies to the non-copyright holders and not for example Oracle, the copyright holder of MySQL. This enables Google, IBM, Redhat to 'Embrace, Extend, Extinguish' any would be competitor by either incorporating him as their indentured

servant working for a monthly salary for them or ruining him financially with bogus copyright lawsuits.

By employing the coders who locked up algorithmic abstractions in the Linux GPL code base, as influenced by Linus Torvalds, RMS and Eric Raymond, Google, IBM, Redhat are emulating the effect of a software patent because they have gained effective control of the algorithms using indirection.

Redhat's employment of the Linux copyright holders allows them to litigate against any company or garage hacker making money out of Linux by forcing them to reveal all their code, while not imposing such litigated restriction on those who pay them lots of money to them or become their indentured servant.

GPL and BSD Edit

<http://www.linuxjournal.com/article/5935> Explains how BSD allows ideas to remain free.

<http://www.shlomifish.org/philosophy/computers/open-source/gpl-bsd-and-suckers-ism/> Arguments as why BSD must be used and not GPL

GPL advocates have missed one of the key points that makes the BSD license do so much good for the world. The BSD license, by allowing people to use its code in commercial products, promotes commercial products following open standards.

The classic example is TCP/IP. There are a lot of commercial products out there using the Berkeley TCP/IP stack, and one of the big reasons for that is that it's cheaper than developing their own protocol stack or even buying one. The value we see from this is the network effect; that a device communicates using the Berkeley TCP/IP stack rather than Novell's IPX stack or Microsoft's networking stack benefits all of us, because we can much more easily communicate with it (even, perhaps, in ways that the author did not intend). Open standards are even more important to freedom for computer users than open source. (Having source code and patents documenting an idea is nice, but it's not much good if it doesn't permit you to interoperate with other platforms out there or implement the idea itself. Linux is popular because it talks to other computers.) Therefore, I'd say that the Berkeley license has done more than any other license to bring us to the state today where we have a lot of freedom in our computing choices. Freedom means the freedom not to share an idea based on derivative ideas. A company is free to tweak the TCP/IP protocol in a commercial product without having to release the derived code, with GPL they would be forced to release any derivation.

The VLC project copyright holders relicensed their GPL code as LGPL, in order to allow the widespread adoption of VLC by companies who are not going to release their code as GPL or BSD etc. But because the copyright was not vested in a single or few authors but in *everybody* who contributed code, each of them had to be contacted and had to give permission. In the <http://www.fsf.org> incessant cult-like repetition of 'free software' they don't point out to programmers to be careful as to who will eventually own the copyright. This is deliberate because once to many programmers have copyright under say GPL3 or GPL then just one or a few copyright holders could prevent the majority from relicensing to something more sensible such as BSD or LGPL.

There is not a single idea held by anyone that isn't somehow a derivative of another idea by somebody else. GPL advocates expect to be recognized for 'their' ideas, ideas which are most probably somebody else's who didn't seek recognition. GPL doesn't allow a user the freedom to do with the code whatever he wishes, but like copyright and

patents restricts its usage. A restriction isn't freedom, restricting the implementation of ideas leads to Unintended consequences, such as the inability to commercialize an idea.

If the TCP/IP was released under GPL it would have prevented Microsoft from adopting it. Forcing Microsoft to use their proprietary protocol by forbidding them to use TCP/IP out of spitefulness could have established the Microsoft networking stack as a de-facto standard like their Office suite is a standard, with catastrophic consequences for society as a whole. Many GPL advocates are over-estimating their own importance and the importance of the code they contribute. They have an undue desire for recognition on trivialities - Parkinson's Law of Triviality, also known as bikeshedding or the bicycle shed example. GPL is a restriction placed on the licensee by the copyright holder, with such restriction not applying to the licensor. Freedom means that a person has the right not to share his derived ideas, with GPL thousands of developers are forced to share their ideas with the copyright holder like <http://www.fsf.org>, who in turn get corrupted by "corporate sponsors" to only enforce the GPL restriction against the competitors of powerful companies who have carved up the economy between themselves. Linux Torvalds for example recently received a "reward" by fronting organization for these corporate sponsors, a bribe for somebody who presents himself as a messianic figure handing out his autograph, to encourage Torvalds to do as they please (this needs citations, Torvalds prevents Stallman from forcing GPL3 on the Linux kernel because GPL sues corporations who employ the Linux kernel developers, thus buying themselves immunity from GPL enforcement, while corrupting the FSF to engage in arbitrary GPL enforcement against their competitors.)

GPL license is like the restriction on derived ideas we have with HackPatents, patents documents the idea, but doesn't allow its implementation without permission.

Open source or Equality source ? Edit

"Open source" and RMS "free software" are not public domain. <http://www.linuxtoday.com/developer/1999-062802310NWSM> Nowhere does Raymond make the distinction between public domain and proprietary code. BSD, MSFT closed, GPL, GPL3 etc. is defined as proprietary code by copyright law. There is no such thing as "open source" or "free software" in terms of copyright law, these terms are weasel-worded lies. The proprietors are free to call their master/slave relationship anything they want such as "I am little teapot licence", "free software licence" or "open source licence", because copyright law allows them to do such. Any code acceptance by the FSF to their GCC compiler is done by the contributor signing over his copyright to the FSF. FSF remains the sole copyright holder. The copyright holders (there can be any number) of code under say GPL3 can licence such code in closed source (meaningless term?) projects without anybody knowing about it. Oracle for example are using the MySQL code base in their commercial products because they bought the copyright and do not have to publish their code as dictated by the GPL license, because the GPL license only applies to the licensees and not to Oracle, the sole copyright holder.

Linux Torvalds, RMS and FSF are attempting to legislate their version of atheist morality, their world view is the stimulus/response Skinner Markov process behaviorism, which Chomsky has shown with his universal innate grammar theories isn't correct. Torvalds, RMS and FSF views humans as Pavlovian pooches who must be made to yelp with a GPL cease and desist letter and thankfully wag their tails to their knowledge copyright holding commissars on being re-allowed to use such GPL copyrighted proprietary code.

All code in terms of copyright law is either proprietary or public domain, a fact that Eben Moglen from <http://www.fsf.org> tries his best to conceal. Only proprietary code can be licensed as GPL, BSD and Microsoft closed license or any other license by a proprietary copyright holder: GPL code is defined as proprietary code by copyright law, RMS is legally and factually incorrect to assert the converse. BSD clause-3 is an attempt by a proprietor to emulate public domain while avoiding liability for code implementation. Public domain is freedom. Copyright law defines something as either free or restricted (copyright). RMS, Linus Torvalds, Eric Raymond is using "freedom" or its dissimilar term "open source" as metaphor for dictated behavior as proprietors over the restrictees or licensees.

Meaningless terms Edit

RMS makes the distinction between "custom software" and "proprietary software" which is meaningless. Copyright law only defines something as public domain or proprietary.

Copyright on gcc compiler Edit

<http://www.fsf.org> as the copyright holder of gcc must practice their freedom speech: why don't the fsf.org make lets say 10,000 coders fellow copyright holders?

The GPL license on the gcc compiler applies only to the licensees (slaves) and not to Richard Stallman himself or Linus

Torvalds(masters). Eric s. Raymond regrets his initial support for GPL(this needs citations). Torvalds and RMS views open source code as philosophy, or pragmatic methodology where they as copyright holders of such open source code licenses(GPL) the code too thousands of code restrictees who must provide back their innovations to them, innovations they in turn can license in closed source projects but not allowing the restricted licensees to have the same rights as they have, since the GPL licensees working for free aren't the copyright holders. Using Newspeak they have deceived GPL coders into mistaking open source with Equality source: the terms under which the open source code is made open doesn't apply to the copyright holder, with Equality source the public domain is emulated. Linus Torvalds assures us his GPL licensing as a copyright holder is based on exchange: you release your code, and Torvalds in exchange will give more code back. But this is not an obligation on his part as licensor, many GPL copyright holders license their code in closed source projects for remuneration without anybody knowing about it.

The wikipedia commercial software , http://en.wikipedia.org/wiki/Proprietary_software , http://en.wikipedia.org/wiki/Free_software and http://en.wikipedia.org/wiki/Open_source obfuscations attempts to twist the legally defined dichotomy between public domain(free) and copyright(proprietary) as laid down by the courts. Every shred of information is either proprietary(restricted) or public domain(free, Equality source), which the Wikipedia articles don't make clear.

Redhat as single legal entity Edit

Redhat is sole copyright holder of their distribution because they employ coders with such coders not becoming associate copyright holders because under copyright law Redhat and its employees are considered a single entity. The Linux kernel itself has thousands of copyright holders, while Redhat figured out a scheme whereby they can leverage GPL code but still maintain copyright (not sure about this, it needs further research). IBM, Redhat, Google and other "corporate sponsors" of the Linux kernel programmers, employ these very same programmers and copyright holders. They have come to an agreement that between them no GPL enforcement will take place, Google's Android system uses Linux code without releasing back such modifications.

Confused? You should be, SCO Unix couldn't figure it out. They correctly asserted that you can't make money by giving everything away for free. What they could not grasp is that by using Churches thesis the illusion that Equality source is created under GPL.

RMS wishes that if only the governments of the world would copyright the alphabet and sign over the copyright to him, then he as global idea atheist dictator will show us how communism is really supposed to work .

RMS ,Torvalds and FSF have deceived both GPL and BSD proponents. For some reason even <http://www.freebsd.org> seems either unable or unwilling to clarify the difference between copyright and public domain. MSFT bought the TCP/IP stack from the BSD copyright holders for \$10mil. They did this to avoid having to give credit to the copyright holders as specified in the BSD license. If they used the TCP/IP stack as dictated by the license, then no payment to the owners of the BSD copyright would have been needed. The same type of exemption could have been made if TCP/IP was under GPL by the copyright holders. Both BSD and GPL proponents don't understand this legal fact in terms of copyright law.(Must all the copyright holders give permission?)

GPL is proprietary software Edit

GPL is a copyright proprietary license; without an author who owns the copyright it is meaningless. An owner of the copyright must be established in order to make the copyright enforceable and license under which he licenses the code. The only alternative to this under copyright law is the public domain which is emulated with Equality source and not open source . All licensing such as GPL, BSD etc. is subject to copyright law. Proprietary is the characteristic of a proprietor, by having the exclusive legal right, or exclusive title to something, an owner. Proprietary software is owned software, the owner of the code can license his master/slave relationship under the following terms:

I'm a little teapot license

GPL

BSD

coo-coo-clock license

Whether the licensing terms are meaninful or meaningless is irrelevant because copyright law allows the master to license as he wishes.

The FSF owns gcc through their copyright on the gcc compiler, they have retained exclusive legal rights to gcc. Red Hat is the copyright holder of Gluster and Oracle bought the copyright to MySQL. Red Hat, Oracle and FSF as licensors

of their proprietary software licensed their code to the licensee under the GPL license, the GPL restrictions only apply to the licensees and not the copyright holder. GPL regulates the behavior of software in a master/slave relationship, much like Microsoft regulates their users. Richard Stallman, FSF and Linux Torvalds in presenting themselves as messianic figures, have deceived GPL coders into believing that they are not in a master/slave licensor/licensee relationship with the copyright holder.

As proprietors of MySQL, Gluster and GCC they can initiate arbitrary legal action against companies while not targeting others. All derived code that the licensees provide back to Oracle(licensor) can be used by Oracle in closed source projects. FSF as copyright holder of gcc revoked the GPL license for the more restrictive GPLv3, forcing BSD unix forks to adopt the Clang compiler and get rid of all GPL code.

In a semantic smoke and mirrors exercise FSF have convinced the public that if code is under the GPL license then the licensor and licensee can use the code under the same terms. GPL only places an obligation on the licensee, not the licensor. Thus Red hat will litigate against anyone using its Gluster code in violation of the GPL as it sees fit while releasing closed source code to anyone as it sees fit. FSF and RSM usage of proprietary and free confuses this point. There are basically only two concepts: Proprietary and Public domain. The omission in the GPL propagandizing at <http://www.gnu.org> and <http://www.fsf.org> on the utilization of GCC as opposed to the Clang compiler is that FSF retains the copyright, which establishes them in a dominant position over the users(GPL licensees). This is not what freedom and equality means.

BSD license was created to prevent liability litigation over code released to the public domain(http://en.wikipedia.org/wiki/Public_domain_software). Most countries are subject to the http://en.wikipedia.org/wiki/Berne_Convention which defines that something is either proprietary or in the public domain. Only proprietary code can be released under a license such as BSD and GPL. This allowed for example the Pixhawk code licensed under BSD to be relicensed under LGPL when they merged with the <http://www.diydrones.com> project. RMS can't redefine the legal concept of Proprietary as the opposite of Public domain by using the terms free(GPL) and permissively free(BSD): something is either proprietary or public domain(free). What Stallman refers to as freedom under GPL is actually dictated behavior of the licensee by the licensor - http://onlamp.com/onlamp/2005/06/30/esr_interview.html

(Pending: BSD clause-3 seems to release copyright to public domain and thus once BSD it can't be relicensed to some other code ...don't know will get back to this...)

...Linux Format UK - December 2012 ..p.61.... the code is effectively held in common..... All are free to read, study and share it. As such, it's impossible for workers to be locked in by those above them in the class system, since at any time they can choose to put the means of production, the code to use for their own ends....

The code is held in common by which licensor and how many copyright(licensors) holders are there? Copyright law doesn't restrict the number of copyright holders. In the quote the "...held in common ..." it isn't made clear as to who these "commoners" are: they are the copyright holders, establishing a master/slave relationship with licensees using GPL, which by definition means they are above the licensees of GPL. Companies can't as the licensee of Red hat's Gluster(GPL) produce a product under their own terms, while Red hat can use their derived code under any terms such as releasing derived code under a closed product and not releasing the derived ideas back to the company again.

Redhat code acceptance policy Edit

I am not sure, but as I understand it if the Redhat GPL proprietor(owner) accepts code into their project by a person that is not an employee, then that person automatically obtains copyright. Redhat and its employees are considered a single legal entity under copyright law. Redhat will never allow therefore a non-employee to contribute code or only under a contract of not obtain shared copyright. Thus you have to become a paid slave of them, not able to run your business in order to commit back improvements. This is an important omission that RMS and Linus Torvalds makes when handing out their autographs. Therefore the entire code sharing experience that is supposed to take place in theory under GPL on an Equality source footing can by the copyright holder be dictated to be in a master/slave relationship.

Copyright law allows the licensor to license the code under any number of licenses and to instigate arbitrary legal action or no legal action against any licensee: this is not what "freedom" is supposed to be. Freedom only works released under the http://en.wikipedia.org/wiki/Public_domain_software. Only a copyright holder can release

something as <http://en.wikipedia.org/wiki/Copyleft> and revoke such license. Copyleft is a form of licensing that is used to maintain copyright conditions for the licensor while delegating reduced rights to the licensee while making the licensee believe he has the same rights, much like the pigs in Animal Farm thought they had equal rights.

(Pending: Socialism is the centralized means of production, Communism is the centralization of ideas or allowed behavior/ideas. Redhat would ideally want to have all copyright on all of Linux, this would enable them to use slave labor working for free while under the delusion that as licensees of GPL they are on an equal standing with the licensor.)

<http://www.gnu.org/philosophy/free-sw.html> "Free software" means software that respects users' freedom and community. Roughly, the users have the freedom to run, copy, distribute, study, change and improve the software. With these freedoms, the users (both individually and collectively) control the program and what it does for them....

Redhat on Linux in the Firescout UAV Edit

Redhat stated p.53 Linux format magazine Dec.2012: ".....It's kind of funny to see people say ".Ooh, Linux is in the Firescout". It's going to force cataclysmic changes in the GPL No! It's not a cataclysmic event, it's a contract...."

The "contract" he refers is the contract that copyright holders of Linux made with the US government. While the licensees of GPLm, not being copyright holders of Linux are in no position to do this. (...this section needs more citations and alternative views.....). It should be obvious that the military can't release their detailed software designs on the Firescout as the GPL dictates, but because the GPL doesn't apply to the Linux copyright holders(licensors) they made an exemption after being paid lots of money. The unfairness in this is that the GPL users of Linux Busybox can't pull the same stunt: where is their freedom to use Linux in violation of GPL. Why is the US government exempted but not Sony by the Busybox copyright holders? Vast swaths of the Linux kernel developers are employed by major companies such as Redhat and Google. As employees who have to eat at the end of the month, those Linux copyright holders not providing their permission to have GPL violated by strong actors have a very good incentive not to deny it either. Therefore by employing the copyright holders of Linux or paying their Linus Torvalds salary as an independent maintainer of Linux , Redhat is able to leverage Linux code in closed systems such as government military software, where the derivative work can't for obvious reasons be made public.

Church's Thesis Edit

This process of subverting the original ideals of RMS that everybody will be 'free' and have equal terms access is known as Church's Thesis(http://www.softpanorama.org/Copyright/License_archive/gpl.shtml #GPL %20and %20Corba) . RMS and the RIAA are on opposite sides of the freedom debate, but they do share one common enemy "Church's Thesis" <http://cs.fit.edu/~ryan/glossary.html>.

A direct result of Church's Thesis is that no matter what you're trying to do, there's always a way to do it with one more level of indirection, or one more after that, or one more after that, or There's always a way to cheat *any* system you have in place, so unless you're willing to take draconian measures that will make a lot of legitimate uses illegal, you'll just have to accept it.

An example of Church's thesis are pyramid investment schemes indirection by selling nutritional products as a cover for financial fraud. The actual goods themselves could have been purchased much cheaper or are purchased not because the consumer actually wants the product but because more people will be recruited into the scheme.

Redhat provides the US government with Linux services as the copyright holder(master), in a way that you as GPL(slave) licensee can't. They use legal tricks as the copyright holder to prevent the GPL deceived from providing the same services, they are an example of Church's Thesis: leverage the work of GPL licensees to make money in closed products , while making the licensee think(using the incessant chanting of 'freedom') they are on the same equality standing as the licensor.

Alphabet under public domain not copyright Edit

Pending: alphabet is under public domain. Ideally RMS and the FSF would like the letter @e@ to be under copyright held by the FSF. IF the FSF holds the copyright to the gcc compiler then why not give them the copyright on the entire alphabet? Then literally everything we do and say could be involved in FSF "platinum member corporate sponsored" litigation. It would allow the FSF to become a global idea superpower, able to target those their "corporate sponsors want targeted".

GPL and cloud computing Edit

http://www.softpanorama.org/Copyright/License_archive/gpl.shtml #GPL %20and %20Fair %20use The GPL does

NOT prevent corporate interests from exploiting your work with no remuneration to you. For example, if I can arrange my money-making scheme so that all your GPL'ed code is running on my server somewhere, and the clients are just accessing it over the web, guess what? I'm making money from your code, and I don't have to give it to anyone.

Client/server approaches can take a lot of the bite out of GPL. Look at TiVo. They are certainly benefiting greatly from Linux, but the guts of their stuff runs as an application, and so does not have to be GPL'ed. They take the regular Linux kernel, make a few mods (which they GPL), and then use it to run their proprietary application. And then there is component-based computing: COM on the Windows side, and CORBA everywhere else. GPL, which is fundamentally based on a dying model of how computer programs work, provides basically no protection then.

RMS uses 'freedom as metaphor for 'behavior'Edit

RMS uses freedom as a metaphor for behavior or dictated behavior. His FSF holds the copyright on the GCC compiler. The GPL doesn't change the ownership of a snippet of code. It only changes the terms under which others can use that code. The original author still retains the copyright to do whatever he wants with his code. (merge this section: The original author, who is the copy(right|left holder, can do whatever he pleases, including putting it into a proprietary system. Nobody ELSE can do that, and it's an important distinction. GPL is all about redistribution.)

(pending work this section in later: Oracle bought the mysql copyright, this allows them to take all GPL forks of mysql and release the innovations under their own proprietary databases. Thus the whole point of having people give back under GPL was defeated)

The original author can release the same code under multiple licenses. He could license it under all 67 licenses currently available. Lets presume an irrational actor from say Iran pinches off \$4bil in oil funds and employs 10000 coders all being promised that the code will be released as BSD, but because Iran is the copyright holder they instead release it under lets say 1200 licenses, thus sterilizing the code because it would tie up companies in endless litigation with the copyright holder.

Google is openly violating the GPL clause of Linux with its Android system by not releasing code back. If an injunction is obtained against Google, the only way they would be allowed to re-use Linux once they comply is all the hundreds of copyright holders on Linux give their permission: they will never all give such permission. (add busybox section later at another edit date)

pending: (this section needs citations) One option would be for the oil producing countries to assemble a war chest of \$10bil and bribe enough copyright holders of Linux to start enforcement action against Google and others violating GPL. It would be one means of sterilizing the Linux code base. The drafters of the GPL could not have known that major GPL projects important in the functioning of our economies would have hundreds or even thousands of copyright holders and that with enough oil money bribes they could wreck mayhem.

Stallman as GCC copyright holder wants the licensees to engage in a certain behavior. If such behavior meets his moral code he calls it freedom. Coders should only have the 'freedom' to engage in behavior as sanctioned by Stallman. Thus he Newspeaks 'restriction' into 'freedom'.

Both patents and copyright allows the licensor to license an idea to the licensee with specific terms that lays down the "behaviour" of the licensee. Under GPL which applies only to the licensee the behavior required of the licensee is to release all derivative works back to the licensor.

PENDING: Nobody can legally define what a derivative work is to begin with. (will come back to this later at another edit date of this page)

Since my behavior is outlined by the licensor I do not have the freedom to behave in a manner outside the terms of the copyright holder of GCC or a patent holder. RMS pulled an Orwellian Jedi doublethink mind trick by restricting my behavior to his MORAL code and deceived the wider Linux community to say that behaving in the manner he wants is Freedom. Read Animal Farm from George Orwell.

RMS deceived coders to say: Restriction is freedom! Much like the animals in animal farm chanted Slavery is freedom!. He pandered to communist resentment and people's desire to eliminate all class differences.

Lets be very clear about this: A restriction isn't a freedom. If there is any restriction about how one is allowed to develop an idea then it is George Orwell Newspeak to call such restriction a freedom.

GPL allows people with resentments to ensnare the rest of the world with it. They resent Steve Job's and Bill Gates being billionaires. In this state of resentment they want to use the GPL for assured mutual destruction, like

is happening with with environmental destruction of forests because 2000 idea restricting HackPatents are making patented commercial StirlingEngines unavailable to Africans.

Pending: place in section about Ogg Vorbis and theora under BSD in an attempt to get Microsoft to adopt the standard so that windows and linux can play the same files. Instead we have the defacto mp3 and Mpeg-4 standard under license restrictions. GPL proponents don't understand that if Linux can't communicate with Windows at all, then Linux will become utterly irrelevant. GPL prevents microsoft from adopting Linux code, thus preventing communication between them, establishing Windows as a defacto standard for applications.

Opensource newspeak Edit

Opensource is a form of newspeak to obfuscate that it actually mirrors the effect of a patent: access to the source code is provided by the copyright holder such as Redhat , but one is restricted in how it can be implemented - HackPatents. Redhat implements the code released back by the licensees in their own closed solutions. It is deceitful to call a restriction on the licensee a freedom. GPL advocates must sort out their terminology and use properly defined terms to reflect what they mean as defined in dictionary's. A licensor / licensee relationship isn't "freedom", it is a master/slave relationship.

(Pending: If the US government releases GPL code then nobody can implement closed solutions of it? What scheme is Redhat upto for them to leverage government code in closed solutions, while nobody else can)

http://en.wikipedia.org/wiki/BSD_license BSD licenses are a family of permissive free software licenses. The original license was used for the Berkeley Software Distribution (BSD), a Unix-like operating system after which it is named.

GPL is labeled free software while BSD is labeled permissive free which is Orwell Newspeak obfuscation. Something isn't either free or permissively free it is either restricted or free.

.... wishing to publish BSD-licensed software which relies upon separate programs using the more-restrictive GNU GPL....

Note the more-restrictive(GPL) from the article as opposed to permissive free. GPL is uses free and more-restrictive interchangeably. Restrictions leads to unintended consequences. Ideally there should be no restrictions on any idea whatsoever, no copyright ect. We would now have had a cheap cure for cancer available had it not been for the unintended consequences of idea restricting patents, GPL and copyright. Microsoft, Apple and GE are working the system, what has to change is the law. BSD developers and Stallman(GPL) agree that all copyright and patents must be disbanded. Since this isn't going to happen BSD takes the pragmatic view by realizing that commercial companies will provide code back since it is in their commercial interest to have a global pool of developer knowledge by people. GPL communism tries to take out its frustrations with the legal system on Microsoft, leading to http://en.wikipedia.org/wiki/Unintended_consequences

More recently, the law of unintended consequences has come to be used as an adage or idiomatic warning that an intervention in a complex system tends to create unanticipated and often undesirable outcomes.[7][8][9][10] Akin to Murphy's law, it is commonly used as a wry or humorous warning against the hubristic belief that humans can fully control the world around them.

Communists tried to regulate every facet of human interaction, restricting the freedoms of people and ideas. <https://www.youtube.com/watch?v=ZemhXvN2stE> &NR=1 &feature=endscreen states that Stallman started the free software movement, this is incorrect as the MIT BSD like license was available before his GPL restriction as an answer to copyright restriction. GPL forces users to provide code back to a government agency who released it as GPL , without the government agency having to release code back to the developers but still able to use the code internally and derive benefits from extending the code, since government agencies and corporations are considered a single legal entity or person by law. This defeats the whole expectation of GPL coders that entities would be forced to release modifications back to them or they wouldn't be able to use their ideas.

Theo Edit

<http://undeadly.org/cgi?action=article&sid=20070901041657>

GPL fans said the great problem we would face is that companies would take our BSD code, modify it, and not give back. Nope—the great problem we face is that people would wrap the GPL around our code, and lock us out in the same way that these supposed companies would lock us out. Just like the Linux community, we have many companies giving us code back, all the time. But once the code is GPL'd, we cannot get it back.

products Edit

Ironport, isilon, ncircle, netapp, netscaler, juniper, sandvine, pallisade, avid, nokia, vxworks, thomson , panasas, symmetricon

GPL and Google: the fine printEdit

Many GPL advocates are actually communists with the view that there shouldn't be any class differences and that nobody must make money of their ideas without them getting a cut.

Google is using GPL code internally, generating wealth with it and not releasing their code modifications. A communist using the GPL to fight the corprotism(which he confuses with the free market) don't understand that he is in anycase not deriving direct financial benefit. Many communists have spent months of their lives behind GPL code, which was then used by Google, without Google paying them a cent.

Thus rather use the BSD license and at least formalize what is taking place in reality. GPL is a form of communism that will not allow any idea to be commercialized. As a commercial company there must be derived ideas that Google can't release to the public domain. One can't expect a company to invest Billions of dollars in hardware to release a product and release detailed exact descriptions of what they did. Imagine that all commercial companies be forced to release their internal trade secrets and suppliers, it would prevent people from investing in the first place. <http://www.stallman.org/> logic is that Sasol must provide a DVD containing detailed blueprints on its implementation of the [http://en.wikipedia.org/wiki/Fischer %E2 %80 %93Tropsch _process](http://en.wikipedia.org/wiki/Fischer%E2%80%93Tropsch_process) petrol production process. Since this isn't going to happen like it isn't going to happen that Vodacom will suddenly allow free access to its 900Mhz spectrum we need to be realistic and rather implement the BSD pragmatic approach - [http://sasecurity.wikia.com/wiki/GPL _and _BSD #Help _Vodacom _rather](http://sasecurity.wikia.com/wiki/GPL_and_BSD#Help_Vodacom_rather)

BSD encourages but doesn't force companies to release back their derived ideas. Apple has done many code releases back to <http://www.freebsd.org> and many of the core BSD developers work for Apple. GPL advocates and anybody else were free to buy Apple stock and share in the companies wealth. Yahoo releases back code to the postgresql BSD, keeping their in-house modifications current with the main SQL fork, allowing them to employ postgresQL developers for proprietary coding. For Yahoo, Google, Sasol etc. to have a business case they must be able to use algorithmic abstractions documented by others, without publishing such modifications.

GPL thus penalizes those trying to sell electronic products using such GPL code, while Sasol uses GPL code internally to sell petrol, but Sasol can't be sued for selling an end product. In both cases an end product is being sold, in both cases GPL code is used to provide such product, yet only the electronic product is actually able to be targeted in litigation.

Telecom firms I explained under Crime and Bandwidth solution are legal firms with an antenna on their roof engaging in Rent seeking, recycling math algorithms on FpGa devices. GPL, Copyright and HackPatents holders and coders also are rent seekers, expecting money each time their ideas are used. This has resulted in an Aristocracy lording over indentured slaves, who don't have the money like Apple, IBM to patent ideas and aren't being allowed to setup their own businesses using patentend ideas.

This has partially resulted in 25 % of world GDP being concentrated in the hands of 200 companies. This is not a failure of capitalism or the freemarket but Newspeak obfuscation by the powerful mind control entities CNN, Fox news. etc. who don't want the public to understand this. The solution to this isn't more restrictions on ideas and their implementation, which is what the GPL license is.

GPL fragmented the Unix base Edit

GPL splintered the BSD freebsd Unix base(Ubuntu, Red hat etc), thousands of sharp minds are wasting their time building a better bike-shed, not able to incorporate the superior file management system under BSD(nuclear power plant). Red Hat used clever legal tricks to in effect leverage the work done by developers under GPL but not release back these innovations. They have made it clear to their paying clients that there will be some form of retribution if they release code to others. Red Hat worked out a scheme whereby they are making money of GPL code but not giving back some of these modifications. (this need citations, I have lost the article and will cite it once found again) [http://linuxfonts.narod.ru/why.linux.is.not.ready.for.the.desktop.current.h tml](http://linuxfonts.narod.ru/why.linux.is.not.ready.for.the.desktop.current.html) provides a list of Nvidia driver issues. The complexity of Linux is scaling out of control due to a fragmented developer base and design flaws. BSD is more centralized.

Problems stemming from the vast number of Linux distributions: No unified configuration system for computer settings, devices and system services. E.g. distro A sets up networking using these utilities, outputting certain settings

residing in certain file system locations, distro B sets up everything differently. This creates confusion for users.

Due to unstable Linux and constantly changing kernel APIs/ABIs Linux is ineffective for companies which cannot push their drivers upstream into the kernel for various reasons like their closedness (NVIDIA, ATI, Broadcom, etc.), or inability to control development or co-develop (VirtualBox/Oracle, VMWare/Workstation, etc.), or licensing issues (4Front Technologies/OSS).

"...There should be no reason why you can't take the last release that AMD made for that HD3200 and have it run perfectly on the latest distro and the fact that you stand here and admit that it doesn't work just shows what is wrong with linux in a nutshell...."

Too many devs tinkering with drivers, kernel and low level internals with not thinking through the effect this has on backwards compatibility. Backwards compatibility is required, because most software companies aren't going to pay a team of devs to constantly rebuild their products to cope with fragmented changes.

Shuttleworth could have done like Google did with Android and fork the thing away from the devs so that real stability and BSD style central management could be brought to bare instead of the cat herding we have now, but it was not to be.

Linux has beautiful UIs, and tons of software, but retailers won't touch the product if installing it on a system and 6 months later its broken its own drivers because decentralized dev's changed low level system files and disabled the retailer's customer WiFi or sound...(Add Pulse section later)

Gluster New speak Edit

<http://en.wikipedia.org/wiki/Newspeak>

<http://community.gluster.org/q/why-did-gluster-choose-gnu-gpl-agpl-instead-of-bsd-license/>

...BSD license allows proprietary derivatives and forks of Gluster software. GNU GPL and AGPL defends software freedom better than BSD license. We would like to ensure enhancements to Gluster software to be contributed back to the community...

Gluster not allowing their ideas to be used elsewhere without documenting such derived ideas is a restriction and specifically not a freedom. They are owned by Red-hat. Redhat is a corporate entity that retains the copyright on Gluster, there is no community held copyright on Gluster.

Copyright holder forks Tcpreplay into GPL Edit

Aaron Turner the copyright proprietor of Tcpreplay was the only person with the legal power to make a GPL license in addition to his existing BSD license. Only the copyright holder can do this, but this did not allow him to revoke the BSD, he merely forked the development away from the BSD branch, which could still continue to be used by developers. In his http://synfin.net/sock_stream/technology/code/tcpreplay/why-tcpreplay-went-gpl article the usual point of how this will guarantee our freedoms under equality terms is given. What he did not mention is that the GPL restriction can be revoked for those using his GPL fork after paying him lots of money, because the GPL restriction does not apply to the proprietor. If something has a proprietor, then in terms of copyright law it isn't free(public domain).

later Edit

<http://www.catb.org/esr/writings/cathedral-bazaar/>

Apple issues Edit

Steve Jobs stated Apples makes the best notebooks on the planet Which is true, but what he failed to mention is that this is because Apple patented key technologies that doesn't allow other hardware vendors to reproduce similar products. The solution is to disband HackPatents and copyright, not add additional patent like restrictions with the GPL license. We must not fight restrictions like HackPatents with an incantation of the same restriction - GPL.

kEdit

section on SSL allowing windows and linux to talk to one another.

Help Vodacom rather Edit

The cell companies are running a rent seeking scam. There are various responses to this:

1) Distributed denial of service attack by sprinkling thousands of FpGa devices with the 3G protocol stack in peoples gardens. This could lead to a severe backlash and is a resentful, angry option like GPL allows angry communists to live out their classless society fantasy, leading to unintended consequences. Any large scale uncontrollable attack on

the cell masts could lead to cell companies paying enough bribes to both the ANC and DA to change the constitution to provide Icas with real powers and completely shut down all wireless networks: be careful what you wish for. Trying to destroy the commercial viability of cell companies could backfire badly.

2) The pragmatic option, grasping the reality of the situation and adapting to it. Try and see the situation from Vodacom's perspective and reduce their cost of doing business by allowing them to install for free mini-cell towers(femto cells) on your roof and even interlinking them using the opensource Ronja FreeSpaceOptics.

By reducing Vodacom's cost of doing business and forming a partnership between communities everybody benefits, enabling Vodacom to reduce their prices and still make a profit and not enabling them to demonize freedom loving people who will use the spectrum on 700,600,400Mhz etc. Since their business is so entrenched in 900Mhz no unauthorized usage of this spectrum must take place: we will not extend the same principle to 400Mhz - Unlimited bandwidth

Their present cost structure involves setting up expensive large towers, they have to raise their prices to recoup their costs and provide a return on investment. The GPL communist mindset would object and say that this isn't fair, sure life isn't fair, GPL supporters wants to wait for a classless fair society before allowing their ideas to be used. We have a limited lifespan on this earth, by the time 'fairness' arrives all of those reading this will be long dead.

GPL newspeak Edit

http://en.wikipedia.org/wiki/Free_software

Free software, software libre or libre software is software that can be used, studied, and modified without restriction, and that can be copied and redistributed in modified or unmodified form either without restriction, or with restrictions that only ensure that further recipients have the same rights under which it was obtained and that manufacturers of consumer products incorporating free software provide the software as source code.

pending merge with issue on derived works by lawyer and programmer under the UNIX section.

Links Edit

<http://www.itworld.com/storage/295325/red-hats-new-patent-troll-weapon-gpl-violation>

Red Hat has taken a unique step in defending itself from a patent infringement claim from Twin Peaks Software: a counterclaim that Twin Peaks is in copyright violation on mount, the file management app that is licensed under the GPLv2. Not only is Red Hat seeking GPL compliance, it's also going after Twin Peaks for damages and is seeking an injunction on Twin Peaks' own product sales. mount, the document goes on to emphasize is licensed under the GPLv2, and can be freely used and distributed as long as the terms of the GPL are met - specifically, if you make a change to mount's code and distribute those changes, you have to make those changes freely available under the GPL so others can take advantage of the innovation. Red Hat has been the copyright holder of Mount - 2.10m beginning in May 2000 and of Mount 2.12a since March of 2004.

Having copyright on mount is like having copyright on the alphabet, the tools of our language should not be under any restrictions. Redhat can also use their defensive weapon offensively by extorting concessions out of others not targeting them in patent trolling for sole purpose of shutting down a competitor, thus emulating the effect of a patent. This is not what GPL proponents had in mind, their restriction was being used in unintended ways as per Church's thesis.

<http://www.wired.com/opinion/2013/09/why-free-software-is-more-important-now-than-ever-before/> Stallman on freedom, does not say a word about the copyright holder and makes a legally meaningless distinction between proprietary and commercial. Something is either proprietary or public domain.

At midnight Playstation 4 launch (2013-11-14 23:52)

I am officially owning Playstation 4. I was next generation with Wii U a year ago on November 18, 2012. I waited at Wal-Mart in Woodbury, Minnesota for 5 hours at a separate line near the restrooms. I preorder it. Playstation 4 sold out at every Wal-Mart in an at midnight. They had extras. Battlefield 4 is the top game right now for PS4. Seven years ago I bought a PS3 at Shop Ko.

Playstation 4 firmware downloads leading to bricked PS4? (2013-11-18 12:06)

This is stupid. First time I downloaded, I downloaded 901 MB. The second time, I downloaded 307 MB. Playstation.com said 325 MB is the correct size. I have to wait for a PS4 game to update to 1.5. Also PS3 firmware 4.46 is also the wrong size. Rely on the videogame to update

Parent's pre-internet social life (2013-11-19 15:42)

With **Youtube**, **Facebook**, **Google+**, Flickr, ICQ, Skype, Plentyoffish, **OkCupid** (online dating) and AIM, how does my parents even come up with the idea with offline social life. Unfortunately, with all of these accounts, my parents still believe I need this extinct version of social life. I say everybody is on facebook, but unfortunately Facebook is demoralizing in their opinion. I live in mixed capitalist society, where everybody wants to sell you something or mind their own business as Plato said. People really do mind their own business and they call the cops if you interrupt them. People will tell the cops of harassment so why bother. Sixty percent Americans still play online multiplayer on

consoles and handhelds such as Xbox One or Playstation 4? If people are not on a dating website, they likely already have a girlfriend or are married to their girlfriend. What the hell.

I was in the bar fifty times. At the bar, I socialize with other patrons and listen to country and rock music normally in bars these days. It was fun, but there was little to do. You had to interrupt a group every time and introduce yourself. Even then, they ask me what I am talking about. I got a phone number from Adam about a year ago. Adam, who is 21, is a part of a bar-hopping posse. Everybody bar-hops at 21. I think I was playing Playstation 2 or Xbox missed out on bar hopping entirely at 21. Oops!

Dead Sea Scrolls are All Jewish! (2013-11-21 11:47)

All the scrolls recovered belong to Hebrew Bible in original ancient language form. The Dead Sea Scrolls were published by the Jewish community for only themselves and have nothing to do with Roman Catholic Bible translations. It's smarter to worry about Max Weber's "Protestant Ethic and the Spirit of Capitalism" than any Dead Sea Scrolls. A thumbnail version goes like this. There appears to be lots more Protestant capitalists than there are Catholic ones. Also, Protestant countries tend to be more economically developed than Catholic ones - so why? Marxism would say that people's ideas are a manifestation of the economic structure they find themselves in, but Weber believes this is only partly true, although he starts off strongly opposed to Marxism, in the end he is much less certain of the limits of the role of economics in providing the base for these ideas to flourish.. All the same, he believes that there is something in Protestantism that makes Capitalism more or less inevitable and that is not present in Catholicism. Now, given the countries picked - Italy and Spain on the Catholic side, Northern Europe and England on the Protestant side, you could possibly argue that living in a country with an incredibly bad cuisine is the problem. But Weber focuses on religion. In the last chapter he says that extreme Protestant views run something like this - God has a perfect plan which he worked out at the dawn of time. There is nothing you can do to change this plan. You don't deserve to be saved - no one does (we are all contemptible sinners and it is only God's grace which saves us in any sense). You cannot know you are saved. The only way you might 'guess' is if God rewards you. So, if you work hard and gain riches you are obviously in God's favour and therefore you might also be saved. Spending money is a sin. So, Calvinism and other extreme sects encouraged people to work hard and not to spend - prerequisites for the growth of Capitalism. Now, that bit is the bit this book is mostly known for. But what I found interesting was the idea at the very end that becoming increasingly wealthy - like Silus Marner - also leads one to become increasingly obsessed with secular interests, not least in increasing ones own wealth to the point of a fetish and to become obsessed with worldly goods, rather than heavenly ones. So, while Protestantism is seen as a kind of prerequisite for the early development of Capitalism, ironically enough, Capitalism does not return the favour and works to undermine the extreme forms of this faith that assisted its own development.

americas first dictator (2013-11-21 16:48)

Glenn Beck was on fire Tuesday regarding President Obama's State of the Union address last night, saying "all they do is spin and lie."

"I say this, honestly, with a heavy heart today," Beck said on his radio program. "What a sick, despicable circus spectacle. So far beneath all of us. From the attention-whores that line the aisle to kiss Caesar and his ring as he enters the chamber ... to the human props that the president and, quite honestly the GOP, used to sell the wares, I couldn't take it."

President Barack Obama greets members of Congress as he leaves after giving the State of Union address before a joint session of Congress in the House chamber Tuesday, Jan. 28, 2014, in Washington. (AP Photo/Larry Downing, Pool)

Beck asserted that, frankly, “there’s a good chance you’re a sociopath” if you’re a politician in Washington, D.C. today.

This was particularly evident, he added, when the president had “the nerve to mock millions of Americans who have already suffered greatly because of [Obamacare], and mocked the tens of millions more who will soon be joining them.”

‘America’s First Dictator’

Beck said he believes every American should document that “this was the State of the Union where our president declared he would become America’s first dictator.”

“This transition began with Woodrow Wilson,” Beck said. “From America that is based on the Constitution to Philip Dru: Administrator, which is just a name for dictator.”

But Beck said that perhaps more “chilling” than the president’s repeated assertions that he will go around Congress, was that half of the U.S. Congress was actually standing up and cheering.

“The founders set this up so each branch would fight for their power,” Beck explained. “It wasn’t just, ‘Well, we’re just going to separate these things and it will just go along fine.’ They knew that in the hearts of men was selfishness and a hunger for power, and so each branch would say, ‘No, no, no. You’re not crossing that line. That’s *my* power.’”

But Beck said that at the State of the Union, the “lemmings” who are about to lose their power cheered the president on “like the Roman Senate and Caesar.”

US President Barack Obama waits to deliver his the State of the Union address before a joint session of Congress on January 28, 2014 at the US Capitol in Washington. AFP PHOTO/Brendan SMIALOWSKI

'Unchallenged' Contradictions

Beck said that President Obama often "takes a little bit of truth and then weaves in a lie" in his speeches. During his State of the Union address, President Obama repeatedly said that America is a land of opportunity, but in the same speech, felt the need to take executive action to create a "ladder" to the middle class.

"Wait a minute. Didn't you just say a barkeeper's son could become the Speaker of the House?" Beck asked. "Didn't you just say that a single mom from the 1960s – when single moms were a pariah in our society, and from a mixed marriage – that kid can become president of the United States? What the hell happened to your ladder? ... How does this contradiction always go unchallenged? Why is it, Mr. President, that you made it? Not just to the middle class, but you kept climbing that invisible ladder that doesn't exist to the *highest* class. You are more wealthy and powerful than I will ever be ... You make the richest 1 % look like rookies."

Unemployment Benefits

"Last night the president again looked us in the eye, he looked Congress in the eye, and he begged them to give the unemployed 'a fair shot,'" Beck reflected. "As if we currently do nothing for the unemployed ... Right now unemployment benefits last [weeks] short of two full years! Two full years! 99 weeks. Mr. President, what *would* be a fair shot? 199 weeks? 1,999 weeks? 19,000 weeks? What's a fair shot, Mr. President?"

Beck continued with mounting indignation: "And the reason why we need more time is because your policies are *crippling* businesses! So we *can't* hire more people. Some of us are on the brink every single day as business owners, looking, 'how can I make payroll when the government continues to screw me *every step of the way?*'"

Equal Pay for Equal Work

"And then the president," Beck continued, "after looking down his nose and squaring his shoulders and mocking us – he then had the nerve to boldly proclaim that women deserve equal pay for equal work."

"I am so sick of this argument," Beck said in disgust. "Is there anyone in the sound of my voice that disagrees with that? Is there anyone that says, 'Oh, you know what? She's one of them dames. Let's pay her half.' There's nobody that thinks that way!"

President Barack Obama, accompanied by House Minority Leader Nancy Pelosi of Calif., leaves after giving his State of the Union address on Capitol Hill in Washington, Tuesday Jan. 28, 2014. (AP Photo/Charles Dharapak)

Climate Change

Beck said President Obama brazenly attempted to "shut anyone up with any different point of view on climate change" by saying "the debate is over; climate change is a fact."

"The fact is, the debate's *not* over," Beck said shortly. "I'm sorry, Mr. President. The fact is, you have nothing. You can't prove this point. There are far too many variables, too many things that change, too many things we just don't know, too many things all these so-called scientists have gotten wrong ... That seems to open the debate back up that man-made global warming is a massive hoax."

The 'Sorry' State of the Union

"So what is the state of our union?" Beck asked his audience. "Not according to the president, his party, or the Republicans ... not those who lied, passed blame to everyone else, but just according to a man, a man like any other man."

"The state of the union is sorry," Beck asserted. "...The state of the union is dark and dismal, and it needs to reconnect with reality. The state of our union is upside down."

But Beck said that if you happen to be a “lying politician” or a “well-connected crony,” the state of the union has “never been better.” In addition to having influence and control, Beck said they have a media that will “attack like a pack of rabid wolves” anyone who says anything remotely “out of line.”

The radio host asked whether Americans are a people that will let the president “and his elitist friends, his allies, his union thugs,” or “the Republicans and their business thugs” reshape America in their image.

Hollywood is stupid; play videogames (2013-11-23 08:46)

I get a bit tired of people whining about films like **Twilight**, or long running franchises that don't seem to end but continue to get worse. If I had a pound for the amount of times I've answered the question 'Why do they keep making the same old things? Why not come up with something new?' with a simple 'because it makes money' I would have at least three pounds!

Like everything these days, the film industry is predominantly about money. That is of course when you're talking Hollywood. If you want unique films that don't fit the Hollywood mould and aren't just the same films being churned out day by day then you need to look elsewhere.

I saw a Yahoo! Answers question the other day that got my back up somewhat, as a huge fan of world and independent cinema. It went something along the lines of 'why are most movies stupid now?' and went on to list loads of recent Hollywood films like The Amazing Spiderman and 21 Jumpstreet, claiming that young people these days

watch complete rubbish. My answer was simple:

You're watching the wrong films.

In my opinion you don't go and watch Hollywood films if you get pissed off by cliches and cheesiness, but so many people are totally against watching anything that's (god forbid) low budget or independent, or anything that doesn't hit the mainstream (i.e. the cinema). A lot of people probably wouldn't dream of checking out local film festivals for independent films, or renting and watching anything that isn't mainstream, and don't even get me started on people's avoidance of any film with subtitles!

Now don't get me wrong, Hollywood produces some fantastic films regularly, in fact I wouldn't say the good ones are an exception at all.

I'm probably preaching to the choir at the moment because I know that the vast majority of the people that read this blog are like minded (because I read theirs also) and probably feel exactly the same!

I frequent my local DVD rental shop when I'm at home in Hudson regularly, and usually rent at least two films a week. It's a small little building full of films from the brand new to the really old. It's like a treasure trove for me, I love it there! There's something so satisfying about picking out an actual, solid DVD rather than flicking through pages on iTunes when you fancy a film for the evening. and when we asked if they had it in yet, the person working there explained that they'd lose money if they bought it in because no one rents foreign films because they don't like reading subtitles. So in other words they'll wait for Hollywood to remake the series (which technically they already have) and then moan about how cheesy and unoriginal Hollywood films are.

Now is the time to point out that most foreign films have the option to watch it dubbed, so no subtitle reading necessary! *face-palm*

It worries me slightly that so many great foreign films get pushed under the radar and ignored. I was surprised by the sheer amount of people ignorant to the original **Girl with the Dragon Tattoo** when the (admittedly very good) remake came out last year. What worries me even more is that the original Swedish film had only been out a mere two years before Hollywood pounced on it. So when people complain about the cheesy rubbish coming out of Hollywood, what they really mean is 'I can't be bothered to look elsewhere and think outside the box'.

Anyway, I digress! The point of this rambling rant was to express my irritation with cinema-goers who constantly complain about Hollywood films being boring and unoriginal, because I'd be willing to bet money that they are the same types of people who refuse to watch world cinema, or indeed independent films, out of what is essentially laziness. I love to indulge in a cheesy Hollywood film every now and then, and I will be rushing to the cinema in April when **Iron Man 3** comes out, I just hate it when it comes to leaving the cinema and one of the friends in the group is moaning about how cliché and awful these big budget, popular films are. They make money. Who doesn't want lots

of money? Why would filmmakers who have the ability to be working in Hollywood **not** want to make something big budget and conventional that they know will make millions at the box office? There is always an audience out there willing to pay good money to see those kinds of films, so of course they're going to keep making them. If you get pissed off with cliché Hollywood blockbusters, don't watch them...look elsewhere, don't moan about how 'all films these days are stupid'. Rant over!

Linux Deepin 12.12.1 review (2013-11-24 14:46)

Let me be a little politically incorrect. Wait, whenever was I politically correct? Scratch that. So yes. What kind of service do you normally associate with Chinese products, let me ask you that? Most of you would probably say cheap and of average quality. To top that, throw in funny names and awkward translations.

Now, let's shatter all preconceptions. I would like to introduce Linux Deepin, a distribution based on Ubuntu, and wait, before you say, here is another boring clone, try to keep your boredom aside. Previously known as Linux Hiweed, and that's a trippy name too, this is now one of the leading Chinese Linux distros. But is it any good? Read to find out.

Live session - A card deck of fresh and new

On first boot, you really don't expect much. The last time I tried a Chinese Linux, it was with the very Windows XP like ylmf, which was okay, but not much more than that, and then Red Flag Linux, a RedHat clone, which was also kind of average. On the other hand, Deepin instantly surprises you with a colorful, optimistic desktop. The thing is, it's really nice branching away from the usual stock. You already know what to expect from software designers in the West. But once you go into the far side of the galaxy, all of a sudden, you discover a different approach to composition, color and aesthetics.

It's a Gnome desktop all right, but it's not ugly or stupid. It even has some small KDE elements, and it's quite appealing. Of course, the icon name spillover across two lines is a no-no, but that's the only thing I could fault at this very first glance.

Moreover, you get all kinds of cool things. Icon previews, hot corners, a stylish menu, which could benefit from less transparency. Still, it's clean and easy to navigate. While many other distros implement a fairly similar solution, you might assume it would be the same thing all over, but no, it's not.

Wireless, Samba sharing

They worked just fine. No worries. Moving on.

Multimedia - Awesome

Linux Deepin 12.12.1 does give you Flash and MP3, although some of the more exotic codecs have been left out. But that's not all. You get a sexy, slick media player called DMusic. First, it opens with a short intro screen, which explains the basic functionality. Really cool and very beautiful.

The same goes for the video player, which is called DPlayer. It looks somewhat like Windows Media Player, and it too comes with a stylish three-slide introduction that gives you a quick taste of your imminent experience.

After this shock of senses, watching Youtube almost feels too bland.

Performance

At some point, with too many programs open, the distro became slightly sluggish. While the CPU usage was relatively low in the live session, the memory consumption was huge, and Deepin was chomping through swap. I guess it has to do with the Intel graphics card not keeping up with the graphics stack, which used to be a problem in olden Ubuntu releases, before Pangolin and such. But we will see what gives later on.

Installation

There are not that many languages available in the setup. Three to be exact, two of which are Chinese, and the third the one you're reading right now.

No brainer here, it's simple. One Ubuntu, all Ubuntu. So it's just the matter of selecting the right partitions. For me, it meant displacing the fourth distro, Mint Xfce from its test slot and placing Deepin 12.12.1 there, alongside three other friends and family.

A pretty slideshow completes the picture. Or several pictures. Get it?

Using Deepin - Very fun

The installation was rather fast, I must say. There were no problems with the bootloader setup. The distro came up true and mighty, and the casing cooled after the installation strain. The responsiveness improved, but it was still not stellar compared to many other Ubuntu-based products. More soon.

Software management

Deepin Software Center is another awesome, unique piece of software. Underneath, it's the usual Ubuntu stuff, but the presentation layer has been altered to be truly amazing. First, you get the same cool splash screen. Then, interacting with the Software Center is really fun. Your searches come up with suggestions, inline. If you select any which software, a cute animation will toss it into the Install queue, where you can then watch the progress of your installations. Categories are crisp and clear to browse, the previews are shiny and inviting. This is quite joyful, I must say.

Skins!

But that is not all. You can skin your Software Center. You can skin all your applications, and the idea is similar to the one implemented in Kingsoft Office. Recall my review, and the little shirt icon in the window bar. The same thing here.

Applications

Deepin packs a very decent set of programs. You have no less than two office suites, both LibreOffice and Kingsoft Office. Then, you have Firefox, Chrome, Thunderbird, Pidgin, Skype, and some more. Not all is entirely rosy, though, because some tools really behaved weirdly. For example iptux came up, scrunched itself into a tiny, tiny rectangle and stayed that way. What it does and why it's needed, beats me. I could not resize it.

Desktop customization & beautification

By now, you have figured out that Deepin comes with a somewhat Windowsy look overall. Then, when you start customizing the desktop, it becomes even more apparent. You can change all kinds of things, and the menus are almost identical to Windows 7. Still, this is not necessarily a bad thing, because the different elements are composed with style and they work well.

System usage, suspend & resume

Deepin is not a hungry distro. It will satisfy itself with just 280-290MB of RAM and low CPU figures, but then, the underlying latency slash responsiveness thingie remains. It becomes really evident when the system monitor failed to refresh its grid, and you end up with the screenshots like below. Hot case despite the low activity, programs not being as snappy as they could, so maybe Deepin is trying too hard on hardware that just can't pull all its might along properly. There were no crashes, and suspend & resume worked fine.

I was surprised to learn that Deepin lists my Intel Wireless as Broadcom Wireless, and using the driver. This is a surprise, because I have never seen something similar with any other Ubuntu-based distro on this test box, a T61 laptop.

3D effects & Compiz

In a very classic sense, Deepin gives you the Compiz Settings Manager, so you can fiddle around. This is similar to what used to be a norm in older releases of Ubuntu, but not anymore. Then again, Ubuntu moved to Unity, and Deepin has not. In turn, this seems to be having a negative effect on the overall desktop responsiveness. It's not crippling, but it's not smooth either.

Printing

It worked fine, Samba and all.

User manual

Now here's another cool surprise. Linux Deepin 12.12.1 comes with an interactive user manual, which is just a collection of image albums, explaining the fine details of this and that category. Nothing too strenuous, yet done with elegance and appeal. You also get the percentage counters, so you know how much you still have left to read. Great.

Other stuff

In the system info area, Deepin is the only distro I know that actually sums the local disk space and provides a single number instead of splitting it by the devices. Or maybe I am just being too fanboyish at this point. This is an excellent opportunity for you to dismiss the entire review based on here be one small omission.

But there's a catch!

You already know that Linux Deepin 12.12.1 is not the fastest distro out there, although it is not very hungry on resources, per se. The simple thing of the matter is, the application response time is slow, and I'd like to partially blame Compiz here. You feel the strain of the graphical stack. But that can be solved by using a more powerful machine, like my Nvidia-powered HP laptop for instance, so not everyone will notice this.

The bigger issue is that this is a Chinese product. And as such, it is entirely designed for the local market. Everything is geared toward the Chinese users, and you can't have any global market penetration that way. Most distros offer dozens of languages and as many regional servers that can distribute the load as well as speed up the updates and installations. But Deepin has only one repo, and it's far away, and for me, it was painful watching the installation of a few MB worth of take take tens of minutes, because the throughput was around 80-100KB/s most of the time, sometimes much less. So the question is, no matter how good Deepin is, can it make an impact?

Conclusion

I am utterly pleased with this distro, its problems notwithstanding. There were a couple of serious ones, the slow updates and the applications responsiveness, plus a few excusable niggles. On the bright side, Deepin is a whole constellation of interesting new features, all of which are beautiful and fun. This is truly one bright, shiny operating system.

It's functional too, and it really kills the little bias man inside your soul, who expected pretty low quality and cospasta features all over. Well, there are some, but they are done with moderation, they do not intrude or take over, they do not obstruct, and they blend well with the overall product. Plus, the Gnome framework has been tamed magically.

One day, once Deepin makes itself snappy and crisp and it gets repositories around the globe, it will truly have become a superb, peerless operating system for the common user. For the time being, it's a great promise of what it can be. 9/10, but it can be perfect, or even better. With the full force of a billion and a half people who might one day decide they want to use this, and no mistake, it has the potential of flooding the market with Linux. I am mightily pleased and totally surprised. Awesome.

Cheers.

Impeach the fucker (2013-11-28 16:56)

Though both involve achieving a goal, politics is more like fighting a battle than taking a trip. We can't just think about how we move from where we are to where we want to be. We have to think about how the adversary will move to hinder us – not only by using his own forces against us, but by luring us into maneuvers that weaken us, and expose us to failure or defeat before reaching our objective.

The tide is rising on which to launch the impeachment/removal craft that can successfully carry the nation to safe harbor from Barack Obama's tyrannical intent. In addition to commentators, pundits and politicians who are taking

up the cry, I have begun to receive fundraising communications from apparently well-meaning groups asking people to sign petitions to Congress, fund phone calls to representatives, etc., pushing for impeachment. You know that there's at least a perceived boomlet of public feeling at work when people think it will help in their appeals for contributions.

This budding enthusiasm is a positive moment in the battle to thwart Obama's plans for dictatorship, but only if it energizes the engine of a vehicle capable of sustained movement toward that strategic objective. Apart from such a vehicle, it could instead provide Obama's elitist faction collaborators with an opportunity to engineer a fall that deflates enthusiasm instead.

For example, if the Republican-controlled Congress impeaches Obama on a timetable that hurries to trial before the upcoming election, what will happen? In the Democrat-controlled U.S. Senate, the vote to remove the would-be tyrants will fail. Obama and his elitist faction collaborators will say that settles the matter, and they will use every propaganda outlet at their disposal to enforce that conclusion upon the public mind.

But strategically, the success of the impeachment/removal effort depends on turning November's congressional elections into a vote of no-confidence in the present administration of government – a referendum on the impeachment/removal issue. Doing so is the only way to maximize the number of people in Congress who support impeaching/removing Obama and his cronies, while putting maximum grassroots pressure on other congressional representatives to join their ranks.

This electoral strategy is critically important, since only by reforming Congress *at the ballot box* do the American people stand a chance of reforming the government before Obama completes his tyrannical maneuvers. *Obama's elitist faction collaborators therefore have a strong interest in making sure the impeachment/removal issue does not become the focus of the 2014 vote.*

The Bible offers a good illustration of their best strategy for turning the growing energy of the impeachment/removal cause against itself:

And Judah took a wife for Er his firstborn, whose name was Tamar. And Er, Judah's firstborn, was wicked in the sight of the LORD; and the LORD slew him. And Judah said unto Onan, Go in unto thy brother's wife, and marry her, and raise up seed to thy brother. And Onan knew that the seed should not be his; and it came to pass, when he went in unto his brother's wife, that he spilled it on the ground, lest that he should give seed to his brother" (Genesis 38:6-10, AV).

As the enthusiasm for impeachment/removal rises, I therefore expect the elitist faction's fifth columnists to raise a clamor in favor of dealing with the impeachment/removal issue now, right away, without waiting to give people a chance to reform Congress with their voting power in November. That way, when Congress reconvenes in 2015, Obama and his GOP quislings will still be in charge, ready to move forward with all the socialist, America-destroying offal they mean to ram down the throats of the American people.

Another aspect of what we might call the "Onan maneuver" will be to fund a plethora of different groups offering to put pressure on Congress for immediate action. The sly aim here is to multiply spillways so that there is no one venue where the roster of support for the impeachment/removal effort can be seen to build.

Yet such a roster is the key to maximizing the effectiveness of the impeachment/removal congressional reform effort. As visible support for that effort builds, it will cast a long shadow over the expectations and calculations of those on the political scene *and* those who observe it.

This is why I am encouraging people to visit PledgetoImpeach. Add your name to the roster of voters demanding that candidates take the impeachment/removal pledge. Do everything you can to encourage your like-minded friends, co-workers and others to participate in the effort.

Rightly understood the impeachment/removal strategy isn't about *subjects begging rulers for favors that mitigate their tyranny*. It's about *free people mobilizing our voting power to demand and elect representatives who will implement our will to defend/restore America's liberty*.

15.12 December

The Malazan Book of the Fallen by Steven Erikson (2013-12-09 13:17)

I'm going to state it right out – **The Malazan Book of the Fallen** by Steven Erikson is the most ambitious epic fantasy series ever written – this is both its greatest strength and greatest weakness. Rather than ambition, fans of epic fantasy are much more likely to honor tradition and nostalgia, but the genre has come far from where it was effectively defined by **The Lord of the Rings** and fans have grown as well. These days gritty and subversion seem to be the buzz words of fantasy fans, and while **The Malazan Book of the Fallen** certainly meets both in numerous ways, it really is much more.

It's been ambitious since the start when Erikson proposed **Malazan** to be a 10-book series back in the 1990s – there was never any trilogy-creep, this was always going this long. But of course it isn't so simple – the series is not Erikson's alone. The **Malazan** world was co-created with Ian C. Esslemont who has written three books of his own that support the series, with three more to come. While Erikson's 10-book series is complete, once Esslemont finishes his parts it will be more complete, perhaps making this review a bit premature.

The **Malazan** world has its origins in Dungeon's and Dragons and GURPS role-playing campaigns played out by Erikson and Esslemont and has since grown in ambition. In many ways the series is meant to be more of a response to epic fantasy than a part of it. Not in the same 'FU' manor as **The First Law** by Joe Abercrombie, but again as something more. Ultimately, it's about the human condition and the cost of civilization, but again it's more. The series is also about deception in something of a post-modern, meta-fictional way. While the foreshadowing is present, and even a rubric to the whole series buried in one of its volumes, it's still difficult to see beneath surface. It's all light, darkness and shadow with more than a bit of sleight of hand.

However, don't let me mislead you into thinking that it's not epic fantasy, because it is. Like most epic fantasy, this is a book of war and magic. And the magic plays an incredibly important role – it's powerful...all-powerful. The scope and horror of magic is laid out from the beginning, while the mechanics of it remain an enigma. In every book we meet a hidden power that rises to tremendous, spectacular heights. Of course that's the point of it – readers may want to call foul, may want to shout *dues ex machina*, but they miss the point.

The series begins as a tale of a conquering Malazan Empire that has overextended itself. In *Gardens of the Moon* (Book Depository, Powell's Books, Indiebound) the reader is dumped strait into the middle of it all without the typical build-up. This can be exhilarating, overwhelming, and off-putting, though I found it immensely rewarding. We get a feel for a mix of races and species that is huge and a rich world history with gods and other powerful immortals that literally walk the land, interfering with mortal lives. Though some mortals interfere right back, for gods can die too. It's through this complex tapestry that Erikson focuses on humanity. Every soldier is a philosopher, every person an everyman (or everywoman, though even with numerous female characters, the series has an overwhelming male-ness to it), with the view of it all is just as often through pawns as kings and queens.

–
–
'These Malazans, they shame the gods themselves...'

An important point the series is put right in the series title, perhaps the most important point: **The Malazan Book of the Fallen**. It's the word fallen that focuses it all. For this series is not (necessarily) about those that live to fight another day, to see another book, who survive the ultimate convergence of power – this series is about the people

who fall along the way. The price, the toll, the compassion, the sacrifice, and eventually, the reward. This is a series where the dead tend to not go away and the fallen may not die. Each book itself shows something new, a new style, a new theme within the overall series, but in the end there is a method to the madness of it all.

I will remember this. I will set out scrolls and burn upon them the names of these Fallen. I will make of this work a holy tome, and no other shall be needed.

Hear them! They are humanity unfurled, laid out for all to see – if one would dare look!

There shall be a Book and it shall be written by my hand. Wheel and seek the faces of a thousand gods! None can do what I can do! Not one can give voice to this holy creation!

But this is not bravado. For this, my Book of the Fallen, the only god worthy of its telling is the crippled one. The broken one. And has it not always been so?

I never hid my hurts.

I never disguised my dreams.

And I never lost my way. And only the fallen can rise again.

It's in his ambition, this response to epic fantasy that Erikson gets in trouble. Yes, it's epic fantasy in the extreme – the magic and powers overblown, the gods both more and less than they should be, the grunt suffering through it all somehow becomes the most powerful of all. It chafes fans of epic fantasy. It's supposed to. Fans often decry the seeming over-emphasis on suffering, marching, the camp-fire conversations, the little people. While the action is incredible, it is interspersed with long and tedious ramblings that become philosophical and at times down-right didactic. While Erikson certainly over-indulges himself, many fans seemingly miss the point. Or perhaps they don't care about the point. Many will fail to complete the journey of the series, many will be upset, disappointed, even angry with Erikson for what he writes. The criticisms often wielded only show Erikson how much they missed the point. Erikson plays with this in the text – often proactively for areas he knows that will bring especially pointed criticism. He knows these books aren't for everyone, and that if everyone likes what you are doing, you are doing it wrong. But it clearly it stings, and sometimes Erikson seems to lash out in response.

–

'Sad truth,' Kruppe said – his audience of none sighing in agreement – 'that a tendency towards verbal excess can so defeat the precision of meaning. That intent can be so well disguised in majestic plethora of nuance, of rhythm both serious and mocking, of this penchant for self-referential slyness, that the unwitting simply skip on past – imagining their time to be so precious, imagining themselves above all manner of conviction, save that of their own witty perfection. Sigh and sigh again.'

Ultimately, there is a hope to it all – this is not the nihilistic proclamation so many claim. It's a grand plan for the better of humanity. Only at times the darkness, the faults and flaws, and humanity itself seemingly deserve no hope.

–

'Hedge was waiting, seated on one of the tilted standing stones. 'Hood take us all,' he said, eyeing Fiddler as he approached. 'They did it – her allies – they did what she needed them to do.'

Aye. And how many people died for [it]?''

...'Little late to be regretting all that now, Fid.'

'...They used all of us Hedge.'

'That's what gods do, aye. So you don't like it? Fine, but listen to me. Sometimes, what they want – what they need us to do – sometimes it's all right. I mean, it's the right thing to do. Sometimes, it makes us better people.'

'You really believe that?'

'And when we're better people, we make better gods.'

Fiddler looked away. 'It's hopeless, then. We can stuff a god with every virtue we got, it still won't make us any better, will it? Because we're not good with virtues, Hedge.'

'Most of the time, aye, we're not. But maybe then, at our worst, we might look up, we might see that god we made out of the best in us. Not vicious, not vengeful, not arrogant or spiteful. Not selfish, not greedy. Just clear-eyed, with no time for all our rubbish. The kind of god to give us a slap in the face for being such shits.'

...'Ever the optimist, you'

This review both coincidentally and intentionally reads like the series itself – perhaps full of insight, perhaps full of bullshit, always seeming a bit of mess. It's overly long (at least compared to what I tend to write), it's defensive, dismissive, disagreeable and likely to piss a few people off. The review is journey, a misinterpretation, and it gets it right. And it's ever self-aware, perhaps to a fault. It's the most ambitious review I've ever written.

The Malazan Book of the Fallen

isn't for everyone, and in many ways it may not be for fans of epic fantasy. While it is absolutely for the fans. And it's the most ambitious epic fantasy out there – period. Though the **Malazan** series by Erikson is over, something of an epilogue remains to be written by Esslemont and Erikson has promised two more trilogies and a continuation of the novellas set in the world. The dead don't stay dead. The fallen may not be who you think they are and can rise again. Perfect.

-

And now the page before us blurs.

An age is done. The book must close.

We are abandoned to history.

Raise high one more time the tattered standard

Of the Fallen. See through the drifting smoke

To the dark stains upon the fabric.

This is the blood of our lives, this is the

Payment of our deeds, all soon to be

Forgotten.

We were never what people could be.

We were only what we were.

-

Remember us

Bought a ASUS Radeon R9 270 (2013-12-12 18:43)

I bought myself an early Christmas present, the ASUS Radeon R9 270 2 GB graphics processing unit for \$200. I can play PC games on my other PC. My other PC has a Radeon HD 5970 Black Edition.

The Xbox One has a faulty Bluray drive at launch. The Xbox 360 wasn't reliable until the Falcon CPU chip from 2009. New Xbox 360 prices are unbelievable, past \$300. New Playstation 3s cost half that.

US Military driving US economy? (2013-12-12 19:46)

According to British experts, Russia is in the world top three in terms of military expenditure. The country is increasing its military spending, because Russian defense industry is in need of revamping and the army needs to be rearmed. However, the Russian military-industrial complex is nowhere near the absolute leadership in terms of expenditure. The first place is firmly occupied by the United States whose army is the backbone of the economy. By the end of 2013 Russia became one of the top three leaders in terms of spending on weapons, which is not surprising. In the past year 68 billion dollars was invested in the military-industrial complex of the Russian Federation. These data were published by the Organization IHS Jane's that conducted relevant research. Russia has no intention to cut its military spending. On the contrary, even a more significant amount - \$78 billion dollars will be invested in the Russian military-industrial complex in 2014, and each subsequent year the defense spending will increase by \$10 billion. However, Russian experts believe that Russia's accession to the top of this ranking (especially given that it comes from a British study) does not mean that Russia will be able to quickly move the undisputed leaders of the defense - the U.S. and China, which is not surprising given the political system of China and the U.S. aggressive philosophy. "Russian cannot become a leader in military spending in the coming years, even decades. Why? It is sufficient to compare our spending and that of the Americans," Boris Yulin, a historian and military expert shared with Pravda.Ru. "The fact that Russia is on the third place does not mean that we are only a little behind. We are lagging behind significantly. The entire U.S. economy rests exclusively on military power. That is, the dollar is backed by the American aircraft carriers, nuclear submarines and aircraft, American military bases around the world, and not the American economy." The expert stressed a very important point - the Russian army is equipped with very outdated weapons. In fact, Russia's defense industry requires enormous funds, not because the defense industry requires development, but because, in principle, the Russian army needs to be rearmed. According to Boris Yulin, there is a need to eliminate one big gap that occurred in the defense industry in the 1990s and early 2000s, the period when there was no military construction, production was halted, and the survivors managed to stay afloat only because of foreign orders. "Today we have to make a breakthrough, because we have been disarming for a quarter of a century," told Pravda.Ru Colonel-General, historian and president of the Academy of Geopolitical Issues Leonid Ivashov. "We declared that we had no external enemies, that we served as an example of a peaceful nation, and robbed and disarmed the entire defense sector and budget, privatized defense industry, and destroyed the armed forces. According to the officer, the increased investment in the Russian military-industrial complex is due to global military and political events of recent years that clearly showed the West's position in relation to the countries rich in natural resources. "It is extremely difficult to rebuild what was being destroyed for a quarter of a century, despite the fact that the defense is constructed as a system. Today, some elements of the system are preserved through the activity of the designers and directors. Something was preserved by foreign orders, trading on the global arms market'; something was preserved in Ukraine, Belarus, and so on. Now the task is to combine it all and give it a new spin, a new modern quality to the weapons required by the army. Today we may not be the third," suggested Leonid Ivashov, adding that Russia will never be the leader. "Because from time immemorial we have had a defensive rather than aggressive policy, and the defense is less expensive than the offense." It appears that Russia does not have a goal to be a global leader in terms of defense expenditure. That is, of course, the military might needs to be enhanced, and advanced weapons, missile defense system, and so on need to be developed. High military spending is an indicator of a country's foreign policy. The U.S. is building its dominant role in world affairs through active hostilities. China is climbing towards global leadership by conducting a military reform. Russia's development of military industry has other reasons. Russia cannot ignore major combat operations conducted in the last decades on the Eurasian continent when most of its land is occupied by Russia. Today it is extremely important for Russia to develop air defense systems, space defense and other branches of the armed forces, which would provide reliable protection of the Russian borders and continue to give weight to Russia's decisions regarding world events. Let major military spending remain the privilege of the countries whose economies would immediately collapse without these injections.

Match box and Hotwheels (2013-12-14 22:36)

I have quite the story to tell you about Matchbox and Hot Wheels. I've read at least 20 articles from the US and UK how children and adults alike should collect these toy cars. Now, I hate to be the **adult in the room**, but I sold my collection to goodwill! I had about 60 cars in a briefcase. Matchbox and Hot wheels predated my first videogame console. I had LEGOs (that I still own), Matchbox, Hot Wheels when I was 10, but that was then.

I made a lot of bad decisions in my childhood such as I didn't collect Warhammer 40,000, Magic the Gathering and Dungeons and Dragons when I was 10. These reasons only result in unpopularity. I was in the doomed to fail childhood of the 1990s predating all Facebook, ICQ, MIRC, MSN Messenger and EXTREME limited access to dial up Internet.

I was absolutely right about stop collecting LEGOs however. Mall of America LEGO center had children playing there and everybody around here has gone to Mall of America at least twice in their lifetime.

Here is a photo of my collection.

Red Hat Linux 7.2 ISOs (2013-12-20 06:39)

My high school Linux distribution at Chippewa Valley Technical College saved on Archive.org I remember writing a Red Hat 7.2 review in 2002.

I also find images of an old Suse Linux 9.2 from 2004. There is also Suse Linux 9.3.

They keep these ancient distributions online so Hollywood can film "The Social Network".

Full directory

Linux channels on Freenode (2013-12-20 12:57)

My last resort is 1980s chat rooms with text flying across the screen like Facebook or Goodreads. The Linux channels on Freenode are busy 24/7/365. Checked out ICQ 8.2, but there was few IRC random chatrooms unlike 2004. ICQ just uses IRC for chat. ICQ 8.2 also connects to Google Talk, Facebook, and AOL Instant Messenger. The vulgar slang jibe that was on ICQ's IRC chat is ridiculous. ICQ is used by gangsters, I swear.

Bought Magic the Gathering: Duels of the Planeswalkers 2014 (2013-12-20 23:15)

I got this Duels of the Planeswalkers 2014 off the internet. It allows someone without Magic allowance who doesn't drive to Friday Night Magic to play Magic the Gathering for real cheap. The reason why I waited this long to play Magic was because I knew it as an expensive endless money pit. I heard Magic the Gathering is way more fun.

My 2013 Retrospective (2013-12-22 15:32)

So if people aren't tired of me just sharing all of my opinions about this last year, well too late, I've already gotten this written. This comes somewhat due to the fact that a number of these were culled from my initial list, as I worried it might get a bit too long as it was. But given that I got a great set of responses the first time around, and that it incites interesting discussion, then I wanted to present the rest of my list.

I'm also giving this one the Story That Could've Been Solved if Everyone Just Went to the Cops award. Not only did the game never adequately explain why Ethan didn't even consider taking the box of origami to the authorities (not to mention all the previous fathers), but it also called into question the credibility of much of the developments. Just imagine: the cops could've gone to the power plant, shut the place down, and scoped it out for the next computer chip. They could've gone to each new place, realized that the computer chip was already there somewhere, and found it without having to do anything drastic. The box of origami would've given them more insight into the mind of the Origami Killer. And once the player learns who the killer is (and that he's essentially walking around the city pretending to look for himself) then it becomes more obvious that he's not hanging out with Shaun ready to kill him if Ethan screws up in any way. Which makes the time limit entirely based on the fall of the rain, rather than any potential actions from the Killer. I mean, the moment it became obvious that Shaun's location was on a street named Roosevelt, I wondered why they couldn't have just had every cop in the city checking all the storm drains along Roosevelt. Surely that would've taken less time than all the arguing, equivocating, finger chopping, and running from the police that we did get. I also write this fully aware that if calling the ending to BioShock Infinite "convoluted" got me in trouble, there are a couple on here that may very well get me evicted. (Now see if you can resist the urge to just scroll down and see what I'm talking about.) Please bear in mind, neither of these are meant as an assault on people who legitimately enjoyed the games in question - they are simply my own opinion. And as always, you're welcome to disagree with me in the comments - just please keep it civil.

Best Rewatch of a Classic TV Series

Star Trek: Deep Space Nine

I haven't done a full watch-through of the entire show more or less since it ended in 1999, so it was a pleasure to go back, especially given that I'm quite a bit older now, and better able to appreciate its virtues. While I have enormous affection for both The Original Series and The Next Generation, DS9 easily wins the contest when it comes to best Star Trek series. Building on the strengths of its predecessors (and taking advantage of a studio distracted with the launch of a new network) this series found its voice by being very, very different from what came before, without ever radically deviating from the basic tenets of the most imperative Star Trek motifs. In the process, we got the best - and best developed - ensemble, a stunningly well-realized and enormous supporting cast (including the best villains the franchise had since Khan), a rich and complicated mythos in the villainous Dominion, the first true serialization Trek fans ever witnessed, and the pushing of moral boundaries and the questions they raise even farther than its predecessors. Not only does this show demonstrate why I love Star Trek and why I love science fiction, it's also a great example of why I love television.

Best Climax

Journey

This game gets a lot of credit for its music and multiplayer, and both are well-deserved. The soundtrack is noted for getting a Grammy nomination (first ever for a video game), and no doubt about it, the anonymity of the co-op is something special. But the one factor of this game that sticks out to me in the most memorable way is its final moments. After trudging through the wind and snow and finally collapsing, your nameless protagonist is revived, given an enormously long scarf, and thrust up past all the leviathans to the crest of the mountain - a reward for making it as far as you did. The final level is pure joy: with the long scarf and the water made of magic, you essentially just fly up and up and up ever higher, while the music swells into its best, most emotional theme of the entire game. And walking through that bright light into the heart of the mountain, with an end that is also a beginning, the game shows you why it is so aptly named Journey.

Most Overhyped Game

The Last of Us

Have you ever found yourself reacting - no matter how subconsciously - to the reactions of others regarding a game or a movie or a book? You don't do it intentionally or willfully, or in any way mean-spirited. But when you don't love it as much as others, then there reaches a certain point when you find yourself saying, "It's good - but it's not that good"; until eventually, that pretty good experience you had is only okay. In retrospect, I think *The Last of Us* was an okay game. I love Naughty Dog, and when it comes to developers in the industry, they are definitely at the top. Heck, I even think that narrative is very well structured. But unfortunately, it just never emotionally connected with me. The two main characters - especially Joel - were just unlikeable enough that I never really engaged much in either (not like I have with, say, Nathan Drake). And I never really bought into their relationship. Combine that with the somewhat-too-similar-to-*Children of Men* story, and the fact that I kind of guessed at least part of the ending, and it just didn't register with me like it did others.

Worst Action Film Posing as Science Fiction

Between this and Star Trek Into Darkness, I'm starting to sincerely believe that Hollywood has forgotten what science fiction actually is - and in its place, has been creating action films that take place in traditional science fiction settings. (Let's hope Jupiter Ascending and Interstellar do better.) This wasn't necessarily a bad film, but it was a bit bland - and that likely could've been fixed if it had actually stuck to its guns when it came to the science fiction elements. To be an actual in-depth examination of class disparity (and the probabilities of the upper class creating something like Elysium) and using the sci-fi elements to infuse them. But in the end, what it ultimately boiled down to was a mano y mano between Matt Damon and Sharlto Copley. By the end of the movie, I was bored. And an hour after I walked out, I had largely forgotten most of it.

Best Opening

BioShock Infinite ✖ If there's a video game moment that I would add to my favorites list from the year, this would be it. And I certainly wasn't expecting something so affecting when I first booted up the game - especially given that, at the outset, it starts roughly the same as the original BioShock. Our first-person protagonist is out on the ocean and guided to a lighthouse, which he enters, and is then transported to our out-of-this-world city. But once Booker reaches the clouds, holy cow, is it amazing! The color palette is stunning, the framing of the angel on Monument Isle is gorgeous - giving us our first glimpse of Columbia - the music is truly perfect in every way (both themes) and then the exploration of the baptismal area with all the candles and quotes is surprisingly serene. Now that is how you start a game!

Movie Too Connected to Current Events

Captain Phillips

This is not a bad film, by any means. I have a few minor criticisms about its make, but no denying - Paul Greengrass knows how to make a taut, tense thriller; and Tom Hanks has rarely been better. To say nothing of how terrifying the situation is, especially one that imposes upon an otherwise mundane sort of day; and the kind of heartbreaking socioeconomic circumstances our antagonists come from, reminding us that these pirates are very different from our romanticized pirates of old. But unfortunately, given that these events only took place a couple years ago, then it largely took away from the suspense. Much of the film is built around wondering whether or not our title character is going to die - but if you know the story (as many people do) then you know not only that he lives, but how the final moments play out. It really robs a story of its power when you know exactly where it's headed and what the consequences are.

TV Series Most in Need of a Cast Change

Agent's of SHIELD

Oh, Agents of SHIELD. I still have faith in you. I'm still holding out hope that you will be good - in spite of a somewhat disappointing 10-episode start. There's still so much potential. But after our mid-season break, I've never been more convinced: someone in the main sextet needs to go. For whatever reason, it just isn't working as is. And plenty of other series have shown us how much benefit can be made when good characters are brought to the forefront (and bad characters dropped by the wayside). While May and Coulson are the only must-haves so far, it's really the trio of Skye, Simmons, and Fitz that are proving the most annoying. And not just on an exclusive basis - we can pretty well expect that from them week to week. Simmons should stay, since she's demonstrated a great deal more maturity when interacting with characters other than Fitz. Skye, meanwhile, is vacillating between a manic pixie dream girl and a Mary Sue. And Fitz is a willfully obnoxious 12 year-old (and saying so is a bit of an insult to willfully obnoxious 12 year-olds), completely lacking in self-awareness, and more annoying than fingernails on a blackboard. Replace either with anyone more mature and more experienced, and it will help escalate the entire experience.

Biggest (Somewhat Forgettable) Relief

It's difficult when you're watching someone adapt a text you're attached to. I say this as someone who, by and large, still stands by the notion of their inherent value. Almost anyone can point to an example where it was screwed up - and you never want that to happen to something you love. Ender's Game is not only one of my favorite books, but I've watched people discuss its possible translation into film for years now. And unlike Lord of the Rings, its trailers weren't exactly promising. I've only seen it the one time; but primarily, my response to it was a sense of relief. It wasn't the most brilliant film ever made, but at least they didn't screw the story up - which was, in it of itself, an accomplishment. Unfortunately, it was just underdeveloped enough in the characters that it's also been somewhat of a forgettable experience. I'll just go back to reading the book (and its sequel) again.

Most Rage-Inducing Experience

Shadow of the Colossus

In retrospect, I'm actually not all that surprised I didn't like this game. Given that it's basically a series of different boss fights - and that I generally hate boss fights - then I view it as a good lesson to not let myself always buy into the hype. I liked the sparsity of the gameworld, and once I looked up the story, it seemed pretty cool. But I gave up after the completion of one boss when I realized something: I hated this game. And there is no quicker way to make me hate something than by making me feel stupid - and not just stupid, but stupid in the sense that I felt like the game kept expecting me to know everything I was supposed to do and how to get there...without telling me hardly anything of how to accomplish it. Truly, there's nothing that enrages me more than implying something, and then becoming upset with me when I can't just figure it out on my own. This is the first game I've rage quit in a very, very long time. And in the process, it kind of demonstrates why I hate boss fights.

Best Replay

Metroid Prime Trilogy

I have a hard time not returning to this one too frequently - and I put it that way, because I have the unfortunate habit of playing games I love into the ground, until I become a bit more tired of them than I would like to admit. This has kind of happened with the first Metroid Prime (even with three years since the last time I played, I can still walk into any room in the game and tell you all the suit upgrades hidden there and how to get them) and so it's good to take a breather. But still, it's such a pleasure to return to them - and play through them in succession (on the Wii, no less). Each individual gameworld and its sense of exploration is glorious, the soundtrack is perfectly tuned to the experience, and the stories are so beautifully conveyed through the scanning of objects and inscriptions. Truly, one of the greatest game collections ever compiled.

Best New Soundtrack

Assassin's Creed II

(I'm refraining from discussion of Xenoblade Chronicles until I actually finish the game, but needless to say, it also has a wonderful soundtrack.) I love the platforming in this game - and the sense of free-roam while scrambling over rooftops is a ton of fun. But it's really the music that sealed the deal for me. While the title theme has already become a classic, it was the variations I really appreciated. From the Racing theme, to the cycle of different music that plays while exploring the likes of Venice and Florence; it makes the experience even more a joy - climbing up the side of a building, listening to lookers-on down below express their surprise, and feeling the swell of that subtle theme underneath perfectly express all my emotions as I'm hurdling between buildings. This alone helps make Assassin's Creed II a great game.

Best New Combat System

Dragon's Dogma  There's a lot to enjoy about this new IP; and the combat definitely stands at the top. Once the player reaches the capital city of Gran Soren, you gain the ability to switch between vocations (i.e. classes), and that's when the combat system really starts to open up. Each different vocation (typical base classes like fighter and mage, and sub-classes that combine the above, like mystic knight and magic archer) has a different set of skills, more of which become available the more enemies you defeat. And the player has complete freedom to switch between vocations at any time, choosing out which abilities to use, and where to map them on your controller. When you start playing around with them, the wealth of abilities - and openness to the gameplay - makes the combat sections a true pleasure. Yeah, the Pawn system's pretty cool, but I haven't had so much fun killing things since Kingdoms of Amalur.

Most Convoluted Story

Final Fantasy XIII-2

I don't even know where to start with this one. Protagonists Serah and Noel begin traveling the timeline; they begin jumping between time streams to alternate timelines while ending paradoxes to restore the "true" timeline, then at some point there's a diversion to a mechanical tower where there are alternate versions of the antagonist Caius and his companion Yeul? And then Yeul is...some kind of oracle that's re-born every generation? And Caius wants to destroy time so that she'll stop dying? And there are multiple versions of Yeul? And then Serah dies at the end before a "To be Continued"? Ack. I'm so confused.

Better the Second Time Around

Iron Man 3

My first sitting of Iron Man 3, I didn't really love it; or like it, even. I don't know what I was expecting. But I was kind of, meh. (And annoyed at Hollywood's continued presentations of "ugly" people vs "pretty" people.) But circumstances took me back a second time, and wow, did I like it a whole lot more. I love the idea of taking Tony away from everyone and everything; I love that there are repercussions from the attack on New York; I even love the Mandarin twist, and the social commentary it brings. Plus, the battle with all the Iron Man suits at the end is just so darn fun. I'm glad I took the effort to see it again - it's a good reminder that my perceptions of a story can change, and even a second viewing can be a different experience.

Not as Good the Second Time Around

The Walking Dead

Early in the year, I gave The Walking Dead a try, and did my best to catch up (all the while the second half of third season aired). I sincerely enjoyed the series - for its pacing, for its ruminations, for its themes, and for its clear interest in the deterioration of humanity over the zombies themselves. But when I sat through it all again with my sister as she tried to catch up for fourth season, I found it overall less compelling. It's good one time around, but when you know where everything's going and ends up, then the pacing really starts to drag.

Most Offensive Rehash of a Great Film

Star Trek Into Darkness ☒ I don't know what's worse: that this really isn't a Star Trek film at all, that this isn't even a science fiction film at all, or the irony of the fact that there were clear attempts at fan-service in recreating classic moments from Wrath of Khan that wound up alienating the majority of Trek's fanbase. JJ Abrams has absolutely no idea whatsoever what makes Wrath of Khan a great film. Which is because he probably doesn't really like it (and Star Trek in general) near as much as he claims.

Most Rehabilitated Character

Lara Croft ☒ Thank goodness Crystal Dynamics finally decided to turn Lara Croft into a human being. No, she's not perfect - but she's so much better than she was. There was a bit too much of her upset and crying (which I chalk up to our combined depictions of women heroes as constantly being emotional, while not letting any of our men heroes show hardly any emotion at all - two sides of damaging gender roles). But there's no denying - between Rhianna

Pratchett's writing, and Camilla Luddington's voice acting, Lara Croft has never been better. And she's headed in a really interesting direction.

Most Convoluted Ending

BioShock Infinite

There's a lot I enjoyed about BioShock Infinite; the stunning graphics and setting, the interplay between Booker and Elizabeth, and the commentaries on American Exceptionalism, religion, and what to do when two warring factions are both equally terrible. But the ending was about as confusing as the latter seasons of *Lost* (which also - perhaps not un-coincidentally - involved time travel). I'm all for innovation, and I don't necessarily think that it was terrible. At the same time, I wish the game had given me something definitive. Speculation from the audience should come in the middle of the story, not after the end.

Best Film to See on the Big Screen

Gravity

If you haven't seen this film yet, then get thee to a movie theatre! In all my years of theatre-loving with the likes of *Star Wars*, *Lord of the Rings*, and *Harry Potter* (among others) I have never seen another film that demands more the big-screen experience. While the film is exceptional and brilliantly made, no way will it have the same impact on the small screen. This disturbingly plausible depiction of survival in outer space is wrenching and thrilling, and there's nothing like feeling like you're right there with Ryan, watching the destruction of the ISS, or floating out toward nothing with no hope of stopping. Give to Alfonso Cuarón and Sandra Bullock all of the awards, please.

Best Atmosphere

Demon's Souls

From a game most notorious for its difficulty, it's the setting that really won me over. What's more, I really enjoyed the way that difficulty and sense of exploration worked in tandem. Combine the thrill of finding out what's around the next corner, with the very real possibility of encountering something that could kill you with one hit, and it makes for a very tense and engaging experience. Especially given just how well the environments are built. (Except for Valley of Defilement - which is just wandering aimlessly in the dark.) The Boletarian Palace alone is to die for (pun intended).

Best New TV Character

Ichabod Crane

What is it with British men named Tom? On a show that really shouldn't work (really, really shouldn't work) that manages to function incredibly well on the shoulders of a very absurd premise, Crane has risen above as the best new character of the fall season. In a change from Irving's original wilting and superstitious school teacher, Crane is

fastidious and proper, all the while bold, intelligent, and very, very capable. What's more, the show milks a ton of humor and drama out of his adjusting to life in the 21st century. And it succeeds based on his character (and resulting relationship with Abbie) alone.

Best New Film Character/Actor

Loki

Do I really need to explain this one? I'll just leave this picture here and let anyone who reads this contemplate the awesomeness that is Tom Hiddleston as Loki Laufeyson, while I get back to trying to convince my sister to let me buy a cardboard cutout for the living room.

Most Tedious Gameplay

Heavy Rain This game has lovely graphics, an aptly composed soundtrack, and a decent story. But oh my, is the gameplay eyeblood-inducing. It's even worse than The Walking Dead (walk around in a confined circle until you find the prompt for the correct item) because it's not just QTEs - it's QTEs on steroids. All it really shows is that the mundanities of life don't make for interesting gameplay. And that the success of a repeated task that boils down to the nature of one's reflexes is the opposite of an interesting or legitimate challenge.

Sugar gliders: high IQ marsupials (2013-12-25 10:42)

Have you ever wanted a rat-sized marsupial that has the IQ of your Golden Retriever? They cost \$250 - \$800 depending on their color. The cheapest is the common greys. People like buying them, because sugar gliders have Dog IQs in a rat-sized body. For example, they can translate words like cookie, their name, sit, come here, food, go bathroom. The K-9 Units can use Sugar Gliders to sniff drugs and bark like a dog!

Christmas (2013-12-25 11:04)

St. Nicholas & parents gave me a new office chair, Windows 8.1 Enterprise, Sony Cybershot DSC-RX100, 32 GB SDCard.

Now I have the #1 Sony Camera at Flickr and the #1 Nikon camera on Flickr

Diablo 2: Lord of Destruction v1.10: Best online PC game in 2003. (2013-12-26 18:44)

iii

25: Suikoden II:

Kicking off the list is a title that most RPG fanatics will probably recognize, even though it doesn't have the immediate name recognition that some of the other titles enjoy. Developed by Konami and masterminded by Yoshitaka Murayama, the Suikoden series sets itself apart from its PlayStation era contemporaries with its deep RPG systems, strategic combat, and sprawling fiction. Each entry features the "108 Stars of Destiny", which in most entries means

108 distinct party members. That's pretty impressive by any standards. While the franchise is chock full of great games, Suikoden 2 probably shines the brightest. Unfortunately, it'll take some good luck getting a copy these days.

24. Jade Empire:

It's no secret that the phrase "Role-Playing Game" is synonymous with a fantasy setting featuring Wizards, spells, enchanted items, and dungeons to crawl.

However, this was not the case with Jade Empire, a game that manages to forgo all cliches in favor of embracing an entirely new and unique setting in a kung-fu adventure feeling like something ripped straight from Crouching Tiger, Hidden Dragon.

It didn't necessarily have the most in-depth skill-building system, but what it lacked in depth it more than made up for in storytelling and unique counter-based combat. Jade Empire was an engrossing and engaging experience more than deserving of a spot on the list of the top 25 RPGs of all time.

23. Kingdom Hearts II:

Talk about taking a unique conception and improving on it just about every aspect. The original Kingdom Hearts was such a weird but satisfying game. Seeing Disney favorites on the same screen as Squall, Cloud, and Sephiroth was a sight to behold. With the sequel, Square-Enix managed to take all expectations the first one had (and any the sequel conjured up) and shattered them all. The gameplay was much smoother, the graphics were better (no more barbie lips on Sora), the Drive system kept combat fresh, and the story took a turn for the interesting. Kingdom Hearts 2 really made the series stand out and become a favorite among RPG fans. It was because of this sequel that the series is still successful and has so many more games out there. Even for fans who don't play the non-numbered games, they'll still be extremely excited for Kingdom Hearts 3 because of this game.

22. Dragon Age: Origins:

Stepping out of Dungeons & Dragons' shadow, BioWare created one hell of a world and lore with Dragon Age. This modernization of the Baldur's Gate gameplay brought together strategic gameplay, intense story, engaging characters, plenty of customization, and lore you could sink your teeth into for days at a time. Dragon Age successfully took a mastered formula that once only belonged in the Forgotten Realms and brought it to the rest of the gaming world. No longer was this kind of gameplay put aside for its ties to D & D or being labeled as too hardcore to play. For that, and how epic the game actually was, Dragon Age: Origins needs to be commended.

21. Phantasy Star IV:

It's hard to argue the inclusion of this classic gem on this list. Phantasy Star was one hell of an RPG series before evolving into the online hit on the Dreamcast. Even though it was a big hit with the RPG games back during the Genesis era, the series really hit the spotlight with the fourth entry to the series. Phantasy Star IV featured engaging characters, a frantic and intense storyline, and an unforgettable experience. It was one of the earliest examples of an RPG being amazing across the board in gameplay, story, design, characters, and soundtrack.

20. Wild ARMs:

Another excellent PlayStation era RPG, Wild ARMs is basically Firefly before Firefly was a thing. Blending modern technology, monsters and magic with a Western motif made for a compelling universe, and Wild ARMs brought the gameplay chops to back it up. Each of the three characters have individual tools and skills that assist in solving the excellent puzzles and defeating the often jaw-dropping enemies you encounter throughout. Whether it be Rudy's titular ARMs, Cecilia's magic creation system or Jack's sword techniques, each character brings a unique skill set to the group, and the game ends with one of the more dramatic twists in gaming. Wild ARMs spawned a number of quality sequels, but never really earned the success it deserved.

19. Disgaea: Afternoon of Darkness:

If you asked me what RPG contained the most content, I would answer with Disgaea: Afternoon of Darkness. This is a game with a serious amount of depth that manages to not take itself seriously at all. The story, setting, and character make for some of the quirkiest in games, but you'll be hard pressed to find a game series that gives you this much to do, find, and conquer. Afternoon of Darkness is the definitive version of the first Disgaea and it was this game that really took the strategy and RPG combination to its limits. Your characters have levels, your items have levels, there are story dungeons, side dungeons, and your items even have dungeons. You can't turn around without finding something to do in this game.

It isn't just the content that really gives Disgaea the credit for being on this list, though. Disgaea features some of the best things Final Fantasy Tactics had and improvements to help this combo of genres become a very popular one.

Tactics may have come first, but Disgaea opened the flood gates for potential.

18. Persona 4 Golden:

It takes a lot to have a game that will encompass all of your time and thoughts while completely engrossing you in the experience. While Persona 4 Golden isn't the only game like that on this list, it is the most recent. Even though the original came out in 2008, Golden adds a lot to the game even for previous players to come back and play through again.

What makes P4G so amazing is how much you care for the cast of characters and what they are going through. You do something in this game that you don't do in any other. You have to help the characters face their true selves and come to terms with their feelings. You have to help them all see the truth and harness that into power. It is through this truth that the main character and his friends are able to combat those who would hide the truth forever.

P4G takes you inside the minds of a game's characters and even makes you wonder about yourself and the truths you ignore. That's a powerful thing for a game to do, making it one of the most impressive games seen in years.

17. Dark Cloud:

An early example of the brilliance developer Level 5 would come to be known for, Dark Cloud showed that the RPG genre still had plenty of room for innovation. While the story wasn't exactly a masterpiece and the randomized dungeons could become a little repetitive, Dark Cloud earns mad points for its intricate player and weapon leveling systems, unique combat and, most importantly, its blending of sim elements into the game. Throughout the adventure, the player collects a resource named Atla which is used to rebuild the world in a manner of the players choosing, reminiscent of the SNES cult classic ActRaiser. It wasn't perfect, but Dark Cloud scratched an itch most of us didn't even know we had.

16. Dragon Quest VIII:

There's so much you could pull from Dragon Quest for this list but ultimately VIII felt like the jump the series needed to once again hit the spotlight. Before this game it almost felt like the series was growing dull. But when you have an entry being talked about more than Final Fantasy X and many other RPGs that graced the PS2 at this time, you know you have a winner on your hands.

Featuring the classic art from Akira Toriyama, Dragon Quest VIII shattered fan's expectations and churned out one of the best experiences on the PS2, which is quite a feat considering how many there were on the console.

15. Baldur's Gate II:

You can't include anything from Dragon Age or Knights of the Old Republic without giving a nod to the big guy that came before. Baldur's Gate, and really everything from Forgotten Realms at this time, was instant gold to fans. Whether it was this series, Icewind Dale, Temple of Elemental Evil, or Neverwinter Nights, Baldur's Gate managed to always come up in conversation and it is one of those rare titles that is automatically re-installed whenever you mention it. The iconic gameplay, party management, character creation, and experience would be replicated over and over again and evolved many times over the years. From Neverwinter Nights to Knights of the Old Republic

to Dragon Age, Baldur's Gate's legacy lives on as a genre definer and an example of masterful RPG combat and storytelling.

14. EarthBound:

Known as Mother in Japan, EarthBound achieved a devoted following before it ever released in North America. Despite a successful port of the second game in the series, most U.S. gamers know protagonist Ness more from his Smash Bros. appearances than the series he spawned from. However, those who have played the game got to experience one of the most unique RPGs ever created. A far cry from the sword, magic and monsters motif of most RPGs of the time, EarthBound featured clever and original characters, interesting physics components and writing that is far deeper than the standard RPG fare. Numerous theories have been set forth about the unusual ending, but like any good story, EarthBound makes you think without giving away all the answers. Simply put, EarthBound is one of the best narratives in gaming.

13. Final Fantasy Tactics: The War of the Lions:

While strategy RPGs are common, it's hard to find one nearly as refined and as well developed as that of Final Fantasy Tactics. With a complex leveling system and the ability to assign new jobs to party members, Tactics takes customization to a new level, allowing players to build their party in nearly any way they see fit to do so. On top of that, the battle system is engaging and requires a fair amount of skill and strategy in order to be successful, and it manages to maintain the same depth of narrative seen in the many other games in the Final Fantasy franchise. It's a

definite beacon in the Strategy RPG genre, and one that simply shouldn't be overlooked.

12. Super Mario RPG: Legend of the Seven Stars:

A game that tends to get overlooked both in Nintendo and Squares catalog, this seemingly strange mashup won gamers over with its interesting combat, well-written dialogue and surprisingly well-fleshed out world. I'm going to go ahead and say it: Super Mario RPG features the best iteration of the Mushroom Kingdom ever. Period. The active battle system, which tasks players with entering timed button presses to boost their attack, magic and defense, makes the combat some of the best of its time, while the Mario license help bring in a number of people who might never have played an RPG before. Add in a well-done soundtrack and a quirky, off-beat sense of humor that totally hit the mark, and Super Mario RPG is a cult favorite that helped bring RPGs into the mainstream.

11. Final Fantasy VII:

What can be said about Final Fantasy VII that hasn't been said already? One of the best known RPG ever, Final Fantasy VII cemented Final Fantasy as the leading name in RPGs, and proved that the PlayStation was for real. What exactly makes FFVII so loved? It's hard to pinpoint.

Maybe it's the excellent cast of characters. Cloud remains of the most popular protagonists ever, and the people that gather around him move the story forward in myriad interesting ways.

Or, it could be the refined role-playing mechanics. Materia is still one of the best magic systems in the genre, and the vast world, many secrets, and refined combat hit on all the high spots a good RPG needs to have. Or perhaps it's all because Sephiroth is hands down one of the best antagonists ever. Whatever the reason, Final Fantasy VII is one of the most loved games ever, and this list simply wouldn't be complete without it.

10. The Elder Scrolls V: Skyrim:

While many games throughout history have promised total player freedom, few have embraced it in the way Bethesda did with Skyrim. From the lonliest of towns to the grandest of mountains, nothing is out of reach in Skyrim, and few games have ever been able to capture a fraction of the breadth that game features. Skyrim is one of those rare games that never play the same way for any two people, and swapping stories of your experiences in Skyrim like war tales has become something many fans are wont to do. Add to that its ability to become a cultural phenomenon and inspire many various memes and inside jokes, and you've got a pretty compelling case to say that Skyrim is a modern fantasy masterpiece.

9. Fallout 3:

War. War never changes, and neither does Bethesda's legacy of making fantastic and immersive RPGs. Making the jump from an isometric view to a fully-realized first-person perspective isn't something many games manage to do gracefully. Not so, however, with Fallout 3. The game took to the new approach well, embracing the feel of an FPS and complementing it with a unique environment and battle system that made up for somewhat wonky combat.

But it's not the mechanics or the perspective that make Fallout 3 so great. Rather, it's the atmosphere the game had and the story it told. In a market littered with post-apocalyptic games, Fallout 3 manages to still feel completely

different and unique in the tone it sets and the world it creates. There's depth to the game's lore, fascinating characters to meet, and an amazing sense of the world that no other game has been able to re-create on the same level. It's been a genre-defining game of the past generation, and for that, it's more than deserving of a spot in a list of the greatest RPGs of all time.

8. Diablo 2:

There are some games that stick with you for some time and then there's Diablo 2. I've been playing this game since 2000 when I secretly installed it on every computer in my grade school. No matter what class I was in, if we had computer time, I was slaying demons and not caring at all where I put my skill points. Later on I got really into builds and coming up with some great characters. It was all about reaching Hell difficulty and just being able to survive the Den of Evil. My Hammerdin and I really laid the smackdown from the Highlands to Arreat Summit for a long time. Diablo 2 is another one of those games that someone reinstalls whenever they hear about it. It's an experience that sticks with you and defines an entire genre. Hell, most of the games that released after Diablo 2 that resembled it were called "Diablo clones". That says something. Blizzard hit all of the right points with Diablo 2 and the fact that it is still played worldwide today shows how great its legacy is.

7. World of Warcraft:

MMOs aren't for everyone, but they can give you some of the most dynamic experiences in gaming. World of Warcraft is not only the biggest RPG on this list, it is also played monthly by over 10 million people worldwide. After four expansions and untold amounts of patches and updates, WoW has transformed massively from what it used to be back in 2004-2006 before Burning Crusade released. Back during Vanilla WoW, I still remember running the Primordia guild on Arygos and raiding Molten Core, Onyxia's Lair, and Blackwing Lair every week with 39 other players. That game gave me some of the most epic moments in my gaming career. Watching my guildmates and I take down Ragnaros for the first time was not only a sight to see but it was an accomplishment I'll never forget. Even later on down the line in Wrath of the Lich King, just going through the whole Icecrown Citadel and fighting against The Lich King is something I'll always look back on.

World of Warcraft gives players the opportunity to see and do things you never thought possible. Because of that, it is hard not to think of this game as one of the best RPGs of all time. It offers the most content of any RPG, and the experiences you can have in it are unparalleled.

6. Pokemon Crystal:

At a time when Pokemon was really hitting its stride in the popularity train, Pokemon Crystal became the definitive version of its generation and continues to be one of the best Pokemon games ever made.

It took all of the amazing elements of Red, Yellow, and Blue and completely re-imagined them in all the right ways. On top of that, it also introduced a plethora of new Pokemon, Dark and Steel-types, boasted 16 gym badges, 2 Champions, Suicune, and featured moving sprites that set the bar for the other Pokemon games going forward. It not only raised the bar for Pokemon games back in its early days on the Game Boy Color, it also paved the way for their continued existence today. Being that the Pokemon games are some of the most popular on handheld devices, we felt this had to be included in the top ten games of this list.

5. Star Wars: Knights of the Old Republic:

Before this game there was very little Expanded Universe content in Star Wars games that didn't involve a Skywalker or Solo. When Knights of the Old Republic was released, fans were able to depart the Rebellion Era (and part of the New Jedi Order Era) and go back in time to when Luke and Vader would be considered weaklings next to the force wielders in the Old Republic Era. Aside from the lore aspect, Knights of the Old Republic was basically an evolution of the Baldur's Gate-like gameplay that was very popular in the 90's and early 2000's. But this time, we controlled a main character we built from scratch to figure out his past and why he was so important to the survival of the Jedi Order and the Republic.

Knights of the Old Republic offers players one of, if not the most, highly regarded plot twists ever. Its story is nigh impossible to beat in terms of the emotion that rushes through you when you reach the climax of the game.

4. Final Fantasy VI:

Newer gamers may not understand why we speak of Final Fantasy with such reverence, but FFVI is a perfect example of why it was, at one time at least, the premiere name in RPGs. It does so many things right that it's almost hard to find fault with it. Each character in the huge roster brings something unique to the team, and they elevate the story far above what most games offer. The Esper system is an incredibly addictive way to level your players and magic, and the insane number of sidequests and secrets ensure that even the most dedicated of gamers will never run out of content, and the game is literally packed with moments that would be the high point in most other games: the opera scene, the creepy Ghost Train and the destruction of the entire world are just a few of the incredible watercooler moments the game offers, not to mention Kefka, one of the most delightfully mad antagonists seen in gaming. Final Fantasy VI isn't just one of the best RPGs you can buy, it's one of the best games ever made.

3. Secret of Mana:

An often criminally overlooked game in Square's stellar catalog, Secret of Mana was doing things on the SNES that the genre wouldn't fully embrace until years later. The real-time combat was light years ahead of the boring turn-based system that still hasn't been completely phased out. Not only could your characters level up like in any good RPG, but your individual weapons and magic could level up as well, and took on new abilities by doing so. The art style was unique and beautiful, and is backed by one of the most stunning video game soundtracks of all time. If it only featured a better story, it would have a legitimate shot at number one, but as is it remains one of the best-aging RPGs on the list, and is a testament to the fantastic design prowess of its all-star cast.

2. Mass Effect 2:

Few games in history have ever been able to capture the magic of Mass Effect. From the story to the mechanics, the series is comprised of some of the greatest games ever made.

But it was Mass Effect 2 that realized the series' potential to its fullest, building on the decisions made by the player and the expansive universe backing the franchise and creating a veritable masterpiece complete with impressive set pieces, fluid gameplay, great presentation, and well-paced storytelling. Mass Effect 2 is the best entry in a series that has helped define this generation and has capitalized on all the most important conventions of a great RPG. For that, it's one of the best RPGs ever made.

1. Chrono Trigger:

What makes a great RPG? That's the question at stake here. It's why this list is here in the first place. It wasn't easy establishing the exact criteria, but there are a few common factors that most people can agree on. Fun combat, solid leveling systems, a good narrative and an artistic audio/visual experience seem to be givens, but we also took into account characters, innovation, the lasting legacy of the game and intangibles as well. On all these counts, Chrono Trigger knocks it out of the park. The unique dual and triple technique system rewards you with distinct attacks for every combination of characters, gives each party layout a distinct feel, and each has a slew of abilities waiting to be experimented with. The branching story and myriad alternate endings are as well-told as they are numerous, and trying to find them all is half the fun. Throw in a memorable art style and a top-notch orchestrated soundtrack and you have a complete game experience that is second to none. Chrono Trigger has everything you could want in an RPG, and is our choice for the greatest role-playing game ever made.

Ultimate Antman (2013-12-26 21:31:48)

I do like your selection of RPGs, even though, I may not have picked out the same games.

16. 2014

16.1 January

Start Menu for Windows 8 / Windows 8.1 (2014-01-01 04:35)

I read the new Windows 8.1 reviews as well as the old Windows 8 reviews, and download Classic Shell (5.4 Megabytes).

There are morons who downgrade to Windows 7 service pack 1. This isn't safe. Windows 7 has kernel 6.1 while Windows 8.1 has kernel 6.3. Classic shell fixes the problem.

The Windows 8 & 8.1 reviews are all stupid on this subject matter.

Impeachment process started! (2014-01-01 18:27)

Ahhh... Raising money through paranoia. The DNC is a master at it. But is it really paranoia when they are truly after you? Impeachment is a real and growing possibility for the Marxist-in-Chief and many of us relish the coming clarifying event of historic proportions. I would pay everything I have for a front row seat and popcorn. I will record the proceedings and pass them on to my children, grandchildren and great grandchildren. I will play them at family gatherings and events. This Presidency and all his followers are THE most corrupt in history. When their bottomless nefarious deeds are dragged, screaming and bleeding into the light of day, you won't need sitcoms or reality TV – it will be a blockbuster to remember, trust me. Last night, the DNC sent out a panicky, beseeching email blegging for money because the big, bad Republicans are going to impeach Dear Leader. Let me clarify that... the ones with a spine are coming after him and there are very few of them. But what they lack in numbers, they make up for in courage and ethics. The Daily Caller made my evening – literally: The Democratic National Committee (DNC) sent out a paranoid email Saturday evening urging supporters to vote for Democrats so that Republicans can't impeach President Obama. The email, subject line "Impeachment," was sent to Obama for America supporters, imploring them to contribute to the DNC's 2014 efforts. "What do these people all have in common?," the email asked, featuring quotes from Republican Sen. James Inhofe of Oklahoma, Rep. Michele Bachmann of Minnesota, Rep. Kerry Bentivolio of Michigan, and Rep. Blake Farenthold of Texas discussing the possibility of impeaching Obama for one of his numerous instances of presidential misconduct. The DNC email discussed the "I-Word" and said that "Republicans are actually excited about the idea." "Show these Republicans that they are way, way off-base, and give President Obama a Congress that has his back," according to the DNC email, noting that Democrats need to win 17 GOP House seats to reclaim a majority. The beasts under our beds are here folks and they wear Armani suits and Prada heels. They covet power and wealth and tell us that only they know what is best for the American riffraff, who only cling to their Bibles and guns. They are Communists and they despise you and America. I say impeach Obama with prejudice and prosecute the lot of them. Long jail terms all around and we should no longer fear the term "treason." Oran's Dictionary of the Law (1983) defines treason as "...[a]...citizen's actions to help a foreign government overthrow, make war against, or seriously injure the [parent nation]." The US Constitution defines treason in Article 3, section 3 thusly: "Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court." Witnesses are lining up as we speak. Obama has done this over and over... enabling Islamic countries such as Iran against us, handing the keys to the kingdom to Russia and China and breaking America financially and militarily to serve us up to other countries on a treasonous platter. The devil has been celebrating

the demise of the last hope for the free world – but the devil can go down to Hades and stuff it. Justin Amash got it right when he said that Obama’s expansion of executive branch authority is “setting the stage for something very dangerous in the future.” Obama has basically made the executive branch the controlling body, making the judicial and legislative branches merely parrots of his policies. They have been compromised and neutered. Obama does not bother with Constitutional practices, but instead uses diktats to further his agenda. Treating the American people as the Proletariat, Obama has seriously underestimated us. We do not bargain for security, hiding behind diplomacy and forked tongues. Slaves are made in such ways. Any other president in history would have been brought down and impeached for any one of these scandals: The NSA Debacle IRS Persecution of Conservatives and Tea Party Groups Obamacare Amnesty Fast and Furious Benghazi The Silencing of Journalists and Bloggers and the Use of the Lapdog Media as a Propaganda Tool Worthy of Goebbels Printing Money and The National Debt Consorting with Known Terrorists and Enabling Terrorist Activities Bringing Foreign Entities into Our Intelligence and Scientific Agencies Union Collaboration Enabling and Promoting Marxist/Communist Entities Election Fraud Inciting Racial Unrest Presidential Excess – Vacations, Parties, etc. Violating Every Aspect of the US Constitution Responsibility to Protect The Gutting and Marginalizing of Our Military The Mistreatment of Allies, Especially Israel The Redistribution of Wealth The Gutting and Marginalizing of Our Intelligence Agencies Religious Persecution of Christians Unconstitutional Laws Against the 2nd Amendment Unconstitutional Search and Seizures Taxation Without Representation Committing Unauthorized Acts of War Manipulation of the Financial Markets And that is only a very partial list. The greatest hits list goes on and on and on. It’s a disgrace we have let this go on this long and it is due to Progressives on both sides of the aisle putting money and power ahead of their constituents. A silent coup is taking place with enemies within and without in our government and Obama is leading the charge. Impeachment... hell, yeah! In fact, both the DNC and the RNC should be very, very afraid. The RNC is coming after the Tea Party and we’re coming after all of you: Even though Karl Rove’s American Crossroads brand has been damaged after the group declared war against conservative candidates, the group will reportedly try to influence the 2014 midterm elections by bullying campaigns and creating groups that, on the surface, do not seem to be affiliated with them. We will not let our Republic fall and Karl Rove and the rest of the Progressive RINOs can go know themselves and pound sand: The battle for the heart and soul of the Republican Party has begun. On one side is the Tea Party. On the other side stand Karl Rove and his establishment team, posing as tacticians while quietly undermining conservatism. Progressives see impeachment for Obama on the Marxist horizon and Americans see the reinstatement of the Republic. The halls of power need a good scrubbing and cleaning out and the Tea Party is up to the task. Aim small, miss small, boys.

2.2 Trillion to repair US Infrastructure (2014-01-02 23:45)

ou can tell a lot about a nation by the condition of the infrastructure. So what does our infrastructure say about us? It says that we are in a very advanced state of decay. At this point, much of America is being held together with spit, duct tape and prayers. Our roads are crumbling and thousands of our bridges look like they could collapse at any moment. Our power grid is ancient and over a trillion gallons of untreated sewage is leaking from our aging sewer systems each year. Our airports and our seaports are clogged with far more traffic than they were ever designed to carry. Approximately a third of all of the dam failures that have taken place in the United States since 1874 have happened during the past decade. Our national parks and recreation areas have been terribly neglected and our railroads are a bad joke. Hurricane Katrina showed how vulnerable our levees are, and drinking water systems all over the country are badly outdated. Sadly, at a time when we could use significant new investment in infrastructure, our spending on infrastructure is actually way down. Back during the 50s and the 60s, the U.S. was spending between 3 and 4 percent of GDP on infrastructure. Today, that figure is down to about 2.4 percent. But of course we don’t have any extra money to spend on infrastructure because of our reckless spending and because of the massive amount of debt that we have accumulated. While the Obama administration is spending more than half a million dollars to figure out why chimpanzees throw poop, our national infrastructure is literally falling apart all around us. Once upon a time nobody else on the planet could match our infrastructure, and now we are in the process of becoming a joke to the rest of the world.

The following are 21 facts about America's failing infrastructure that will blow your mind....

- #1 The American Society of Civil Engineers has given America's crumbling infrastructure an overall grade of D.
- #2 There are simply not enough roads in the United States today. Each year, traffic jams cost the commuters of America 4.2 billion hours and about 2.8 million gallons of gasoline.
- #3 It is being projected that Americans will spend an average of 160 hours stuck in traffic annually by the year 2035.
- #4 Approximately one-third of all roads in the United States are in substandard condition.
- #5 Close to a third of all highway fatalities are due "to substandard road conditions, obsolete road designs, or roadside hazards."
- #6 One out of every four bridges in America either carries more traffic than originally intended or is in need of repair.
- #7 Repairing all of the bridges in the United States that need repair would take approximately 140 billion dollars.
- #8 According to the U.S. Chamber of Commerce, our decaying transportation system costs the U.S. economy about 78 billion dollars annually in lost time and fuel.
- #9 All over America, asphalt roads are being ground up and are being replaced with gravel roads because they are cheaper to maintain. The state of South Dakota has transformed over 100 miles of asphalt roads into gravel roads, and 38 out of the 83 counties in the state of Michigan have transformed at least some of their asphalt roads into gravel roads.
- #10 There are 4,095 dams in the United States that are at risk of failure. That number has risen by more than 100 percent since 1999.
- #11 Of all the dam failures that have happened in the United States since 1874, a third of them have happened during the past decade.
- #12 Close to half of all U.S. households do not have access to bus or rail transit.
- #13 Our aging sewer systems spill more than a trillion gallons of untreated sewage every single year. The cost of cleaning up that sewage each year is estimated to be greater than 50 billion dollars.
- #14 It is estimated that rolling blackouts and inefficiencies in the U.S. electrical grid cost the U.S. economy approximately 80 billion dollars a year.
- #15 It is being projected that by the year 2020 every single major container port in the United States will be handling at least double the volume that it was originally designed to handle.
- #16 All across the United States, conditions at many of our state parks, recreation areas and historic sites are deplorable at best. Some states have backlogs of repair projects that are now over a billion dollars long....
More than a dozen states estimate that their backlogs are at least \$100 million. Massachusetts and New York's are at least \$1 billion. Hawaii officials called park conditions "deplorable" in a December report asking for \$50 million per year for five years to tackle a \$240 million backlog that covers parks, trails and harbors.
- #17 Today, the U.S. spends about 2.4 percent of GDP on infrastructure. Meanwhile, China spends about 9 percent of GDP on infrastructure.
- #18 In the United States today, approximately 16 percent of our construction workers are unemployed.
- #19 China has plans to build 55,000 miles of highways by the year 2020. If all of those roads were put end to end, it would be longer than the total length of the entire U.S. interstate system.
- #20 The World Economic Forum ranks U.S. infrastructure 23rd in the world, and we fall a little bit farther behind the rest of the developed world every single day.
- #21 It has been projected that it would take 2.2 trillion dollars over the next 5 years just to repair our existing infrastructure. That does not even include a single penny for badly needed new infrastructure.

So where did we go wrong?

Well, one of the big problems is that we have become a very materialistic society that is obsessed with short-term thinking. Investing in infrastructure is something that has long-term benefits, but these days Americans tend to only be focused on what is happening right now and most politicians are only focused on the next election cycle.

Linux Mint 16 review (2014-01-03 15:01)

I uploaded Scientific Linux 6.5 on Youtube. There is absolutely nothing that SL 6.5 can do that SL 6.4 cannot. I just had the opportunity and took it. I downloaded Linux Mint 16 and nothing changed. Mint 16 upgraded MATE 1.6.0 to MATE 1.6.2. Linux Mint 16 is less stable then Linux Mint 15 for the shutdown sequence. The log says that INIT completes all but turning it off.

Cable TV screws us gamers (2014-01-04 19:12)

That evil cable TV is even more evil now. The ISPs see cable TV as a total disaster so they need bandwidth caps on the Internet so you cannot view a lot of streaming video. That means I am stuck with buying \$20- \$40 Blurays and DVDs that I only watch twice and glorious DirecTV.

^ The only way to get whats on cable 24/7/365 at low price anymore

If you're a gamer, internet service provider data caps are an important topic of conversation. Actually, if you're a fan of broadband-reliant entertainment at all, you need to think about limits on bandwidth. But as the games industry marches forward into digital distribution with no sign of stopping, heightened regulations on internet usage are an increasing problem. The providers have long-stated data caps are a plan to make internet access fair for everyone, but the limits are in direct opposition to the interests of gamers.

Who is Capping and Why?

✕

Unfortunately, ISPs are actually doing very little to distribute those costs fairly. While it's completely reasonable to charge more to users with higher bandwidth usage, such "tiered" plans rarely offer lower-cost plans for those

using less data. Instead, ISPs yank up the baseline price for heavier users, increasing their total revenue. And little of the money brought in by ISPs is reinvested into infrastructure to curb bandwidth problems. According to Wired, Time Warner Cable made \$1.13 billion in revenue from broadband in the first quarter of 2011, but only reinvested 3-percent on improving its networks.

Gaming Data on the Rise

Downloadable game distribution is more prevalent year-over-year, driving down sales at traditional brick-and-mortar retailers. While bigger triple-A titles still make a significant dent on the market in the form of physical copies, we're also on the cusp of the next generation of home consoles. Will Microsoft, Sony, and Nintendo continue to push for digital via their own marketplaces? Absolutely.

Take a look at this chart, showing my own recent internet usage from Time Warner Cable. You've probably noticed a steady increase from October through January, and there's a very simple explanation: I downloaded a bunch of games and watched a lot of streaming movies in those months. The holidays are a time of increased media releases, and so my bandwidth increased. Now imagine how that same chart will look, year-over-year, as videogame downloads bulge. Games, for the most part, are not getting any smaller.

The Call of Duty series is undoubtedly one of the most popular game franchises in the world, and we can learn a lot by looking at the history of each iteration's size. On Xbox Live, Call of Duty: Modern Warfare is a 6.5GB download. Modern Warfare 2 is an almost 7GB download. Modern Warfare 3 is a 7.5GB download. Are you sensing a pattern? Half-a-gigabyte may not seem like a huge step, but a 15-percent increase in size is substantial when you're facing big charges from your ISP.

The issue is even greater on the PC side of the games market, where file sizes tend to be larger and physical distribution is already all but dead, thanks to Steam. In short, most gamers will see an increased need for bandwidth as we download more – and larger – titles. And that's not even mentioning the bandwidth required from playing online games.

The games industry, for its part, has taken some contention with data caps, but the message has primarily focused on cable companies prohibitively limiting data to compete with console-based streaming video services. While those arguments are important, developers and publishers also need to recognize the very real consequences of a digital-only future for games. After all, if we can't afford those giant downloads, the industry hurts, as well.

Unless we see more internet service providers separated from the television-side of the business, or the government taking a harder stance on data caps, or the games industry acting more vocally, the problem will persist. But as gamers and consumers, you can also make your voices heard. Late last year, U.S. Senator from Oregon Ron Wyden introduced the Data Cap Integrity Act, largely aimed at keeping the FCC focused on monitoring how caps are being applied. You can write or call your Senator to show support for the bill (it currently has zero cosponsors), and get involved in groups like Video Game Voters Network, the Electronic Frontier Foundation, and the Entertainment Consumers Association. How we use the internet to access our games, and if we can actually continue to afford it, is sure to remain a hot point of contention. Don't get stuck in the middle.

Battlefield 3 - Sergeant major (2014-01-07 06:02)

My Solitaire stats (2014-01-08 16:17)

Digital Cameras came too late (2014-01-09 20:38)

You know how 35mm film you bought at the store wasn't that expensive, but you constantly ran out of it? That was my parents situation in the 1980s and 1990s. I was born, but I have only 200 pictures of myself in a 14 year period. My pictures were taken by a 1985 SLR and 1998 pocket camera. Unlike today's children, I didn't treat it like a fashion show. I didn't do anything out the ordinary on most pictures. By 2005, there was very little to take pictures of, and I could steal all the scenery pictures off Flickr. I had a scanner in the 1990s.

Remember those Generation Z articles I wrote a year ago. Nothing has changed. Generation Z is just about to conquer Generation Y through Youtube, Blogspot, Wordpress, Vimeo, Facebook, Google+ and real life. I can see Generation Z can run me over with a Hitcounter bus on Youtube and outnumber my friends on Goodreads. You're seeing this scenario taking effect. Generation Y and Z share the same anime, Japanese videogames. For example, I watched Dragon Ball Z and Neon Genesis Eva while GenZ watches Fullmetal Alchemist Brotherhood and Death Note. I even saw most of the Nickelodeon and Cartoon Network episodes of the 1990s. As far as videogames, I played Final Fantasy VII on Playstation and GenZ played Final Fantasy XIII.

I grew up in the 1990s so I didn't hear a peep of Critical Theory at all. It was a entire unfair mute point! There was no way I could figure out, because I had 56K Internet. I have them now when everybody knows about them. I growing up years after the cold war, and knew all the presidential quotes.

Mighty Morphin Power Ranger Green with Evil (2014-01-11 04:40)

Mighty Morphin Power Ranger videos (1993) was censored on Youtube and they kept episode 2. They got 11,600 and 4350 hits on there. This is some of the top 10 episodes of the series. It was one of the only ways to go viral on Youtube.

The Green with Evil
The Return of the Green Ranger

Ten Greatest consoles (2014-01-12 10:58)

10. Nintendo (1983) – 61.91 Million

SONY DSCA true classic, the Nintendo Entertainment System was one of the best selling consoles of its time with its 8-bit system. After a video game crash, the Nintendo brought the popularity of gaming back to the world as well as setting the standard for gaming consoles. In 2009, it was named as the single greatest video game console in history. Who can disagree with classics such as Mario, Super Mario, Ninja Turtles, Duck Hunt, and many more of our favorite video games that came from that system?

9. PlayStation Portable (2004) – 80 Million

1280px-PlayStation _Portable _ - _auf _KaroThe PlayStation Portable is a handheld console that uses a disc format as its primary storage medium. It also has the ability to connect to the Internet as well as other PSP's, PlayStation 2's and PlayStation 3's. The disc format for the storage is known as the Universal Media Disc (UMD). Other features of the PSP are the large viewing screen as well as the extensive multi-media capabilities. With so much technological capabilities at the palm of the gamers' hand, the PSP became a hot-selling item after its release.

8. PlayStation 3 (2006) – 80 Million

Black-PS3-playstation-3-3148236-1280-1024The PlayStation 3 was released in 2006 and part of the seventh generation video game consoles and what made the PS 3 stand out from the rest of the competition was the fact that it used Blu-ray discs as its primary storage medium. Sony developed the PS3 and the hype surrounding the console made it one of the most anticipated releases of the year. The PS3 was first released in Japan with North American and European releases following soon after.

7. GameBoy Advance (2001) – 81.51 Million

1280px-Game-Boy-Advance-1stGenImagine having a 32-bit gaming console in the palm of your hands, chances are you were probably imagining the GameBoy Advance, which was the successor to the GameBoy Color. What made this particular handheld device exceptionally popular was that it marked the return of the old school Nintendo games like Super Mario, Bros. but this time with color quality even better than the original. Even with many competitors around the industry at the time, the GameBoy Advance still maintained consistent sales as well as Nintendo's market share.

6. Xbox 360 (2005) – 82.9 Million

xbox-360-2 _wallpapers _3946 _1280x1024The Xbox 360 was released in 2005 and developed by the Microsoft Corporation and was the successor of the original Xbox, which was released in 2001. The 360 was first unveiled on MTV in May of 2005 with details of the upcoming release. The console was a direct competitor with the Nintendo Wii and the PlayStation 3, with the idea of the newly innovated console first conceived in 2003. What made the Xbox stand out was the "Xbox Live", an online service that allows to purchase subscriptions, stream music and movies, online gaming, and more.

5. Wii (2006) – 100.9 Million

Nintendo-Wii-1024x1280The Wii system was released right before the Thanksgiving holiday in 2006 and was a direct competitor with Microsoft's Xbox and the PlayStation 3. But what made the Wii different from any console that had existed before was the controller, which is a battery operated pointing device that can detect movement in three dimensions. The Wii was actually inspired by the Nintendo GameCube and the idea was first conceived in 2001 and went through several years of development until its release.

4. PlayStation (1994) – 102.49 Million

1280px-Playstation-console-no-contThe PlayStation (known as PS) was first introduced in 1994 and was the first console to surpass 100 million units sold (of its time). It was known as a computer entertainment platform due to its extensive 32-bit technology and utilizing CD-ROM to read the game software. The PS was eventually discontinued in 2006, but remained as one of Sony's more successful consoles until the PS2 was released. In an industry that was

dominated by Nintendo and Sega, Sony really set a new standard for consoles that made it the success that it was.

3. GameBoy (1989) – 118.69 Million

Nintendo _Game _Boy, _Game _Boy _Pocket, _Game _Boy _Light _and _Game _Boy _Color _Tietokonemuseo Nintendo's second handheld device was introduced in 1989 and was an 8-bit console known as Game Boy, and then a color version known as the GameBoy Color, which was released in 1998. Between the two versions of the device, GameBoy has sold over 118 million units until the devices were discontinued in 2003. The device was able to interchange different games with game cartridges so users weren't stuck with just one game. GameBoy would set a standard for handhelds in the industry and inspired technology for future devices made by Nintendo.

2. Nintendo DS (2004) – 153.98 Million The Nintendo DS is a handheld console that has not one, but two screens that work together in tandem. It became a huge hit in the gaming world since its release in 2004. The bottom screen is a touch screen, as well as features microphone and wireless connectivity, giving gamers the capability to play together in the same game as long as they're close together and on the same Wi-Fi connection. The handheld console was meant to compliment the GameCube and GameBoy advance, but sales quickly proved that Nintendo created something special with the DS. A follow up to DS was developed called the Nintendo DS Lite, which was a smaller version of the original, but still didn't sell as well as the original.

1.1. PlayStation 2 (2000) – 155 Million The PlayStation 2 (or PS2) is the best-selling gaming console in history with over 155 million sold since its release in 2000. It was first released in Japan in March and then the PS2 had a North American and European release that followed soon after. Over 3800 games have been developed for the system with over a billion games sold in total. As one of the 'sixth generation' of consoles, this console was released with competition from notably less successful units like the Dreamcast Sega and Nintendo's Gamecube, and the more successful Microsoft Xbox. It has since, of course, trumped all of these. Sony announced that in 2013, the PS2 had ceased production – after a hugely successful 12 year run. So if you haven't yet got your hands on a PS2, do so before functional units become truly rare and correspondingly expensive!

Dogmatics (2014-01-13 17:06)

A very nice Christian dogmatics book by John Theodore Mueller.

<https://archive.org/details/Mueller>

The book is public domain. This book is great to argue against Crypto-Calvinists, Crypto-Mormons, Crypto-Catholics, Crypto-Methodists, and those awful Jehovah's Witness who come to your door.

100 best Power Ranger episodes (2014-01-15 12:28)

100. A Father's Footsteps (Wild Force)
99. Down and Dirty (Ninja Storm)
98. Stranger Within Part 1 & 2 (Mystic Force)
97. A Gem of a day (Ninja Storm)
96. Out of Luck (Operation Overdrive)
95. Light Source (Mystic Force)
94. Things Not Said (Operation Overdrive)
93. Forest for the Trees (Samurai)
92. Sticks and Stones (Samurai)
91. To Earn Your Stripes (Jungle Fury)
90. Welcome to the Jungle (Jungle Fury)
89. Legendary Catastros (Mystic Force)
88. Lionheart (PRWF)
87. The Strange Case of the Munchies (Super Samurai)
86. Curse of the Wolf (PRWF)
85. Gate Keeper (Mystic Force)
84. Fight Fire with Fire (Super Samurai)
83. Clash of the Red Rangers (Samurai)
82. Return of Thunder Part 1, 2, 3 & 4 (Ninja Storm)
81. Clash of the Megazords (Turbo)
80. Double-Edged Blake (Ninja Storm)
79. Burning at Both Ends (PRDT)
78. A Matter of Trust (PRLR)
77. Pizza Slice of Life (Jungle Fury)
76. Party Monsters (Samurai)
75. Bad to the Bone (Jungle Fury)
74. The Lone Wolf (PRWF)
73. Shift into Turbo Parts 1, 2 & 3
72. The Thunder Strangers Part 1, 2 & 3 (Ninja Storm)
71. Prelude to a Storm (Ninja Storm)
70. Ryan's Destiny (PRLR)
69. Destined for Greatness (PRLR)
68. Robo Knight (Megaforce)
67. Mega Mission (Megaforce)
66. A-Bridged (SPD)

- 65. Trial By Fire (PRLR)
- 64. Perception (SPD)
- 63. Facing the Past (PRLR)

16. Lost and Found in Translation (PRDT)
15. Green Candle Parts 1 & 2 (MMPR)
14. Green No More Part 1 & 2 (MMPR)
13. Changing of the zords (MMPR)
12. Return of an Old Friend Parts 1 & 2 (MMPR)
11. Rangers Gone Psycho (In Space)

Here we go, the top ten...

10. White Light Part 1 & 2 (MMPR)

There were bets in the playground to who was going to be the White Ranger. Fans wanted it to be Tommy very badly. There was sighs of relief when the White Ranger took off his helmet in the Command Center. Originally Brad Hawkins (Ryan of VR Troopers) was set to be the White Ranger and Jason David Frank was to have his own show but because of Tommy's popularity, they switched places. JDF (at the Florida Supercon last week-July 5, 2013) thinks everything turned out fine. A moderator at Florida Supercon joked, "Maybe Brad Hawkins doesn't." As much as I love Hawkins, I think so too.

9. The End of Time Part 1 & 2 (Time Force)

At first these two episodes were at 19 but quickly went up, it was at 6 for a while until getting comfortable at nine. The finale of Time Force follows its counterpart of Timeranger with the opening of vortexes but similarities end there with Eric not dying, Nadira helping with the birth of a child and Ransik's battle with the Rangers. We also see Ransik's Toxie-like face. Time Force was a dark but delightful season. One gripe is that we never saw Jen and Wes kiss but that is what made the relationship powerful, leaving it to our imaginations. Also Wes makes up with his dad and joins the Silver Guardians.

8. Green with Evil Parts 1, 2, 3, 4 & 5 (MMPR)

The first sixteen episodes established the world of the Power Rangers and day in and day out routine. The first part of Green With Evil shook all that and Green Ranger rocked our whole world. Let's admit that Tommy was way better when he was evil, why else would they bring back the 'evil' Tommy back so often? Dragonzord came in the last episode but still pretty memorable. Best multi-parter ever. These episodes fluctuated from top 5 to the teens and then rested at 8.

7. Day of the Dumpster (MMPR)

The episode that started it all. We all know about the pilot with Audry Dubois but there were other scenes shot for this episode and some shots were still used from the pilot. There is a reason why “When Is A Ranger Not A Ranger?” and “Mega Mission” mirrored some dialogue from this episode because, they are well remembered by us. The episode established the rules of the majority filler episodes such as the civilian battle against grunts, the morphing sequence, fighting grunts in suits, fighting the monster of the day, the said monster growing, it being defeated by zords and the wrap-up. The episode was in the top 10, then stayed in the teens for a while and I had to pull it editorially into the top ten.

6. Once A Ranger Parts 1 & 2 (Operation Overdrive)

While Operation Overdrive was a disliked and was disappointing in writing, acting and overall tone. This episode was a delight to see many former rangers return, especially the now adult Johnny Yong Bosch as Adam. Like I said before, teamups rank pretty high for fans. Lord Zedd and Rita’s son Thrax (who we have no idea how came to being) allies the

four villain organizations and take away the Overdrive Ranger powers. Sentinel Knight puts together a team of five veteran Rangers: basically the last four Disney Seasons and one ranger from the MMPR. This two-parter started out in the middle of the countdown but you guys voted it up all the way to the top ten.

5. Forever Red (Wild Force)

Considered one of the best episodes but it is one of the most debated because the powers, in how they got them back. I don't really care. What I do care about is the Beetleborg suits used as part of the Machine Empire but it doesn't seem to bug many people. Also bothering people is the CGI Serperntera and its size, also it being destroyed by Cole on a motorcycle. So basically Cole is recruited by past Red Rangers to fight the Machine Empire on the Moon who plan to use Lord Zedd's Serperntera to take over the Earth.

4. Power of Pink (Lost Galaxy)

The second part of the In Space/Lost Galaxy teamup, it has what is considered the first death in Power Rangers but technically Mike was thought to be dead in the first two-parter of Lost Galaxy and Magna Defender dying eariler on. But unlike Mike and Kendrix, Magna Defender stayed dead. The death of the Kendrix did rock our world. Cassie was meant to take Kendrix's place hence her dancing on the Wildcat Galactabeast. But ultimately Karone took her place and an ending had to be reshot with the Space Rangers in suits.

3. To the Tenth Power (Lost Galaxy)

In the polls, this was number one. Considered the first teamup ever but "Ranger from Two Worlds" was technically the first teamup, with between the Zeo and Aquitar Rangers. But this was the first one that became a yearly tradition, to be interrupted here and there either because of money or guild problems. The Space Rangers return to help fight the Psycho Rangers who cause a lot of trouble.

2. The Mutiny Parts 1, 2, & 3 (MMPR)

I don't think it is right to not have at least ONE Mighty Morphin episode in the top five at least. Our whole world view was shook when Lord Zedd arrived and rocked it. Parents complained that Lord Zedd was too scary for kids but all he did was have a snake on him, shake around his staff and used his red vision to see the Earth. Also cool in this episode was seeing the Tyrannosaurus and Dragonzord turning against the Rangers, those easy to defeat putties, the Rangers without helmets in the Command Center, the Rangers on ATVs, Bulk and Skull's new mission to discover the Rangers' identities and of course, the Thunderzords.

1. Countdown to Destruction Part 1 & 2 (In Space)

The number one quoted multi-parter ever, I believe that fans hold these two episodes up to anything that comes after it. It also causes controversy among fans over Zordon's energy wave that annihilated all past villains but did not wipe out any future space aliens we after this episode. Not only the Space Rangers fight the forces of Dark Specter but the Alien Rangers, Phantom Ranger, Blue Senturion and Gold Ranger fight on other planets. It is like everything that happened in the past six seasons accumulated at this end. And when people criticize Jonathan Tzachor, I remind them that he directed this two-parter.

Pencil: Open Source Visio (2014-01-15 16:21)

I use Visio 2013 Pro which costs \$500, but there is Pencil where you can search for free clip art and it does Visio templates for free.

There is also Dia for Windows. I have all three.

Install LAMP on Linux Mint (2014-01-16 00:30)

Through this tutorial, you'll learn how to Install Apache, MySQL and PHP.

If you're a webpage designer or developer and use PHP, MySQL and Apache, you'll be needing these applications to be installed. When I installed Mint, I was looking for a way to install LAMP and found a tutorial on a website by somebody named "Cargoship". That tutorial was for ubuntu. But I installed it on my Linux mint, and it is working.

In this guide I will show you how to install a LAMP system. LAMP stands for Linux, Apache, MySQL, PHP. The guide is intended to help those who have very little knowledge of using Linux.

We will not cover how to install Linux the L of LAMP, because Linux Mint is already installed in your computer.

Install Apache

To start off we will install Apache.

1. Open up the Terminal (Applications > Accessories > Terminal).
2. Copy/Paste or type the following line of code into Terminal and then press enter:
`sudo apt-get install apache2`
3. The Terminal will then ask you for your password, type it and then press enter.

Testing Apache

To make sure everything installed correctly we will now test Apache to ensure it is working properly.

1. Open up any web browser and then enter the following into the web address:

`http://localhost/`

You should see a folder entitled `apache2-default/`. Open it and you will see a message saying "It works!" , congrats to you! or something like that!

Install PHP

In this part we will install PHP 5.

Step 1. Again open up the Terminal (Applications > Accessories > Terminal).

Step 2. Copy/Paste or type the following line into Terminal and press enter:

`sudo apt-get install php5 libapache2-mod-php5`

Step 3. In order for PHP to work and be compatible with Apache we must restart Apache. Type the following code in Terminal to do this:

`sudo /etc/init.d/apache2 restart`

Test PHP

To ensure there are no issues with PHP let's give it a quick test run.

Step 1. In the terminal copy/paste or type the following line:

`sudo gedit /var/www/testphp.php`

This will open up a file called `testphp.php`.

Step 2. Copy/Paste this line into the `testphp.php` file:

Step 3. Save and close the file.

Step 4. Now open your web browser and type the following into the web address:

`http://localhost/testphp.php`

(It will show you the page that has all information about your php. If you have prior experience of installing php in some other OS, you must have seen this page.)

Congrats you have now installed both Apache and PHP!

Install MySQL

To finish this guide up we will install MySQL.

Step 1. Once again open up the amazing Terminal and then copy/paste or type this line:

```
sudo apt-get install mysql-server
```

Step 2 (optional). In order for other computers on your network to view the server you have created, you must first edit the "Bind Address". Begin by opening up Terminal to edit the my.cnf file.

```
gksudo gedit /etc/mysql/my.cnf
```

Change the line

```
bind-address = 127.0.0.1
```

And change the 127.0.0.1 to your IP address.

(In Linux Mint 11, terminal itself asked to the set password, But if it doesn't follow the step 3.)

Step 3. This is where things may start to get tricky. Begin by typing the following into Terminal:

```
mysql -u root
```

Following that copy/paste or type this line:

```
mysql> SET PASSWORD FOR 'root'@'localhost' = PASSWORD('yourpassword');
```

(Make sure to change yourpassword to a password of your choice.)

Step 4. We are now going to install a program called phpMyAdmin which is an easy tool to edit your databases.

Copy/paste or type the following line into Terminal:

```
sudo apt-get install libapache2-mod-auth-mysql php5-mysql phpmyadmin
```

After that is installed our next task is to get PHP to work with MySQL. To do this we will need to open a file entitled php.ini. To open it type the following:

```
gksudo gedit /etc/php5/apache2/php.ini
```

Now we are going to have to uncomment the following line by taking out the semicolon (;).

Change this line:

```
;extension=mysql.so
```

To look like this:

```
extension=mysql.so
```

Now just restart Apache and you are all set!

```
sudo /etc/init.d/apache2 restart
```

If you get a 404 error upon visiting <http://localhost/phpmyadmin>: You will need to configure apache2.conf to work with Phpmyadmin.

```
sudo gedit /etc/apache2/apache2.conf
```

Include the following line at the bottom of the file, save and quit.

```
Include /etc/phpmyadmin/apache.conf
```

Then just restart Apache

```
sudo /etc/init.d/apache2 restart
```

Now make wonderful website and have fun!wink

And as Linux is very secure OS, it'll ask you the password again and again, on every administrative command. You'll have to type in your password many times, whenever terminal asks for it.

Nutty Chuck Hagel grounds A-10? (2014-01-16 13:19)

Secretary of Defense Chuck Hagel must be some psychopathic Republican to grounding the A-10 Thunderbolt II for mediocre F-35 Lightning II. Military just upgraded A-10 to version C two years ago. Secretary Hagel has it backwards, he should ground the F-35 Lightning II squadron and keep A-10C Thunderbolt II squadrons in service. His position as secretary of defense should be terminated ASAP.

Roms (2014-01-17 01:37)

I'm certain Obama administration is causing this unpopular PS4 and Wii U generation. If Mitt Romney was elected, PS4 and Wii U would be popular.

I saw this coming in 2002 when I collected SNES roms for SNES9x and Sega Genesis roms for Gens, but console sales are back-firing on **all the second hand games from all the previous games** sold. People owning quite a few games on Xbox 360 and PS3. I own 600 videogame rom images I also own 99 % of my purchases since MS-DOS. When I needed new acquaintances, I gave them a IGN collection xls file on CDRs. Dark ages isn't true, because the dark ages were Atari 2600 era. United States has 600 million videogames being bought, sold, or in collections.

Kids and adults alike are sharing old videogames with other people they know. Gamers are finally re-playing old games they've shelved.

Agenda 21 social problems. (2014-01-23 18:04)

The social networks are becoming unpopular. Not to mention real-life. It could well be the project 21 causing all of this.

Agenda 21: Conspiracy Theory or Threat Part 1

The battle over Agenda 21 is raging across the nation. City and County Councils have become war zones as citizens question the origins of development plans and planners deny any international connections to the UN's Agenda 21. What is the truth? Since I helped start this war, I believe it is up to me to help with the answers.

The standard points made by those who deny any Agenda 21 connection is that:

- Local planning is a local idea.
- Agenda 21 is a non-binding resolution not a treaty, carries no legal authority from which any nation is bound to act. It has no teeth.
- The UN has no enforcement capability.
- There are no "Blue-Helmeted" UN troops at City Hall.
- Planners are simply honest professionals trying to do their job, and all these protests are wasting their valuable time.
- The main concern of Agenda 21 is that man is fouling the environment and using up resources for future generations and we just need a sensible plan to preserve and protect the earth. What is so bad about that?
- There is no hidden agenda.
- "I've read Agenda 21 and I can find no threatening language that says it is a global plot. What are you so afraid of?"
- And of course, the most often heard response – "Agenda 21, what's that?"

And after they have proudly stated these well thought out points, they arrogantly throw down the gauntlet and challenge us to "answer these facts."

Well, first I have a few questions of my own that I would love to have answered.

Will one of these "innocent" promoters of the "Agenda 21 is meaningless" party line, please answer the following:

- If it all means nothing, why does the UN spend millions of dollars to hold massive international meetings in which hundreds of leaders, potentates and high priests attend, along with thousands of non-governmental organizations of every description, plus the international news media, which reports every action in breathless anticipation of its impact on the world?
- It if all means nothing, why do those same NGO representatives (which are all officially sanctioned by the UN in order to participate) spend months (sometimes years) debating, discussing, compiling, and drafting policy documents?
- If it all means nothing, why do leaders representing nearly every nation in the world attend and, with great fanfare, sign these policy documents?

Time after time we witness these massive international meetings, we read the documents that result from them, and when we question their meaning or possible impact on our nation, we are met with a dismissive shrug and a comment of "oh, probably not much..."

Really? Then why? Why the waste of money, time, and human energy? Could it be that the only purpose is to simply give diplomats, bureaucrats, and NGOs a feeling of purpose in their meaningless lives, or perhaps a chance to branch out of their lonely apartments? Or could it really be that these meetings and the documents they produce are exactly as we say they are – a blueprint for policy, rules, regulations, perhaps even global governance that will affect the lives, fortunes, property and futures of every person on earth? Which is it? You can't have it both ways.

OPPD presents the 2013 Speakers Series

Sustainable Energy & Environmental Stewardship

Wednesday, Oct. 16
5:30 to 7 p.m., South Omaha Library
2808 Q St., Omaha

FREE home weatherization kit to first 50 attendees!

Learn more about OPPD's efforts pertaining to renewable energy, electric vehicles, demand-side management and energy-efficiency programs.

For hearing-impaired customers an interpreter will be at this presentation.

oppd.com

The Speakers Series is a collaborative effort by OPPD and the Omaha Public Library.

[Click here to learn more](#)

Prior to taking our furlough on Saturday we shared with you Agenda 21: Conspiracy Theory or Threat Part 1 (Agenda 21 (Part 1) and promised ensuing parts. Today, we have Part 2, with more installments anticipated. Parenthetically, we might note that earlier in the day we received a notice courtesy of the local daily of an event sponsored by your Omaha Public Power District on October 16 on sustainable energy.

With that said, here is installment 2 from joeformerica.com courtesy of our friends at Cowboybyte.com.

Agenda 21: Conspiracy Theory or Threat Part 2

"Those who simply read or quickly scan Agenda 21 are puzzled by our opposition to what they see as a harmless, non-controversial document which they read as voluntary suggestions for preserving natural resources and protecting the environment. Why the fear? What exactly bothers us so much?

The problem is, we who oppose Agenda 21 have read and studied much more than this one document and we've connected the dots. Many of us have attended those international meetings, rubbed elbows with the authors and leaders of the advocated policies, and overheard their insider (not for public distribution) comments about their real purpose.

Here are a few examples of those comments made by major leaders of this movement as to the true purpose of the policies coming out of these UN meetings:

"No matter if the science of global warming is all phony...climate change provides the greatest opportunity to bring about justice and equality in the world." Christine Stewart (former Canadian Minister of the Environment)

"The concept of national sovereignty has been immutable, indeed a sacred principle of international relations. It is a principle which will yield only slowly and reluctantly to the new imperatives of global environmental cooperation." Report from the UN Commission on Global Governance.

"Regionalism must precede globalism. We foresee a seamless system of governance from local communities, individual states, regional unions and up through to the United Nations itself." Report from the UN Commission on Global Governance.

All three of these quotes (and we have many) indicate using lies and rhetoric to achieve their goals, and that those goals include the elimination of national sovereignty and the creation of a "seamless system" for global governance. Again, do these quotes have meaning and purpose – do they reveal the true thoughts of the promoters of these policies, or were they just joking?

For the past three decades through the United Nations infrastructure, there have been a series of meetings, each producing another document or lynchpin to lay the groundwork for a centralized global economy, judicial system, military, and communications system, leading to what can only be described as a global government. From our study of these events, we have come to the conclusion that Agenda 21 represents the culmination of all of those efforts, indeed representing the step by step blueprint for the full imposition of those goals. Here's just a sample of these meetings and the documents they produced:

- In 1980, West German Chancellor Willy Brandt chaired the Commission on International Development. The document, or report coming out of this effort, entitled "North-South: A program for Survival," stated "World development is not merely an economic process, [it] involves a **profound transformation** of the entire economic and social structure...not only the idea of economic betterment, but also of greater human dignity, security, justice and equality...The Commission realizes that mankind has to develop a concept of a '**single community**' to develop global order."
-
- That same year Sean MacBride, a recipient of the Lenin Peace Prize, headed up a commission on international communications which issued a report entitled "Many Voices, One World: Towards a New, More Just and More Efficient World Information and Communication Order." The Commission, which included the head of the Soviet news Agency, TASS, believed that a "New World Information Order" was prerequisite to a new world economic order. The report was a **blueprint for controlling the media**, even to the point of suggesting that international journalists be licensed.

-
- In 1982, Olof Palme, the man who single-handedly returned Socialism to Sweden, served as chairman of the Independent Commission on Disarmament and Security Issues. His report, entitled "Common Security: A Blueprint for Survival," said: *"All States have the duty to promote the achievement of general and complete disarmament under effective international control..."* The report went on to call for money that is saved from disarmament to be used to pay for social programs. The Commission also proposed a strategic shift from "collective security" such as the alliances like NATO, to one of **"common security" through the United Nations.**
-
-
- Finally, in 1987, came the granddaddy commission of them all, The Brundtland Commission on Environment and Development. Headed by Gro Harlem Brundtland, Vice President of the World Socialist Party, the commission introduced the concept of "Sustainable Development." **For the first time the environment was tied to the tried and true Socialist goals of international redistribution of wealth.** Said the report, *"Poverty is a major cause and effect of global environmental problems. It is therefore futile to attempt to deal with environmental problems without a broader perspective that encompasses the factors underlying world poverty and international inequality."*

These four commissions laid the groundwork for an agenda of global control; A controlled media would dictate the flow of information and ideas and prevent dissent; control of international development manages and redistributes wealth; full disarmament would put the power structure into the hands of those with armaments; and tying environmentalism to poverty and economic development would bring the entire agenda to the level of an international emergency.

One world, one media, one authority for development, one source of wealth, one international army. The construction of a "just society" with political and social equality rather than a free society with the individual as the sole possessor of rights. The next step was to pull it altogether into a simple blueprint for implementation.

During the 1990s, the UN sponsored a series of summits and conferences dealing with such issues as human rights, the rights of the child, forced abortion and sterilization as solutions for population control, and plans for global taxation through the UN.

Throughout each of these summits, hundreds of Non-governmental organizations (NGOs) worked behind the scenes to write policy documents pertaining to each of these issues, detailing goals and a process to achieve them. These NGO's are specifically sanctioned by the United Nations in order to participate in the process. The UN views them as "civil society, the non governmental representatives of the people. In short, in the eyes of the UN, the NGOs are the "people."

Who are they? They include activist groups with private political agendas including the Environmental Defense Fund, National Audubon Society, The Nature Conservancy, National Wildlife Federation, Zero Population Growth, Planned Parenthood, the Sierra Club, the National Education Association, and hundreds more. These groups all have specific political agendas which they desire to become law of the land. Through work in these international summits and conferences, their political wish lists become official government policy.

In fact, through the UN infrastructure the NGOs sit in equality to government officials from member nations including the United States. One of the most powerful UN operations is the United Nations Environmental Program (UNEP). Created in 1973 by the UN General Assembly, the UNEP is the catalyst through which the global environmental agenda is implemented. Virtually all international environmental programs and policy changes that have occurred globally in the past three decades are a result of UNEP efforts. Sitting in on UNEP meetings, helping to write and implement policy, along with these powerful NGOs are government representatives, including U.S. federal agencies such as the Department of State, Department of Interior, Department of Agriculture, Environmental Protection Agency, the National Park Service, the U.S. Forest Service, and the Fish and Wildlife Service.

This, then, is a glimpse of the power structure behind the force that gathered in Rio de Janeiro in 1992 for the UN-sponsored Earth Summit. Here, five major documents, written primarily by NGOs with the guidance and assistance of government agencies, were introduced to the world. In fact, these final documents had been first drafted and honed through the long, arduous series of international conferences previously mentioned. Now, at Rio, they were ready for adoption as a blueprint for what could only be described as the transformation of human society.

The five documents were: the "Convention on Climate Change," the precursor to the coming Kyoto Climate Change Protocol, later adopted in 1997; the "Biodiversity Treaty," which would declare that massive amounts of land should be off limits to human development; the third document was called the "Rio Declaration," which called for the eradication of poverty throughout the world through the redistribution of wealth; the fourth document was the "Convention on Forest Principles," calling for international management of the world's forests, essentially shutting down or severely regulating the timber industry; and the fifth document was Agenda 21, which contained the full agenda for implementing worldwide Sustainable Development. The 300 page document contains 40 chapters that address virtually every facet of human life and contains great detail as to how the concept of Sustainable Development should be implemented through every level of government.

What did the United Nations believe that process entailed? In 1993, to help explain the far-reaching aspects of the plan, the UN published "Agenda 21: The Earth Summit Strategy to Save Our Planet." Here's how the UN described Agenda 21 in that document: *"Agenda 21 proposes an array of actions which are intended to be implemented by every person on earth...it calls for specific changes in the activities of all people...Effective execution of Agenda 21 will require a profound reorientation of all humans, unlike anything the world has ever experienced."* I have never read a stronger, more powerful description of the use of government power.

-

However, critics of our efforts against Agenda 21 rush to point out that Agenda 21 is a "soft law" policy - not a treaty that must be ratified by the U.S. Senate to become law. So it is just a suggestion, nothing to be afraid of. To make such an argument means that these critics have failed to follow the bouncing ball of implementation."

"It started when, at the Earth Summit, President George H.W. Bush, along with 179 other heads of state signed agreement to Agenda 21. One year later, newly elected President Bill Clinton signed Executive Order # 12852 to create the President's Council on Sustainable Development (PCSD). The Council consisted of 12 cabinet secretaries, top executives from business, and executives from six major environmental organizations, including the Nature Conservancy, The Sierra Club, the World Resources Institute, and the National Wildlife Federation. These were all players in the creation of Agenda 21 at the international level - now openly serving on the PCSD with the specific mission to implement Agenda 21 into American policy.

It is interesting to note that in the pages of the PCSD report entitled "Sustainable America: A new Consensus for the Future, it directly quotes the Brundtland Commission's report "Our Common Future" for a definition of Sustainable Development. That is about as direct a tie to the UN as one can get. The PCSD brought the concept of Sustainable Development into the policy process of every agencies of the US federal government.

A major tool for implementation was the enormous grant-making power of the federal government. Grant programs were created through literally every agency to entice states and local communities to accept Sustainable Development policy in local programs. In fact, the green groups serving on the PCSD, which also wrote Agenda 21 in the first place, knew full well what programs needed to be implemented to enforce Sustainable Development policy, and they helped create the grant programs, complete with specific actions that must be taken by communities to assure the money is properly spent to implement Sustainable Development policy. Those are the "strings" to which we opponents refer. Such tactics make the grants effective weapons to insure the policy is moving forward.

From that point, these same NGOs sent their members into the state legislatures to lobby for and encourage policy and additional state grant programs. They have lobbied for states to produce legislation requiring local communities to implement comprehensive development plans. Once that legislation was in place, the same NGOs (authors of Agenda 21) quickly moved into the local communities to "help" local governments comply with the state mandates.

And they pledged to help by showing communities how to acquire the grant money to pay for it – with the above mentioned strings attached.

We're told over and over again that such policies are local, state and national, with no conspiracy of ties to the UN. Really? Then how are we to explain this message, taken from the Federal Register, August 24, 1998, (Volume 63, Number 163) from a discussion on the EPA Sustainable Development Challenge Grant Program? It says, "*The Sustainable Development Challenge Grant Program is also a step in Implementing 'Agenda 21, the Global Plan of Action on Sustainable Development,' signed by the United States at the Earth Summit in Rio de Janeiro in 1992. All of these programs require broad community participation to identify and address environmental issues.*"

Or consider this quote from a report by Phil Janik, Chief Operating Officer of the USDA – Forest Service, entitled "The USDA-Forest Service Commitment and Approach to Forest Sustainability" "*In Our Common Future published in 1987, the Brundtland Commission explains that 'the environment is where we all live; and development is what we all do in attempting to improve our lot within that abode.'*" In short, Janik was explaining to his audience (the Society of American Foresters) just where the Forest Service was getting its definition of Sustainable Development – the report from the UN Commission on Global Governance.

Meanwhile, the NGOs began to "partner" with other governmental organizations like the U.S. Conference of Mayors, the National Governors Association, the National League of Cities, the National Association of County Administrators and more organizations to which elected representatives belong to, assuring a near that a near universal message of Sustainable Development comes from every level of government.

Another NGO group which helped write Agenda 21 for the UN Earth Summit was a group originally called the International Council for Local Environmental Initiatives (ICLEI). It now calls itself ICLEI – Local Governments for Sustainability. After the Earth Summit in 1992, ICLEI set its mission to move into the policy process of local governments around the world to impose Sustainable Development policy. It now operates in more than 1200 cities globally, including 600 American cities, all of which pay dues for the privilege of working with ICLEI. Like a cancer, ICLEI begins to infest the local government policy, training city employees to think only in terms of Sustainable Development, and replacing local guidelines with international codes, rules and regulations.

So it's true, there are no UN blue helmeted troops occupying city halls in America, and yes, the UN itself does not have enforcement capability for this "non-binding" document called Agenda 21. However, it does have its own storm troopers in the person of the Non-governmental Organizations which the UN officially sanctions to carry on its work. And that is how Agenda 21, a UN policy, has become a direct threat to local American communities."

openSUSE 13.1 review (2014-01-31 02:13)

OMG! I have skipped openSUSE 12.3! But now I have openSUSE 13.1 so I haven't completely alienated openSUSE for Scientific Linux or Linux Mint. I might turn it into a Youtube video. openSUSE 13.2 is out in November 2014!

openSUSE 13.1 has been released so it's time for a review. I've always liked openSUSE, I started out with SUSE Linux years ago and it's always had a special place in my heart. I'm glad it's still around and doing so well these days. Whenever I install it, I'm reminded of where I got my start with Linux and I'm grateful that it was available back then. This review covers the KDE version of openSUSE 13.1. However, you can also use GNOME as the default desktop environment. Both desktops are great, and work well in openSUSE. Ultimately it gets down to your personal preference, but I don't think you can go wrong with either option.

If you aren't familiar with what KDE has to offer, you can read an overview of KDE in openSUSE 13.1 that covers the advantages of the Plasma Desktop. Suffice to say that the combination of KDE 4.11 and openSUSE provides a powerful desktop operating system that is also elegant and pleasing in daily use.

openSUSE 13.1 Boot Menu

What's New in openSUSE 13.1 KDE

Here's a sample of the new features in this release:

KDE

KDE Plasma Desktop is the default in openSUSE, and the 4.11 version of this Free Desktop is a long term maintained release. This release brings speed improvements in Desktop Search, file and window management, improved multi-monitor handling, brand new delayed mail sending feature and scam detection for KDE PIM and much more. Also new is deeper Android integration in the desktop and in the Amarok music player. See this great introduction to Plasma Desktop on openSUSE 13.1.

Stabilized

Much effort was put in testing openSUSE 13.1, with improvements to our automated openQA testing tool, a global bug fixing hackathon and more. The btrfs file system has received a serious workout and while not default, is considered stable for everyday usage. This release has been selected for Evergreen maintenance extending its life cycle to 3 years.

Networked

This release introduces the latest OpenStack Havana with almost 400 new features. Web server admins will appreciate the latest Apache, MySQL and MariaDB updates. Web developers benefit from an updated Ruby 2.0 on Rails 4 with improvements from core classes to better caching in the Rails framework and the latest php 5.4.2 comes with a build-in testing server. End users can now mount Amazon s3 buckets as local file system and use much improved Samba 4.1 with better windows domains support.

Evolved

openSUSE moves forward with AArch64, making openSUSE ready for development on the upcoming generation of 64bit ARM devices. 32bit ARM support has been heavily improved and a special Raspberry Pi

build for openSUSE is available. This release also delivers GCC 4.8 with new error reporting abilities, the latest glibc supporting AArch64, C11 and Intel TSX Lock Elision, the new SDL2 and Qt 5.1, bringing QML and C++11 features to developers..

Polished

openSUSE 13.1 comes with much improved font hinting thanks to the new font engine in Freetype 2.5. YaST has been ported to Ruby, opening contribution up to a large number of skilled developers. In this release, ActiveDoc replaces doc.opensuse.org and the majority of packaged documents in openSUSE, lowering the barrier to contribution.

Faster

New is accelerated video with VDPAU support in MESA and an optimized version of glibc for 32bit systems. Linux 3.11 includes work on 'page reclaim', maintaining performance during disk operations.

Feature-full

Desktop users will appreciate the Android devices integration in the KDE file manager, in the shell and in music player Amarok. Artists have to try out the new Krita improvements with textured painting, greyscale masks & selections and more. GNOME Shell introduces a redesign of the system status bar and Header Bars in many applications, making better use of screen space. Enlightenment now also has an openSUSE theme.

Innovative

This release comes with a number of experimental technologies to try out. This includes preliminary Wayland support with Weston compositor in GNOME Shell and KDE Plasma Desktop as well as improved support for Ultra high-resolution in applications and shells. New is also the LightDM KDE greeter and a plasma NetworkManagement applet for testing.

System Requirements for openSUSE 13.1 KDE

Here's what you'll need to run openSUSE 13.1:

- *Pentium* III 500 MHz or higher processor (Pentium 4 2.4 GHz or higher or any AMD64 or Intel64 processor recommended)*
- *Main memory: 1 GB physical RAM (2 GB recommended)*
- *Hard disk: 3 GB available disk space for a minimal install, 5 GB available for a graphical desktop (more recommended)*
- *Sound and graphics cards: supports most modern sound and graphics cards, 800 x 600 display resolution (1024 x 768 or higher recommended)*
- *Booting from CD/DVD drive or USB-Stick for installation, or support for booting over network (you need to setup PXE by yourself, look also at Network install) or an existing installation of openSUSE, more information at Installation without CD*

openSUSE 13.1 KDE Download

You can download openSUSE 13.1 KDE from the openSUSE download page. The file I downloaded weighed in at 4.57 GB. I also used the 64-bit version for this review, but you can download the 32-bit version if you prefer it.

While I opted for the DVD version that requires an install, you can also download the live versions of openSUSE 13.1 instead. That will let you run openSUSE 13.1 off the disc instead of having to do an install. I recommend doing this if you've never used openSUSE before, it will give you a taste of what it offers without having to do an actual install.

You can choose KDE or GNOME if you go for the live versions, see the links for each desktop environment on the downloads page for openSUSE 13.1.

If you're a distrohopper then you might want to try it in a virtual machine via VirtualBox before running it on real

hardware.

openSUSE 13.1 KDE Installation

Installing openSUSE 13.1 is not difficult though the installer is not quite as slick as the one in Ubuntu. My install took longer than an Ubuntu install but there was also more software included with it.

You can watch a slideshow once the install starts. I recommend checking out the slideshow if you are totally new to openSUSE, it's a good way to start learning how to use it.

openSUSE 13.1 Install Slideshow

The openSUSE 13.1 KDE Desktop

The openSUSE 13.1 KDE desktop is quite attractive. The first things you notice are the darker color and the openSUSE mascot in green. The desktop contains icons for Firefox, the KInfoCenter, LibreOffice, Online Help and openSUSE. Click the chameleon button on the panel to access application categories, system tools, utilities, desktop configuration, favorites, and to shut down your system. openSUSE 13.1 defaults to the sliding menus in KDE, but I prefer the classic menus instead. To switch to the classic menus, just right click the chameleon button on the panel and choose classic style.

Linux Software Management Tools in openSUSE 13.1 KDE

There are two ways to manage software in openSUSE 13.1, YaST2 and Apper. Unless you really need it, I recommend using Apper. The interface is a bit more intuitive and applications are broken down into category for easy browsing. To install an application in Apper, just find it and click the Install button and then click Apply. To remove an application, just click the Remove button then click on Apply.

openSUSE 13.1 Apper Software Management

openSUSE 13.1 YaST 2 Software Management

Problems & Headaches Found in openSUSE 13.1 KDE

openSUSE 13.1 ran extremely well for me, I saw no stability or speed problems with it. It seems that the developer claims about improving stability and speed have been borne out by its performance. However, if you've seen any problems then please post them in the comments below for the benefit of other readers. Thanks in advance.

In terms of criticism, I think there are two weak points in openSUSE 13.1.

The first is the installer. It's not hard to use but it isn't as streamlined as it could be. The installer in Ubuntu and Linux Mint seems more intuitive and simpler to me. openSUSE 13.1's installer could use a rework that makes it more appealing and easier for folks that are new to this distro.

The second weak point is in software management. Apper is okay, but it lags behind the Ubuntu Software Center and Linux Mint's Software Manager. Using YaST 2 for software management is fine for very experienced users, but it's not something well suited to casual desktop users.

So I'd like to see some improvements on these two points. Some sort of app store type software management tool would be very welcome in openSUSE, along with a revamped installer that simplifies the process for folks new to Linux and openSUSE.

Neither of these things is a deal breaker by any means. openSUSE is a great desktop distribution, but there's always room for improvement and I think addressing these two issues would make openSUSE even better than it is right now.

Where To Get Help for openSUSE 13.1 KDE

If you're having problems, please post your questions in the comments below or register for the DLR forum. Other readers might be able to assist you. You might also want to check out the openSUSE forums or mailing list.

If you're new to Linux, you might want to check out some of the books available about it at Amazon. You can learn quite a bit that you will probably find useful later on. You can also on laptops and tablets, desktops and monitors, components, and computer accessories.

Final Thoughts About openSUSE 13.1 KDE

openSUSE 13.1 takes an already fine desktop distribution and makes it even better. Ubuntu, Linux Mint and others have gotten more attention in recent years than openSUSE, but this release may very well change that. openSUSE 13.1 deserves to be included in any discussion of the top tier of desktop distributions.

I found myself really enjoying openSUSE 13.1, it's well worth a download if you are in the market for a new desktop distro. If KDE and GNOME don't appeal to you then you can build your own version of openSUSE or try one of the various derivatives of it.

If you are using Windows or OS X right now, openSUSE 13.1 is definitely a viable alternative. If you aren't sure about using it, download one of the live versions of it and then run it off the disc first to see how you like it. My guess is that you will probably enjoy it once you get your feet wet with it.

openSUSE 13.1 is suitable for beginner, intermediate and advanced Linux users.

What's your take on openSUSE 13.1 KDE? Tell me in the comments below.

Summary Table:

Product: openSUSE 13.1 KDE

Web Site: <http://www.opensuse.org>

Price: Free

Pros: Stability and speed improvements. Excellent KDE 4.11 integration. Android device integration in KDE. Updated versions of many different software applications.

Cons: Installer works well but is still not as elegant or streamlined as the one in Ubuntu and Linux Mint. Apper and YaST 2 are not as good in terms of intuitive software management as the Ubuntu Software Center or Linux Mint's Software Manager.

Play old WinXP games on any Windows (2014-01-31 21:03)

I am somewhat older now, I look back at my childhood was full of MS-DOS and Windows 95 PC games. My first computer was a IBM 386 that ran MS-DOS. My second computer ran Windows 95.

Download VMware Player for Windows 8.1 and enjoy DirectX 7 - 9 PC games from ten to twenty years ago such as Diablo 2 Lord of Destruction. The games obviously don't run correctly on newer Windows 8.1. It's a free download.

Old MS-DOS games now found off the "abandonware websites" or torrents for free run in the D-Fend Reloaded emulator. I have Secret of Monkey Island, LeChuck's Revenge - Monkey Island, Kings Quest IV, Quake, Quake II, Doom II, Simcity 2000,

Command & Conqueror: Red Alert, Day of the Tentacle, Ultima VI: The False Prophet, X-Com: UFO Defense , Doom, Blood, Sid Meier's Civilization to name a few.

Great way to play cheap. MS-DOS and Windows XP games are very cheap on Amazon now. Old Windows games are cool, because they do not need No-DVD cracks.

16.2 February

Installed PC-BSD 10.0 (2014-02-01 16:01)

I have stable Radeon R9 270x drivers for the PC-BSD 10.0. Some RC releases had Radeon drivers, but some RC releases didn't. PC-BSD 10.0 had RC1 – RC7 before RTM release.

New features for PC-BSD 10:

- PC-BSD is now 25-30 % faster.
- **PC-BSD 10 dual boots with GRUB 2.0** so it can boot with latest Linux or Windows 8.1.
- ZFS version has been updated.
- MATE 1.6.1,
- Cinnamon Desktop Environment,
- KDE 4.10.5,
- XFCE 4.10
- LXDE.
- Works in Virtual Box and VMware Player fine. Installed in 20 minutes!

Blame Ron Kind (2014-02-20 13:10)

Why is it illegal ???

The county is growing and marginalizing this guy. Since it is growing with Black minorities, that's why. This is entirely Ron Kind's fault. Blame Ron Kind.

21 signs you grew up in the '90s (2014-02-20 14:33)

Here's my somewhat nostalgic list of all the things people who grew up in the '90s know how to do that is now obsolete.

1. How to save a file on a floppy disc
2. The Dewey Decimal System
3. Dial-Up Internet
4. When AOL used to be the sh*t
5. How to record something on a VHS tape
6. When all you could do on a cellular phone was talk
7. The point of a pager/beeper
8. Walkmans
9. How to place a collect call
10. How to find your way using only a map and no GPS
11. Where in the world is Carmen Sandiego?
12. How to get a Furby or Tamagotchi to shut up
13. How to write in cursive
14. How to do the macarena
15. Just how awesome the original "Double Dare" and "Legends of Hidden Temple" TV shows were (and how awesome '90s Nickelodeon shows were in general).
16. How awesome and frightening AOL chat rooms were
17. The secrets to collecting the best Beanie Babies and POGs
18. How to entertain yourself without YouTube videos (oh wait, the Internet in general)
19. The thrill of using Napster
20. How to send a fax
21. How to survive high school without Facebook

TR-3 Aurora (2014-02-20 18:47)

Image via Hendrickson

(Image licensed under Creative Commons Attribution-ShareAlike 3.0)

There is nothing more fascinating in the aviation world than the “black projects” – aircraft programs that are so secret that even those with the highest security clearance may have no idea they exist. But occasionally the veil of secrecy is accidentally lifted – or projects are declassified – offering a fleeting glimpse into this shadowy world. Here we take to the air with six different planes – some now released into the public domain, others still highly classified or even non-existent.

TR-3A Black Manta

Images by Adrian Mann

Allegedly active during the 1980s and '90s, little is known of the TR-3A Black Manta beyond rumour and hearsay. Popularly embraced as a subsonic stealth aircraft manufactured by Northrop Grumman (famed for its “flying wing” designs), the TR-3A was rumoured to have been used in the Gulf War in conjunction with F-117A stealth fighters, but little evidence exists to support this. Another theory – again unsubstantiated – holds that the vehicle identified as the TR-3 was a prototype for the B-2 Spirit.

(Image: Area51ZONE.com)

Two 1977 designs from Teledyne Ryan, a firm specialising in unmanned aerial vehicles, have been linked to the TR-3A. This stems in part from the fact that “TR” stands for Teledyne Ryan – a fanciful connection considering “TR” is well

known to denote "tactical reconnaissance. Teledyne Ryan was purchased by Northrop Grumman in 1999, adding fuel to the fire of conspiracy theory. But aside from a patent (below) that is said to resemble the configuration of whatever aircraft has been identified with the TR-3A, there is little, if any, credible evidence linking it to Teledyne Ryan.

(Image: United States Patent 4019699)_

The designation "TR-3" likely came about due to confusion with another black project, Tier III, which led to the RQ-3 Darkstar. Another theory holds that the aircraft dubbed the TR-3 may have grown out of the Tactical High Altitude Penetrator (THAP) studies, of which little exists in the public domain. This article discusses THAP's potential mission as a recon-strike platform, which could account for a plethora of sightings throughout the 1980s and '90s. However, there is significant debate over whether THAP progressed to the flight testing stage. If THAP was not responsible for the "TR-3A" sightings, it's possible another secret demonstrator associated with the A-12 Avenger programme (below) could have been...

Flying Triangle dubbed "TR-3B"

The online world is buzzing with information about the alleged "TR-3B", from rumours of its fantastical capabilities to intriguing video footage. Yet despite numerous sightings suggesting the existence of a large triangular aircraft that can fly slowly and quietly, little information exists about this rumoured black project. Like the TR-3A above, the designation "TR-3B" is almost certainly a misnomer.

The most dramatic claims frame the "TR-3B" as a nuclear powered tactical reconnaissance aircraft capable of disrupting gravity. But a more likely – and in many ways more interesting – argument for these strange flying triangles, is that they're lighter-than-air vehicles or some sort of stealthy troop transport aircraft. Given the technologies proven by Have Blue and Tacit Blue in the 1970s and '80s and the number of projects that have allegedly been tested at Groom Lake since that time, it's not impossible to think that some of these flying triangle reports may have some substance to them, if not under the designation TR-3B.

A-12 Avenger II (and the Mysterious Jet that May Have Preceded it)

Image via U.S. Navy

The A-12 Avenger II was envisioned by McDonnell Douglas and General Dynamics as an all-weather, carrier-based stealth bomber for the U.S. Navy and Marines. Shrouded in secrecy at the time of development in 1983, the A-12 reportedly gained the nickname “Flying Dorito”. Concept drawings and mock-ups show a flying wing design in the shape of an isosceles triangle, with the cockpit near the apex.

Image by Anynobody

(Image licensed under Creative Commons Attribution-ShareAlike 3.0)

Development of the A-12 was hampered by problems. The project was cancelled in January 1991 by then-Secretary of Defense Dick Cheney when the estimated price of each plane allegedly hit \$165 million. The cancellation was said to be a breach of contract, resulting in years of legal wrangling. In 2009, a court finally ruled in favour of the government and ordered the contractors to pay more than a \$2 billion in charges, but the battle ranges on to this day.

Images via U.S. Navy

After the cancellation of the A-12 Avenger II the Navy purchased the F/A-18E/F Super Hornet. While there was never a full scale prototype, an earlier (1976 – 1984) classified General Dynamics technology demonstrator called Model 100 (funded under the Have Key program) may have paved the way for the cancelled A-12. It has been suggested that this aircraft remains secret due to the ongoing legal issues. The A-12 has also been linked to a secret plane called Sneaky Pete, which may or may not be the Model 100, or a development thereof. We were able to locate one A-12 mock-up thanks to those savvy online explorers at Virtual Globetrotting.

X-44 Manta

Image via strange-mecha.com

(Image licensed under Creative Commons Attribution-ShareAlike 3.0 Unported)

The X-44 Manta was a conceptual design by Lockheed Martin, based on the original F-22 Raptor (below). The X-44 was essentially a tailless Raptor with large delta wing and advanced thrust vectoring nozzles replacing normal aerodynamic control surfaces. Benefits would be a more stealthy, light airframe, with increased fuel volume and maneuverability. The plan was to convert an early F-22 prototype but the program was allegedly terminated in 2000. The X-44 render looks similar to the proposed FB-22, reportedly cancelled in 2006.

Image via Rob Shenk

(Image licensed under Creative Commons Attribution-Share Alike 2.0 Generic)

It's hard to know what to make of many alleged black projects. Could some of these exotic aircraft be one and the same? How much disinformation is out there? The X-44 was essentially a flying wing design with a name similar to the TR-3A "Black Manta", although in the X-44's case, MANTA apparently denoted Multi-Axis No-Tail Aircraft. Could this be a case of one black project's name being mistakenly attributed to another, like TR-3 and Tier III? In 2005, GlobalSecurity.org reported that the X-44 designation may be reserved for a possible NASA full-scale manned tailless flight control demonstrator.

HALO (High Altitude Low Observability) / BAE Replica

(Image: Stridus, public domain)

Like other black projects, Britain's effort to create a stealth demonstrator remains shadowy, despite cancellation in the 1990s. The Replica program was a BAE Systems design study tied in with the RAF's now defunct Future Offensive Air System (FOAS). It is known to have run from 1994 to 1999, with a full-sized mock-up subjected to rigorous testing to determine its radar cross section (above).

Image via Planeman

(Image courtesy of AboveTopSecret.com (CC-Attribution-NonCommercial-NoDerivs 2.5))

FOAS set out to replace the RAF's Tornado GR4 jets with a range of manned and unmanned platforms by 2017. The program was cancelled in June 2005 after the UK joined the U.S. Joint-Unmanned Combat Air System (J-UCAS) program, which was itself cancelled the next year but later revived as the Navy-only UCAS-D program. After the termination of FOAS, knowledge gained from Replica was poured into the Joint Strike Fighter (JSF).

Images via United States Air Force

Initial arguments over Britain's access to the JSF source code prompted Britain to consider a potential alternative. While likely referring to an adapted Eurofighter Typhoon, Replica remains in the shadows, despite public acknowledgment of the program and photos of the full scale mock-up stored at BAE Warton. This could be due to the ongoing use of Replica's technology in forthcoming projects, such as the JSF, but also Taranis, a BAE unmanned demonstrator. Again publicly acknowledged, Taranis is set to fly next year although sightings suggest it – or perhaps something else – flew in 2009, which the British government vehemently denies.

Aurora - Hypersonic Spyplane

Image via Hendrickson and Foxbat

(Image licensed under Creative Commons Attribution-ShareAlike 3.0)

The Aurora spyplane is the world's most famous top secret aircraft, and a reliable photograph would be one of the most coveted finds in the history of classified aviation. Historically presented as a hypersonic replacement for the ageing SR-71 Blackbird spyplane (below), there's considerable evidence available in the public domain to suggest no specific aircraft called "Aurora" ever existed.

SR-71 Blackbird (image via U.S. Air Force)

The name "Aurora" reportedly slipped out in the 1985 US budget alongside an allocation of \$455 million for "black aircraft production". Excited journalists, writing in the March 1990 edition of *Aviation Week & Space Technology*, linked "Aurora" to the reported black aircraft, and later to a family of exotic aviation projects, claiming that by 1987 funding had reached \$2.3 billion. Ben Rich, former director of the Lockheed Skunk Works (which built the F-117, below), said there never was a hypersonic Blackbird follow-on and claimed Aurora was the name given to the B-2 Stealth Bomber competition funding.

F-117 Nighthawk (image by U.S. Air Force)

Helping to fuel the Aurora legend was a disjointed catalogue of sightings and mysterious sonic booms. The most compelling sighting came in August 1989, when Chris Gibson, an engineer aboard the Galveston Key rig in the North Sea, observed a strange isosceles triangle-shaped aircraft refuelling from a KC-135 Stratotanker, escorted by two F-111 bombers. Gibson, a member of the Royal Observer Corps and trained aircraft recognition expert, could not identify the mysterious plane.

Image via Google Earth

In the early 1990s, the disclosed “Aurora” designation and the “North Sea sighting” were linked to several other reports that helped perpetuate the story of a top secret SR-71 follow-on. One was a report of an aircraft over Amarillo, Texas, with an engine described as emitting a “strange, loud pulsating roar”. Caught on film was an alleged “donuts-on-a-rope” contrail that has become synonymous with the Aurora myth. While some attribute this to a potential pulse wave detonation engine, others have argued the contrails could have been made by ordinary jet aircraft.

Images via Google Earth

Finally, a series of bizarre sonic booms heard over California up until 1993 were attributed to Aurora after seismologists concluded they did not characterise earthquakes, but indicated “something at 90,000 feet, Mach 4 to Mach 5.2”. Intriguingly, each unexplained sonic boom came on a Thursday morning between 6 and 7am. In addition, Groom Lake (Area 51) has a six mile long runway, now closed, that some say would be a requirement for testing a high speed, mach 5 plus, aircraft.

It’s telling that, more than 20 years after Aurora debuted in aviation and popular science publications, no solid evidence has been found to support its existence, despite the hype and hordes of investigators digging for information. At this point it seems likely that the top secret aircraft known as Aurora stems from sightings of various aircraft (some potentially black projects) and not necessarily a single airframe. That said, Chris Gibson’s sighting and the strange skyquakes remain a mystery to this day.

UFO: Flying Triangles

Posted: 29/09/2012

There are thousands of UFO sightings around the world every year, but a high percentage of them relate to one very common UFO and shape....

Strange flying black triangle UFOs

I myself witnessed one on 30 March 1993, which was part of the famous UK Cosford UFO incident, and I became one of thousands of people who have witnessed these strange craft in our skies.

Read more about the Cosford UFO incident here: [Cosford UFO](#)

But what are they?

They are large, triangular-shaped UFOs, often black in colour, with rounded corners and making a low, humming noise. They disappear to the horizon at unbelievable speed. They are usually big craft and show up from nowhere in the blink of an eye.

The first sighting of these mystery triangles was recorded and reported in 1965. Some say they were first sighted in 1950s. For some time people have said they are secret military projects - the next generation stealth aircrafts. But why are they flying the same way since sixties. How come the technology never changed in more than 50 years?

According to many ufologists like myself, these UFOs are the outcome of direct transfer of technologies from extraterrestrials to human civilization in different parts of the world. They are believed to be reverse engineered from crashed UFOs, and have been developed behind closed doors at top secret military facilities and bases around the world. One such facility is Groom Lake aka Area 51 in Nevada USA: [AREA 51](#)

The triangle shaped UFOs are said to use anti-gravity propulsion. They also use superconductors to create the electromagnetic flux as well as anti-gravity propulsion. That is why the humming noise comes out which was heard by

myself and many others. What I witnessed on 30th March 1993 was very real indeed and is still unexplained along with other flying triangle incidents. But we have to consider the possibility that it may not just be Extra-Terrestrial UFOs, but craft developed by us from their technology...

Some laugh at this theory and just assume people who see these triangles are seeing illusions. But when have you heard and investigated people seeing exactly the same thing or 'illusion' (from a sceptic's point of view) in places tens of thousands of miles apart, it cannot be an illusion or something just made up in the mind.

LOCKHEED SR-91 AURORA

Pennsylvania Lights

GAP – Last night, July 29th, 2012. I was traveling eastbound on US Route 30. I was driving when I saw 6-7 large "fireballs" traveling towards me. I knew pretty quickly these were not airplanes, due to how they were grouped together and I have been in this area for 12 years and I am accustomed to the airplanes that travel in this area. They were a bright burning red color that was constant that did not dim or flash.

I pulled over on the side of the road and began filming with my iPhone 4GS. The first four were traveling in two pairs and the others were traveling in singles behind. The objects started to align in a triangle, then a straight line before disappearing. Thanks to MUFON CMS

Texas Triangle

SHAMROCK – I put Travis County and Austin in the location fields of the form at the request of the field investigator (Robert Powell). A friend who attended college picked me up on November 20, 2000. It was at dusk near I-40 when

I noticed the object moving northeast. As we got within two miles it was crossing the highway ahead of us, and we could tell that it was moving very slowly.

We saw it was not a conventional aircraft, and had blue lights at each point of the triangle. The lights were steadily glowing as it flew by at 35 mph, at 1,000 feet in altitude. We had never seen anything like it before. It was probably 400 yards across at least. Other people in cars were standing outside watching. We eventually lost sight of it. I found this picture that is similar but the object we saw was much larger. Thanks to MUFON CMS

Utah Cylinder

SALT LAKE CITY – Mothership videotaped over city on July 13, 2012. A cylinder shaped object was seen over the city once again.

Every few years one is observed.

WITNESS BUZZED BY A BLACK TRIANGLE IN VERMONT

Posted on

January 18, 2012

by

PFEIFER

WITNESS BUZZED BY A BLACK TRIANGLE IN VERMONT

1-5-12 NORWICH VERMONT

While traveling South in the slow lane, on Interstate 91, at 4:50 am, I looked in my drivers side mirror and noticed a Black Triangular object with large yellow lights approximately 50ft. above and directly over the roof of a car, in the fast lane. After about 5 seconds I refocused my driving to the road in front of me as I was headed towards the breakdown lane. I maneuvered my vehicle back into the slow lane and once again looked into the drivers side mirror and the object was gone. The vehicle behind me in the fast lane was still proceeding south behind me. The entire event lasted about 10 seconds. As I proceeded South, still looking through my drivers side window and passenger side window into the sky looking for the object, it didnt reappear! After I proceeded approximately a mile South on the interstate I saw what looked like a red shooting star with a streak in the sky directly in front of me lasting about 2 seconds. NOTE: The above image is a rendering.

Thanks to MUFON CMS system.

The Best Defection made too late! (2014-02-21 19:01)

I only became a Green Bay Packer fan since 2005 after high school. Those green and white jerseys with G in my face daily since 1989 and somehow I hadn't any Packer gear until 2006. After the gold and purple gear constantly alienated me from the rest of the peeps. I must've been a high school retard! At least I did not show it on my class picture by wearing a Buffalo Sabres cap.

Twenty-five years ago I couldn't imagine hating a team and their fans more than the Chicago Bears, but somehow, Minnesota Vikings fans, you've managed to pull off the impossible. You don't know shit about the game. You have no sense of history or tradition.

Teams who win are given respect. Their fans are given respect. The Vikings... are 0-4 in Super Bowls. . It's so bad, it annually helps make the Vikings one of the poorest franchises in the NFL. So, what are you going to do about it, Vikings fan? You're going to go out in public and complain, demand the state finance a new stadium and make a mockery of yourself, even though your state is in major debt and faced with cutting funding for things like... education. Brilliant! Do you know the last time a Green Bay Packers game was blacked out? No, you don't, because it's never happened. Do you know how long the Packers season-ticket waiting list is? Decades. On the other hand, you have the Minnesota Vikings, where anyone can buy season tickets because they're never sold out. In fact, the Viking

In many cases, an inferiority complex results from an imagined feeling of inferiority, rather than an actual one. That certainly isn't the case here. You are inferior, Minnesota Vikings fans. You know it and it shows. And let me tell you this, it's not sexy, cool or even tolerable, for that matter. Your inferiority complex, which rightfully has something to do with that Super Bowl drought, causes you to make overly bold predictions, think the Vikings are better than they really are, act like a prick to all other NFL fans and gloat incessantly when something actually goes right for your beloved team. That's not to mention you don't have even an ounce of humility when the Vikings get their ass beat. I've never once heard a Vikings fan congratulate an opposing team's fans on a win. I've never once heard a Vikings fan empathize with opposing fans after they lose to the Vikings.

Impeachable Offenses: The Case for Removing Barack Obama From Office (2014-02-26 05:13)

The possibility of impeaching Barack Obama based a wide range of alleged constitutional violations already has been discussed by a long list of members of Congress, from Sen. Ted Cruz, R-Texas, to Rep. Duncan Hunter, R-Calif. Now Rep. Paul Broun, a Georgia Republican who is seeking to replace the retiring Sen. Saxby Chambliss, is joining the list.

He's accompanied by a couple of his opponents in the open race.

A video from a forum over the weekend featuring candidates for Chambliss' seat shows Broun and two others, Derrick Grayson, an engineer, and Eugene Yu, a businessman, raising their hands when asked whether they would support impeachment.

A forum moderator asked the candidates: "Obama has perjured himself on multiple occasions. Would you support impeachment if presented for a vote?"

Broun, Grayson and Yu raised their hands.

Several other candidates did not, and there were others vying for the office who were not in attendance.

WND has been reporting on members of Congress who have discussed impeachment. The list now includes:

Rep. Steve King, R-Iowa; Rep. Blake Farenthold, R-Texas; Rep. Steve Stockman, R-Texas; Rep. Bill Flores, R-Texas; Rep. Duncan Hunter, R-Calif.; Sen. Tom Coburn, R-Okla.; Rep. Kerry Bentivolio, R-Mich.; Sen. Ted Cruz, R-Texas; Sen. James Inhofe, R-Okla.; Rep. Jason Chaffetz, R-Utah; Sen. Tim Scott, R-S.C.; Rep. Michele Bachmann, R-Minn.; Rep. Louie Gohmert, R-Texas; Rep. Trey Radel, R-Fla.; and Rep. Ted Yoho, R-Fla.

Read the definitive case for removing Barack Obama from office in "Impeachable Offenses" by Aaron Klein and Brenda J. Elliott.

Several, including King and Farenthold, made comments in interviews with Sean Hannity.

King pointed to the president's actions on immigration, such as his orders for authorities not to enforce current immigration law, as grounds for impeachment.

He said there are multiple violations related to Obamacare and asserted the president's "recess" appointments of judges when the Senate was not actually in recess also is worthy.

The "uber-presidency," King said, has little or no respect for the Constitution.

Farenthold said Obama "is grabbing as much power as he can," but Congress also is doing little to draw in the reins.

The two said that politically, Obama is exercising great power and believes Congress cannot or will not stop him.

"The president knows it; he's exploiting it," King said.

Stockman even handed out in Congress copies of a book that has been described by its authors as the "articles of impeachment" for Barack Obama. Stockman suggested that special investigations and possibly prosecutions are needed in response to Fast and Furious, Benghazi and other Obama scandals.

Rep. Bill Flores, R-Texas, was speaking at a town hall meeting when he considered the idea. A video of his comments was posted at the Western Center for Journalism.

"I've looked at the president. I think he's violated the Constitution. I think he's violated the Bill of Rights," he said.

He said at some point a decision must be made.

"I think if the House had an impeachment vote, it would probably impeach the president."

But he noted there are only 46 members of the GOP in the U.S. Senate, where an impeached president would be put on trial.

To obtain a conviction, the prosecuting team must have 67 votes, and he wasn't sure even all of the GOP members would vote to convict.

"I think he's breaking the law if he strikes without congressional approval," Hunter told the Washington Times regarding Obama's plan to bomb Syria. "And if he proceeds without Congress providing that authority, it should be considered an impeachable offense."

WND previously reported Coburn's statement that Obama is "perilously close" to qualifying for impeachment.

Speaking at the Muskogee Civic Center in Oklahoma, the senator said, "What you have to do is you have to establish the criteria that would qualify for proceedings against the president, and that's called impeachment."

Coburn said it's "not something you take lightly, and you have to use a historical precedent of what that means."

Visit WND's online Impeachment Store to see all the products related to ousting Obama.

Earlier, Bentivolio said it would be a "dream come true" to impeach Obama.

Bentivolio told the Birmingham Bloomfield Republican Club Meeting, "You know, if I could write that bill and submit it, it would be a dream come true."

He told constituents: "I feel your pain and I know. I stood 12 feet away from that guy and listened to him, and I couldn't stand being there. But because he is president I have to respect the office. That's my job as a congressman. I respect the office."

Bentivolio said his experience with the president caused him to consult with attorneys about what it would take to remove Obama from office.

Cruz responded to a question about impeachment after a speech.

"It's a good question," Cruz said. "And I'll tell you the simplest answer: To successfully impeach a president you need the votes in the U.S. Senate."

In May, Inhofe suggested Obama could be impeached over a White House cover-up after the attack in Benghazi, Libya, on Sept. 11, 2012.

He told listeners of "The Rusty Humphries Show": "Of all the great cover-ups in history – the Pentagon papers, Iran-Contra, Watergate, all the rest of them – this ... is going to go down as the most egregious cover-up in American history."

But even with that searing indictment, Inhofe, too, stopped short of calling for impeachment.

Rep. Jason Chaffetz, R-Utah, has offered tentative support for impeachment.

"I'm not willing to take it off the table, but that's certainly not what we're striving for," he told CNN.

One Republican actually has come out and called for the impeachment of Obama, and he did it more than two years ago, before he became a congressman.

Rep. Ted Yoho, R-Fla., posted on his website in June 2011 a list of reasons for impeachment.

Other figures who have discussed impeachment include Glenn Beck, Watergate investigative reporter Bob Woodward, WND columnist Nat Hentoff and a panel of top constitutional experts.

Stockman recently distributed copies of the book, "Impeachable Offenses: The Case for Removing Barack Obama From Office," to the other 434 members of the House of Representatives to bolster his case for a special investigation of the president.

The bestselling "Impeachable Offenses" presents an indictment that goes well beyond today's headlines.

The Daily Mail of London has called "Impeachable Offenses" "explosive," reporting that the book contains a "systematic connect-the-dots exercise that the president's defenders will find troublesome."

Constituents also are reaching some surprising conclusions.

Voters in Republican Rep. Jim Bridenstine's Oklahoma district may look meek and mild, maybe even sweet, but their opinions of President Obama reveal nothing but a battleground "take-no-prisoners" attitude.

One lady, for example, said there needs to be changes in the Senate so "we can impeach the S-O-B."

She complained that Congress is doing nothing, and that "allows this moron to make decisions."

"He has no authority. None."

The video was uploaded just this week, but it's unclear when the meeting was held, and the congressman's office was unable to provide details immediately.

At one point the congressman references "back in April 2013," and it appears to be winter, so likely it was recorded in the past few months.

The congressman had been documenting Obama's "lawlessness."

2nd Walt Disney World vacation (2014-02-27 15:21)

This is the second visit, 17 years after the first one.

I picked Disney World, because everybody else picked it and its completely normal. The #1 vacation destination in the US. It was \$3.50 for a 24 ounce Mountain Dew.

16.3 March

Wounded Warriors in IT.... (2014-03-03 15:59)

Holy crap. I thought a Doctorate of Science is a higher doctorate, and Bachelor of Degree is too advanced. Must be the non-brain damaged ones going into it. I thought Wounded Warriors were all medical coders doing ICD-10-CM codes. Those ICD-10-CM coder jobs never run out. Doesn't make sense.

Tested Red Hat Enterprise Linux (RHEL) 7.0 beta (2014-03-04 05:05)

Only came with solitaire

Stable enough OS, didn't crash with installation. RHEL 7.0 lags a lot / slower then RHEL 6.5. I don't know why they couldn't have KDE 4.11 in 7.0 They should use Gnome 3.12, but they use Gnome 3.8.4 in 7.0. The RHEL 7.0 comes backwards compatible with RHEL 6.5. Doesn't use Debian package. Very low kernel 3.10-54.

Taxing job creators to death. (2014-03-05 21:50)

There is a job deficit in this country. Jobs are in other countries. President Obama is slashing jobs. That's the real reason. We're increasing in GDP, but Democratic Party is slashing jobs by taxing all the businesses who create jobs and moving to Obamacare. It's just not right. Some call this degenerated workers state.

Leon Trotsky always emphasized that the *degenerated workers' state* was not a new form of society, but a transitional phase between capitalism and socialism (and closer to capitalism) that would inevitably collapse into one form or the other. He argued however that whether this downfall led to the restoration of workers' democracy or to capitalist restoration would depend on whether the movement to overthrow the dictatorship of the bureaucracy was led by the organized working class. They're taxing capitalist businesses so they don't hire.

Canada and UK simply have simply more jobs per million then Americans do; whereby, the personal GDP is higher.

Classmates deleting my comments (2014-03-11 12:46)

I was prompted to write this post, after people recently thanked me for publishing their **blog comments**. Meghan Hatalla deleted decent comments on her blog relating to anything. They assumed that as their comments disagreed with me, they would be deleted. I am hearing this more and more often, hence the reason I want to bring this out into the open. Well, Meghan, it's too late. *I'm sorry, but* I'm already well known. Everybody heard of me.

Here's the problem: It seems some well-known blogs refuse to publish comments, if they take an opposing view to the points made in the blog post. Unless a comment is neutral, complimentary or has an argument that can be easily shot down in flames, it's banned from being published.

-

Removing critical blog comments

What amazed me, was that in each case these people say they had left comments that were not offensive, but were removed simply because they made a solid argument that was opposed to the view, expressed by the blogger. In my opinion, it shows a total lack of respect (and self-confidence) on the part of the blogger, if they refuse to allow anyone to disagree with them! I believe the blogger also loses a useful learning opportunity, as banning such comments eliminates the opportunity to scrutinize their point more thoroughly.

Note: Here's how Mark Zuckerberg used criticism, to improve Facebook.

One of the benefits of a blog is that it is designed for communication, rather than broadcasting. Communication needs to be 2 way or multi-way, which means giving people the right to question you, as well as compliment you or agree. Blog comments allow that to happen, if we let them.

However, I warmly welcome you to contribute to anything I write here, if you have something you want to share. That includes expressing a different point of view to mine (so long as we agree my point is *always* right, of course! 🙄)

Yes, your blog is your own property and you can do whatever you want to with it. However, when you decide to ban people from expressing a different point of view from your own, the word soon gets around. Bloggers don't need a reputation like that!

Published my first book (2014-03-11 15:02)

Free Download (updated) I didn't see myself making any money off my first book so it's entirely free to promote my blog! It was quick and easy. I think I'll advertise it on Goodreads.com

Nginx + Magneto (2014-03-19 20:44)

In 2007, I was running OScommerce and Cent OS, Apache, MySQL and PHP. I knew that Magneto ran the LAMP configuration. Reviews and statistics prove Nginx servers have lot less errors then LAMPs. The enterprise ecommerce uses Nginx web server, but needs to be downloaded off the Red Hat respondories. I should have run Magneto on Nginx in 2007 cos OScommerce won't. Nginx should be included on the installation DVD.

```
[root@centos63 ~]# vi /etc/yum.repos.d/nginx.repo
```

```
[nginx]
name=nginx repo
baseurl=http://nginx.org/packages/centos/$releasever/$basearch/
gpgcheck=0
enabled=1
```

2. Perform yum install for nginx :

```
[root@centos63 ~]# yum install nginx -y
```

Examples :

```
[root@centos63 ~]# yum install nginx -y
Loaded plugins: fastestmirror, presto
Loading mirror speeds from cached hostfile
* base: mirrors.hostemo.com
* extras: mirrors.hostemo.com
* updates: mirrors.hostemo.com

11. Diagrams

a. Kronum Round Dimensions

b. Kronum Round Zones

c. Scoring

d. Prime Rush Alignment

Section 1 – Kronum Round and Equipment

I. Kronum Round Dimensions

a. The Kronum Round shall be measured and marked as shown in the Kronum Round diagram. See Diagram 1

b. The playing surface shall be a generally level circular area.

c. The game can be played outdoor or indoor on a natural or artificial surface

d. The Kronum Round shall be a minimum of 45 yards to a maximum of 70 yards in diameter circle marked around the perimeter of the field.

i. The recommended diameter is 50 yards.

e. The Boundary Ring is the outermost circular line, which limits the inbounds playing area of the Round.

f. The Prime Ring is a 16-yard diameter circle marked from the center of the field, parallel to the Boundary Ring.

g. The Pivot is a 1-yard diameter circle marked from the center of the field, parallel to the Boundary Ring.

h. The Goal Zones are 5-yard diameter half circles evenly spaced from the center of the goal

i. The Wedge Zone shall be marked 18 yards from the center of the corresponding Goal Zone. This will be the top of the Wedge Zone.

j. The top of the Wedge Zone shall be a 90-degree angle that extends until it intersects with the Boundary Ring.

k. The Wedge Point is the area in between the top of the Wedge Zone and the Prime Ring.

l. The Cross Zone includes all of the distant quadrants as well as the Prime Ring. The Cross Zone shall be marked with one vertical line and one horizontal line that divide the field into four equal quadrants. The Cross Zone lines will extend from the Prime Ring to the Boundary Ring. The Cross Zone lines will not be drawn inside the Prime Ring or Pivot.

II. Zones

a. Goal Zone

i. Players on offense and defense may dribble, roll, hold, pass, catch, trap, deflect, kick, or shoot the ball with their arms, hands, torsos, legs, feet, or head. Players may play the ball with any part of their bodies; however, players must dribble as defined in Section 4.IV. A player may transition from playing the ball with his hands to his feet and vice-versa.

b. Wedge Zone

i. Players on offense and defense may dribble, trap, deflect, pass, kick, or shoot the ball with their legs, feet, torsos, or head.

ii. The offense may not play the ball with their arms or hands (as defined in Section 9.I.f) at any time.

iii. A defensive player may block or deflect a ball with his hands while established in this zone. After a player blocks or deflects a shot with his hands, that same player may be the first player to touch the ball with his hands or feet in any zone.

iv. After a defensive player blocks or deflects a shot, that same defensive player may then punch or hit the ball with his hand out of the Wedge Zone.

1. After a player punches or hits the ball with his hand in the Wedge Zone, that same player may not be the first person to touch the ball with his hands or feet in any zone. This is illegal defensive hands in the Wedge Zone and will result in a penalty shot.

c. Flex Zone

i. See Section 1.II.a.i

d. Cross Zone

i. See Section 1.II.a.i

e. Prime Ring

i. Players must use this zone to clear the ball as defined in Section 4.II and Section 4.III.

ii. Once the ball is cleared, this zone is considered part of the Cross Zone for scoring and game play purposes.

f. Pivot

i. Each period starts with a prime rush that is bounced at the center of this zone.

ii. Once the period has started, this zone is considered part of the Cross Zone for scoring and game play purposes.

iii. All fouls are restarted within this zone

III. Equipment

a. Kronum ball

i. Shall be an officially approved Kronum ball.

ii. If the ball becomes defective in any manner during the game, play is stopped, and an official can substitute a new ball into play.

b. Kronum goal

i. The chamber of the goal is the bottom main region of the goal and shall measure 16 feet wide and 8 feet high

ii. The crown is the forward, upper region and shall come out on an arc and measure 2.5 feet high.

iii. The crown shall have up to five rings that shall measure between 18-24 inches in diameter.

c. Uniform

i. Each player on both teams is required to be in uniform to be eligible to play. The uniform consists of team jersey, team shorts, and team colored socks.

d. Footwear

i. Athletic turf shoes are recommended

ii. Any type of cleats or spikes are prohibited

e. Optional equipment

i. Mouth guard

ii. Shin guards

iii. Athletic gloves (i.e. Soccer goalie gloves, football wide receiver gloves)

iv. If a player has a cast or other protective equipment due to injury, it must be covered and padded. It is the official's final judgment if the equipment is safe enough to enter the game.

1. If that player is to ever use that equipment to gain an advantage or physically attack another player on the field, the person will be immediately ejected from the game. That player can no longer participate in any future games until the equipment is removed.

f. Unapproved Equipment

i. If any player has unapproved equipment, that player shall be removed from the game until a dead ball when an official can inspect the new equipment and approve it.

Section 2 – Officials

I. Duties of the Officials

a. All Kronum matches shall be governed by the official Kronum Rules and enforced by Kronum officials. All calls shall be made at the officials' discretion. All decisions made by the officials are final

- b. The game officials shall be one head referee, one assistant referee, and one scorekeeper.
- c. Officials shall wear the uniform required by the Kronum League.
- d. The officials shall, prior to the start of the game, inspect and approve all players' equipment and field equipment.
- e. The head official shall have the power to make decisions on any point not specifically covered in the rules, and to overturn any call made by the assistant official and scorekeeper.
- f. The officials shall not permit any player to wear any type of jewelry.
- g. The officials shall not permit any player to wear any equipment that is dangerous to other players.
- h. Proper footwear is required. Any type of cleats or spikes, rubber or metal, are not permitted.
- i. Shin guards and mouth guards are optional equipment permitted on the round.
- j. Any equipment designed to gain a player an advantage shall not be used.
- k. The head official shall check the game ball to see that it is properly inflated.
- l. The head official shall spike the ball for the prime rush.
- m. Officials must meet with team captains prior to the game to address any rule clarifications or interpretations.

II. Different Decisions by Officials

- a. It is the primary duty of the head official to spike the ball at the start of each period.
- b. It is the primary duty of the assistant official to assure no prime rushers leave early, and that only the prime rushers enter the Prime Ring before the ball exits the Prime Ring.
- c. In the event that a violation and foul occur at the same time, the foul will take precedence.

III. Time and Place for Decisions

- a. In the event that the officials give conflicting signals, the officials may have a quick discussion at the center of the field. The head official has the final call.
- b. When a shooting foul occurs, an official will blow his whistle and signal to stop clock by waving his hands in an overhead crossing motion. The official will then signal the type of foul and where the shot will take place.
- c. When a team is entitled to a throw-in, after the ball is out of bounds, an official shall clearly call out the color of the team that is awarded the throw-in.
- d. The official does not need to call out the color of the team who is awarded a free clear after a score, unless a team score's on its own goal.
- e. When a whistle is erroneously sounded, whether the ball is in a possession or non-possession status, it is an inadvertent whistle. Play is stopped, and the team with possession of the ball is awarded a throw-in at the closest Cross corner.
- f. An official may suspend play for any unusual circumstance.

IV. Correcting Errors

- a. Officials may correct an error if a rule is inadvertently missed and the error is corrected within 20 seconds.
- b. All play that occurs shall be nullified within the 20-second time period.
 - i. Exception – All acts of unsportsmanlike conduct or flagrant fouls, and points scored from them, shall not be nullified. The game clock shall be reset and play shall resume from the spot of the corrected call.

V. Duty of the Score Keeper

- a. Set the game clock at the start of each period.
- b. Record the score after each period.
- c. Start and stop the game clock during shooting fouls, timeouts, and any violation/foul under 2 minutes in the third period.
- d. Keep time during a time out and notify the head official to signal a 10 second first whistle, as well as the end of time out second whistle
- e. Record the name and number of the four prime rushers at the start of each period.
- f. Set the possession arrow to the loser of the prime rush of every period.
- g. Record all time outs taken by both teams

Section 3 – Players, Coaches, Spectators, Substitutions

I. Team

- a. Each team will have 10 players on the field. A team may not be reduced to less than 9 players. A team reduced to less than 9 players will result in a forfeit. If a player in the game receives a second technical foul, resulting in ejection,

and it results in his team having less than 9 eligible players on the field, the game will end in a forfeit, and the opposing team will be declared the victor.

II. Team Captain

- a. One team captain shall be designated per team per game. The captain is the only player who may ask an official about a rule interpretation in between periods or during a timeout. He may not discuss a judgment decision.
- b. If the captain is on the bench, he remains the only player who may approach and discuss with an official
- c. If the captain is removed from the game from illness, injury, ejection, etc., a new captain will be named for the remainder of the game.

III. Coaches and Other Personnel

- a. Coaches and other personnel may not enter the field of play or cross the scorers table at the center of the field. Failure to comply will result in an unsportsmanlike conduct technical foul.
- b. Any team personnel on or around the bench area must conduct themselves in a manner that reflects favorably on the league.

IV. Spectators

- a. Must be respectful of all officials, players, coaches, and other spectators
 - i. If a spectator verbally or physically interferes with any person or object on the field that distracts from the game, an official's timeout will be called and the spectator will be removed from the building
 - b. If a player verbally abuses a spectator, an official's timeout will be called and the player will be issued a personal technical foul.
 - c. If a player physically abuses a spectator, an official's timeout will be called and a personal technical foul II will be issued, and the player will be ejected from the game and the building, field, or arena.

V. Substitutions

- a. Substitutions are unlimited.
- b. Substitutions are made during the regular flow of the game., during a live or dead ball.
- c. All substitutions must happen between the Wedge Zone and the Cross Line in front of that team's bench area.
- d. A Substitute player must wait until the active player completely crosses over the Boundary Ring. Failure to do so will result in a team technical of too many players on the field.

Section 4 – Gameplay

I. Offense/Defense

- a. The last team to touch the ball inside the Prime Ring, take a penalty shot, or throw the ball in bounds is on offense. This team can attack any goal while on offense and take an unlimited amount of shots.
 - i. Exception – If a team gains possession of the ball while on defense and calls a timeout, they are awarded a throw in at the nearest Cross corner, but still must clear the ball.
- b. A defensive player has the right to challenge an offensive player for space in the playing area and for control of the ball, so long as he does not commit an act of misconduct, violation, or foul.

II. Clearance

- a. If the defensive player gains possession of the ball, he must clear the ball. His team is on defense until he legally clears the ball
- b. If the defensive team gains possession, does not clear the ball, and then loses possession, the opposing team does not need to re-clear the ball.
- c. A legal clear is when a player that is established in the Prime Ring touches the ball. The last team to touch the ball inside the Prime Ring is on offense.
 - i. Exception – If a player jumps from the Prime Ring, contacts or possesses the ball while in the air, and lands in another zone, the ball is not cleared
- d. If a player is in possession of the ball and steps into the Prime Ring with one or two feet, the ball is cleared
- e. Any player may challenge a clear.
- f. If a turnover occurs inside the Prime Ring, the clear is considered complete immediately.
- g. A team that is awarded a throw in is considered on offense, and therefore does not have to clear the ball.
- i. Exception – A team that is on defense, has possession of the ball, and calls a timeout is awarded a throw in from the nearest Cross corner, but must still complete the clear after inbounding the ball.

III. Free Clear

- a. After any score, one player from the team that was scored on must pass the ball with any part of his body from the Goal Zone into the Prime Ring.
- b. The new defensive team may not challenge the ball until the new offensive team makes contact with it inside the Prime Ring
 - i. Challenging the ball is defined as being inside the Prime Ring, interfering with the throw from the Goal Zone, and/or interfering with the player in the Prime Ring. A defensive player may pass through the Prime Ring as long as he does not interfere with the offensive team's ability to complete the free clear and/or the ability to move in a direction he pleases immediately after completing the free clear.
 - ii. A player that is caught inside the Prime Ring while the offensive team is completing a free clear must first vacate the Prime Ring in order to challenge the player inside the Prime Ring.
- c. The new defensive team can establish presence anywhere on the field, as long as it does not interfere with the free clear.
- d. Once a defensive player establishes presence on the field and both feet are planted, he is guaranteed that spot on the field. The defensive player's arms must be at his side. Arms up in the air will be an interference of the free clear, which is a violation.
 - i. If the defensive team interferes with the free clear, it is a defensive free clear interference, and results in a team technical foul.
 - ii. If the offensive team hits the established defensive player, the result is a stray clear. Once a defensive player has stopped moving and has established presence, the offensive team must avoid contacting that player with the ball.
 1. If that player moves his feet and makes contact, he will be at fault.
- e. If the offensive team intentionally throws the ball at an offensive player, a technical foul will be given for unsportsmanlike conduct.
- f. The offensive player receiving the free clear must be established in the Prime Ring. A player may complete the free clear while the ball is in the air, as long as any foot in contact with the ground is within the Prime Ring.
 - i. If both feet are in contact with the ground, both feet must be within the Prime Ring.
- g. A ball that is in contact with the ground must completely enter the Prime Ring before the now offensive player may touch it.
- h. A free clear attempt that hits a teammate, an official, the goal structure, or misses the Prime Ring is declared a stray clear. See Section 10.I.g

IV. Dribbling

- a. Upon taking one-handed or two-handed control of the ball, a player may take up to, but not more than, two complete steps in sequence with opposite feet before releasing the ball in the act of dribbling, passing, or shooting. Upon taking two complete steps in sequence with opposite feet, a player may not lift a foot before dribbling or passing, unless that player takes a shot on goal before completing a third step. Upon taking one-handed or two-handed possession of the ball, a player may take an unlimited number of pivot steps with a single Free Foot, so long as his Anchor Foot does not leave the playing surface. The Anchor Foot is the foot to first touch the playing surface when the player takes possession. The Free Foot is the foot to last touch the playing surface after the player takes possession. If both feet are touching the playing surface when the player takes possession, then the player may elect to designate either foot as his Anchor Foot by moving or lifting his Free Foot. Upon taking two pivot steps with his Free Foot, a player loses the right to lift his Anchor Foot, unless he takes another dribble

Section 5 – Zone Presence, Scoring, and Kronos

I. Zone Presence

- a. The zone a player is established in when he scores will determine the amount of points awarded. Zone presence is established by one foot and/or hand making contact with the ground in a zone. If a player releases the ball in the air, he will be awarded the amount of points equal to the zone he was last present in. If contact is made above a zone while one foot is planted on the ground in another zone, the points awarded are decided by where the player is in contact with the ground. Exception: If a player is established in one zone, but the ball is on the ground in another zone, the ball determines presence. Example 1: The ball bounces in the air above the Goal Zone. A player has one foot planted in the Wedge Zone and extends the other foot, makes contact with the ball above the Goal Zone, and

the ball passes over the goal line in the chamber. The player is awarded two points because he is established in the Wedge Zone. Example 2: The ball is on the ground in the Goal Zone. A player has one foot planted in the Wedge Zone and extends the other foot, makes contact with the ball that is on the ground in the Goal Zone, and the ball passes over the goal line in the chamber. The player is awarded one point because the ball was established on the ground in the Goal Zone.

II. Scoring

- a. A legal goal can be scored when a live ball from the playing area passes fully across the goal line of the chamber or the plane of a crown ring.
- b. If the ball makes contact with an official and crosses the goal line or the plane of a crown ring, the goal counts.
 - i. The team that was on offense will be awarded the amount of points that would be given if the ball were deflected by a defender.
 - ii. The offensive player that last touched the ball will be credited the points.
- c. A throw in is a dead ball, and therefore cannot be scored without being touched by another player. If an offensive player attempts a shot on goal from a throw in, and a defensive player touches it, it is considered in play, and may then cross the goal line or plane of a ring and count as a legal score.
- d. A kick or throw from the Goal Zone that passes fully across the goal line into the chamber is awarded one point. A kick or throw from the Goal Zone that passes fully across the plane of a crown ring is awarded two points. The Goal Zone line is part of the Goal Zone. If a player's foot or hand is on the Goal Zone line when he scores, the player is considered in the Goal Zone, and shall be awarded the appropriate amount of points.
- e. A kick from the Wedge Zone that passes fully across the goal line into the chamber is awarded two points. A kick from the Wedge Zone that passes fully across the plane of a crown ring is awarded four points. The Wedge Zone line is part of the Wedge Zone. If a player's foot is on the Wedge Zone line when he scores, the player is considered in the Wedge Zone and shall be awarded the appropriate amount of points.
- f. A kick or throw from the Flex Zone that passes fully across the goal line into the chamber is awarded two points. A kick or throw from the Flex Zone that passes fully across the plane of a crown ring is awarded four points.
- g. A kick or throw from the Cross Zone that passes fully across the goal line into the chamber is awarded four points. A kick or throw from the Cross Zone that passes fully across the plane of a crown ring is awarded eight points. This is also called a Kronum. The Cross Zone line is part of the Cross Zone. If a player's foot is on the Cross Zone line when he scores, the player is considered in the Cross Zone and shall be awarded the appropriate amount of points.
- h. A kick or throw from the Wedge Point during a penalty shot that passes fully across the goal line into the chamber is awarded three points. A kick or throw from Wedge Point during a penalty shot that passes fully across the plane of a crown ring is awarded six points.
- i. A kick or throw from the offense that is redirected by a defensive player, and then passes fully across the goal line of the chamber or plane of a crown ring shall be awarded the amount of points from where the shot was initially taken by the offense. The offensive player who took the initial shot will be credited the points.
- j. If a defensive player possesses the ball and scores on his own goal, the points will be awarded to the offensive team as if it was an offensive player who took the shot. Points will be credited to the last person on the offensive team to touch the ball.
- k. A kick or a throw from the Wedge Point during a penalty shot that is touched by the wedgeback is now in play. If the wedgeback redirects the ball into a distant quadrant and it passes across the goal line of the chamber or plane of a crown ring, it will be awarded four or eight points, respectively, and be credited to the offensive player that took the penalty shot.

III. Krones

- a. The team that has both fewer fouls than its opponent and less than 15 total fouls in the match is awarded one Krone. Krones are recorded along with Wins and Losses in the Kronum League standings and factors into determining the final standings at season's end.

IV. Standings

- a. The final standings at season's end will be determined in the following order:
 - i. Win percentage
 - ii. Head to head

iii. A three point system of points for, points against, and Kronos

1. The team with more points in the three point system will be ranked above the team with less points

iv. Coin flip

Section 6 – Duration of Match, Periods, and Time Factors

I. Duration of Match

a. All regulation Kronum League periods will be 20 minutes in length.

b. One and a half minutes will be given in between each period, including at the end of the third period if the game is tied and results in a shootout.

II. End of Period

a. A period ends when time expires.

i. If a live ball is in flight, the period ends when the shot is made, missed, or touched by an offensive player.

ii. If a timeout is taken at the same time the period ends, the period ends and the timeout is not awarded.

III. Tie Score Shootout

a. There are no overtime periods in Kronum. If the game results in a tie after three periods of play, the game will go into a shootout.

b. The captain will select three shooters and one wedgeback. The captain will choose the order in which the three offensive players will shoot. Each team will alternate shots. The team with the most points after all offensive players have shot is declared the winner. If the score is tied after all offensive players have shot, the game will go into a sudden death shootout in reverse order (i.e. 1,2,3,3,2,1) until one team has more points than the other at the end of the round. In a shootout, a goal in the chamber is worth three points. A goal through any of the crown rings is worth six points.

IV. Clock Stoppage

a. The clock shall be stopped whenever the official signals for a clock stoppage. This is shown by waving both arms overhead.

b. The following result in clock stoppages:

i. Shooting foul

ii. Technical foul

iii. 30 second timeout

iv. One minute timeout

v. In the last two minutes of the third period, any violation, foul or out of bounds.

vi. Any other emergency

c. A team is allowed 30 seconds to replace an ejected or injured player.

d. The clock will start once a player on the field touches the ball. Example: Team A is fouled during a shot. Clock stops. The clock will restart when another player touches it. If Team A shoots the ball and the wedgeback of Team B makes contact with the ball, regardless of the result of the shot, the clock starts. If Team A shoots the ball and the ball goes off the crown or post, the clock does not start until a player touches the ball.

V. Timeouts

a. Each team is entitled to (1) one minute timeout and (2) 30 second timeouts. The timeouts can be called at any time in the game.

b. A timeout shall be awarded only during a dead ball or when the team requesting the timeout has possession of the ball.

c. When a timeout is awarded to either team, the full time will be given to both teams.

d. If a timeout is called while a team is on defense, that team must still clear the ball.

e. If a timeout is called when a team has no remaining timeouts, a team technical is given, and the opposing team is awarded a penalty shot and a throw in from the nearest Cross corner.

f. If the defensive team calls a timeout after they are scored on, they are awarded the time out any time after the ball completely crosses the goal line. They do not have to complete the free clear to be awarded the timeout.

g. A player shall not be granted a timeout if both of his feet are in the air. One foot must be inbounds to establish himself in play.

h. The officials may call an official's timeout at any time during the game for player injuries, an officials meeting at

the scorer's table, an emergency, or any other reason they deem necessary for stoppage of play.

VIII. Time in

- a. The clock will restart once a player on the playing field touches the ball.
- b. After a timeout is over, the official will signal for the ball to be restarted at its necessary area. If the opposing team is not on the field by the time the official signals for the start of play, a delay of game team technical foul will be given.

Section 7 –Start of Game/Periods, Restarts

I. Prime Rush

- a. Each game/period starts with a prime rush. The clock will start when the prime rush touches the ground. The prime rush consists of two players from each team converging on a ball that is bounced at the center of the field inside the Pivot. All four prime rushers must start on a Wedge Point. The rest of the players on the field must have at least one foot on the Prime Ring. The home team will have 4 players line up on each of the vertical sides of the Prime Ring in reference to the scorer's table. The away team will have 4 players line up on each of the horizontal sides of the Prime Ring in reference to the scorer's table. The prime rushers will line up on the right Wedge Point of their corresponding side of the Prime Ring. Once the prime rush is down, only those four players may enter, and only one of those four players may bring the ball out. The last prime rusher to make contact with the ball before it exits the Prime Ring will be declared on offense. All other players are not allowed to enter the Prime Ring until the ball exits the Prime Ring. If another player enters the Prime Ring and interferes, it is prime rush violation, and the opposing team is awarded a throw in at the nearest Cross corner.
- i. An outside player who is established outside of the Prime Ring may lean in and possess the ball, as long as he is established outside of the Prime Ring and the ball is in neutral space in the air.
- ii. If the ball is in contact with the ground inside the Prime Ring, it is considered established in the Prime Ring, and therefore must be exited by a primer rusher.

II. Restarts

- a. After a dead ball, the ball will be put in play by:
 - i. A prime rush (beginning of period only)
 - ii. Throw in from any of the four Cross corners
 - iii. Throw in from the Pivot
 - iv. Penalty shot from the Wedge Point
- b. A throw in from the Cross corner must be taken within one yard on either side of the Cross corner of the Cross and the Boundary Ring.
- c. All violations result in a throw in from one of the Cross corners. See Section 10.I for all violations.
- d. All fouls on the ground result in a throw in from the Pivot. See Section 10.II for all fouls on the ground.
- e. A throw in from the Pivot must be taken with at least one foot planted in the Pivot.
- f. All shooting fouls result in a penalty shot. See Section 10.III for all shooting fouls.
- g. A penalty shot must be taken from the Wedge Point at the quadrant designated by the official.
- h. All technical fouls result in a dead ball penalty shot and a throw in from the nearest Cross corner. See Section 10.IV, 10.V, and 10.VI for all technical fouls
- i. Technical Foul penalty shots must be taken from the Wedge Point at the quadrant designated by the official.

III. Live Ball

- a. The ball becomes live when:
 - i. It touches the ground during the prime rush at the start of the period
 - ii. It is given to a player by an official to throw in
 - iii. It is given to a player by an official to take a penalty shot
- b. If the ball makes contact with an official and stays inbounds, the ball is live and play will continue as normal.
- c. If ball makes contact with an object above the inbounds playing field, the ball is live.

IV. Dead Ball

- a. The ball becomes dead and remains dead when the following occurs:
 - i. Official blows his whistle and stops play
 - ii. The ball makes contact with any player or object out of bounds
 - iii. Penalty shot that will not remain in play (technical foul, shootout)

iv. Time expires at the end of a period, except when ball is in flight. Ball will become dead once shot is missed, made, or touched by an offensive player.

v. The ball makes contact with an official and goes out of bounds.

1. The team who last touched the ball will be charged an out of bounds violation, and the opposing team will be awarded a throw in at the nearest Cross corner.

Section 8 – Out of Bounds and Throw In

I. Player

a. A player is out of bounds when he touches the field or any object outside the Boundary Ring. For a player in the air, his location is wherever he last touched the field. A player that exits the round may not be the first player to make contact with the ball after re-entering the round.

II. Ball

a. The ball is out of bounds when it touches a player, object, or field that is outside the Boundary Ring. The ball is also out of bounds if it touches the outside of the top of the crown netting.

b. If two players touch the ball simultaneously, the result will be a jump ball, and the team that lost that period's prime rush will be awarded a throw in.

III. Throw in

a. A throw in must be taken from one of the four Cross corners or the Pivot at the center of the field.

b. Opponents must be at least two yards away from the spot of the inbounds, unless an offensive player is receiving the ball less than two yards from the inbounds. If the offense has a player within two yards of the throw in spot, the defense may defend that person.

c. All players must be outside of the Pivot if the throw in is taken place from the Pivot.

d. A player may not hand the ball off to a teammate.

e. A legal throw in consists of:

i. Taking no more than two complete steps before releasing the ball.

ii. Releasing the ball with one or two hands outside of the Boundary Ring at the Cross corner or inside the Pivot.

f. A throw in at the Cross corner starts when the player establishes himself at the throw in area with possession of the ball. Once one player has possession of the ball in the throw in area, another player may not take his place, unless that team chooses to use a timeout.

g. A throw in at the Pivot starts when the player establishes himself at the throw in area with possession of the ball. Once one player has possession of the ball in the Pivot, another player may not take his place, unless that team chooses to use a timeout.

h. A player has 5 seconds to throw the ball in. Failure to do so results in a turnover.

i. A throw in is an indirect throw. Another player on the field must touch it in order to count as a goal. If a goal is scored directly from a throw in, the opposing team will be awarded a throw in at the original spot of the throw.

j. The player throwing in the ball may not be the first player to touch the ball until it has touched another player.

k. If a throw in does not touch another player on the field, the ball will be inbounded at the closest Cross corner where the ball went out of bounds.

Section 9 – Penalty Shot

I. Positions

a. The shooter may line up anywhere within the Prime Ring of the quadrant the penalty shot is being taken.

b. The wedgeback must have both feet on the goal line.

c. All other players must stand behind the Cross Zone line in a distant quadrant.

d. If the ball is being kicked, it must be positioned within the Wedge Point.

e. If the ball is being thrown, punted, or dropkicked, the shooter will hold the ball.

II. Shooter and Wedgeback

a. If the penalty shot was awarded because of a shooting foul, the player who was fouled shall take the shot in any manner he prefers.

b. If the penalty shot was awarded due to a technical foul or hand ball in the wedge, any player on the field may take the shot in any manner he prefers.

c. In any penalty shot, the defense can choose any player to play wedgeback, as long as he was on the field at the

time of the foul/violation.

d. A team may not substitute a player from off the field to be the shooter or wedgeback.

e. If a shooter and/or wedgeback is injured or ejected from the game and cannot attempt the shot, the opponents captain will choose a player from the opponents bench to take the shot.

III. Procedure

a. The shooter must wait for the official to signal by whistle that he may start his penalty shot.

b. The shooter has 15 seconds after the whistle to attempt the penalty shot.

c. The shooter has the following options:

i. Dribble up to the line with his hands and throw, punt, dropkick, strike the ball with any part of his body within the Prime Ring

ii. Stand stationary and throw

iii. Strike a stationary ball on the Wedge Point with an approach

iv. Strike a stationary ball on the Wedge Point without an approach

d. The wedgeback must have both feet touching the goal line until:

i. The shooter starts his approach

ii. The shooter releases or contacts the ball

e. The shot must be a legal throw or kick taken behind the Prime Ring line of that quadrant. The approach must be started within the Prime Ring of the quadrant that the penalty shot is being taken.

f. If there is no approach, the wedgeback must have both feet on the goal line until the shooter releases or contacts the ball.

g. If the wedgeback leaves the goal line early, the shooter will continue with the penalty shot. If the shooter scores, the goal counts and play continues as normal. If the shooter misses, the play will be blown dead for the wedgeback violation, and the shooter will take the penalty shot again.

h. All players other than the shooter and wedgeback must remain outside of the quadrant until the shooter releases the throw or makes contact with the ball with his foot.

i. If a defensive player enters the quadrant before legally allowed, the shooter continues with the penalty shot. If the shooter scores, the goal counts and play continues as normal. If the shooter misses, the play will be blown dead for illegally entering the quadrant, and a second penalty shot will be taken.

j. If an offensive player enters the quadrant before legally allowed, the penalty shot will be immediately blown dead, and the defense will be awarded a throw in from the nearest Cross corner.

k. If both an offensive and defensive player enters the quadrant before legally allowed, the penalty shot will not count, and a second penalty shot will be taken.

l. To be recorded, the penalty shot must do one of the following without another player's assistance, other than the wedgeback:

i. Cross the goal line for a score

ii. Be saved by the wedgeback

iii. Make contact with the goal structure

iv. Be thrown, punted, or kicked out of bounds

m. If a penalty shot is taken and does not satisfy any of Section 7.II.I, the shot will be declared an abandoned penalty shot, and will result in a throw in by the defense at the nearest Cross corner

n. Once the ball makes contact with the goal structure or wedgeback, the ball is live, and may be contacted by any player, including the shooter.

o. Neither team may distract or taunt the shooter or wedgeback in any way after the penalty shot has started, as signaled by the official

i. If defense distracts the shooter and shot goes in, the goal counts. Play continues as normal.

ii. If defense distracts the shooter and shot does not go in, an additional shot will be awarded to the shooter.

iii. If the offense distracts the wedgeback, the shot will be called dead and the defense will be awarded a throw in at the nearest Cross corner.

Section 10 – Violations and Penalties

I. Violation – Results in change of possession and throw in at nearest Cross corner

a. Ball out of bounds

i. See Section 8.II

b. Traveling

i. A player must legally dribble the ball as defined in Section 4.IV

c. Illegal throw in

i. See Section 8.III

d. Three seconds in the Goal Zone

i. When the ball has entered a quadrant, no offensive player may be established (as defined in Section 4.I) in that Goal Zone for three seconds. Once a player establishes himself in another zone, the three seconds restart. If a player is established in both the Goal Zone and Wedge Zone, the time shall not start. When a player is established in only the Goal Zone, time shall start.

ii. Once an offensive player gains possession of the ball inside the Goal Zone, he has three seconds to score or get the ball out of the Goal Zone.

e. Two or more players in the Goal Zone without the ball

i. Only one offensive player may enter the Goal Zone without the ball. Once the ball enters the Goal Zone, an unlimited amount of offensive players may be in the Goal Zone for an unlimited amount of time.

f. Offensive hands in the Wedge Zone

i. An offensive player may never make contact with the ball with any part of his arm while established (as defined in Section 4.I) in the Wedge Zone. The arm shall be considered any part of the body lower than the shoulder extending to the fingertips. A ball contacted with the shoulder is legal.

g. Stray clear

i. Once scored on, possession immediately changes. The newly deemed offensive team must clear the ball from the Goal Zone into the Prime Ring. Failure to throw or kick the ball from the Goal Zone to the Prime Ring results in a stray clear.

ii. If a player attempts the free clear and it hits the any part of the goal structure or an official and does not reach the Prime Ring, it will be deemed a stray clear.

h. Offensive free clear interference

i. After the initial throw or kick, an offensive player may not assist the free clear in any way. No offensive player may touch the ball until it enters the Prime Ring.

i. 10-second shooting violation

i. It is at the referee's discretion to issue a 10-second shot clock.

ii. If an official deems a team excessively stalling, he will give a 10-second warning. The offensive team then has 10 seconds to attempt a shot. If a player not in the Goal Zone blocks a shot, it is not considered a shot attempt. A shot is any attempt with the ball that makes contact with the goal structure, is saved by a player in the Goal Zone, or crosses over the goal line or plane of a crown ring.

j. Five second trapped player

i. If a player is in possession of the ball and does not make an attempt at advancing the ball in five seconds, that player will be deemed a trapped player.

k. Five second throw in violation

i. A player has five seconds from when he establishes himself at the throw in area, as defined in Section 7.III to throw the ball in.

l. Five second free clear violation

i. A defensive player that is scored on has five seconds from the time the ball crosses the goal line or plane of a crown ring to complete a free clear.

m. Held ball

i. When both teams have simultaneous possession of the ball. The jump ball shall be awarded to alternating teams starting with the team that lost the Prime Rush at the start of the period.

n. Prime rush violation

i. After a prime rush, a player must wait until the ball exits the Prime Ring as defined in Section 6.I.

o. Abandoned penalty shot

- i. During a penalty shot attempt, the shot must fulfill at least one requirement in Section 8.III.I to be recorded. If the shot does not fulfill at least one requirement, it will be an abandoned penalty shot.
- p. Illegal prime rush entrance
 - i. During the prime rush, a non-prime rusher must wait for the ball to exit the Prime Ring before making contact with the ball. If a non-prime rusher is present outside the Prime Ring, he may lean in and gain possession of the ball if it is in the air, which is neutral space.
- q. Illegal offensive quadrant entrance
 - i. During a penalty shot, all players other than the wedgeback and shooter must remain outside of the quadrant where the penalty shot is being taken until the ball is either released or contacted by the shooter
- II. Foul on the Ground – Results in change of possession and throw in at nearest Cross corner
 - a. Reaching
 - i. A player may not reach around a player with both hands in an attempt to gain an advantage or to gain possession of the ball
 - ii. If the offense gains an advantage from defensive reaching, the official will call out advantage, which notifies players that it was a foul, but it is more beneficial at this time for the offense for the play to continue.
 - b. Hacking/Slapping
 - i. A player may not hack or slap and make contact with a player's body in an attempt to gain an advantage or to gain possession of the ball
 - ii. If the offense gains an advantage from the hacking or slapping, the official will call out advantage, which notifies players that it was a foul, but it is more beneficial at this time for the offense for the play to continue.
 - c. Grabbing/Holding
 - i. A player may not grab/hold any part of another player's body in an attempt to gain an advantage or to gain possession of the ball
 - ii. If the offense gains an advantage from the grabbing/holding, the official will call out advantage, which notifies players that it was a foul, but it is more beneficial at this time for the offense for the play to continue.
 - d. Defensive contact with passer
 - i. While attempting a pass, a defensive player may not make contact with the passer's arm.
 - e. Offensive charge
 - i. If a defender has stopped his momentum and is occupying an area on the field, he is entitled to that area on the field from the ground to the ceiling. If an offensive player jumps into the defensive player's area while the defensive player is within the plane above his area on the field, it is a charge.
 - ii. If the defender jumps, leans, or reaches forward, backward, or to the side, he is giving up his ability to take a charge.
 - iii. The defender must stay within his area and the plane above him to take a charge.
 - f. False dive
 - i. If it is deemed by an official that an offensive player has taken a false dive to gain an advantage, the play will be whistled dead and the defense will be awarded a throw in from the nearest Cross corner.
 - ii. If it is deemed by an official that a defensive player has taken a false dive, the dive shall be ignored and play will resume as normal.
 - iii. If a player or team excessively false dives, a warning will be given to the player or team. The next occurrence will result in an unsportsmanlike conduct technical foul.
 - g. Offensive foul in the Goal Zone
 - i. An offensive player may not foul an defensive player while he is in possession of the ball in the Goal Zone whether he is passing, shooting, or on the ground.
 - h. Wedgeback interference
 - i. An offensive player may not interfere with a wedgeback in the Goal Zone at any time during the game.
 - ii. On a quick transition, the defensive player now turned offensive player is entitled to the space he is occupying, as long as he remains stationary. Any movement from that player can be deemed interference at the referees discretion
 - i. Wedgeback Obstruction
 - i. An offensive player may not occupy a space in the Goal Zone or Wedge Zone and obstruct the wedgeback's view
 - j. Illegal pick

i. An offensive player's feet must be set and his arms must be at his sides or straight up in the air to set a pick. He may not lean or jump into a defensive player while setting a pick. If feet are moving, arms are out to side, or the player leans in one direction, it is an illegal pick.

k. Foul off ball

i. Any defensive foul off of the ball during a shot will be a delayed call.

1. If the result of the offensive shot is a goal

a. The offensive team retains possession at the nearest Cross corner

2. If the result of the shot is not a goal, it is a dead ball and

l. Defensive charge

i. A defender may not run through a pick

III. Shooting Foul – Results in a penalty shot

a. Defensive interference on shot attempt

i. A defender may not contact the shooter's arm from below the shoulder to the wrist during a shot attempt.

1. The hand that is in possession of the ball is considered part of the ball. If a defender contacts the hand or ball of the shooter during a shot attempt, it is legal

ii. A defensive player may not shove or push an offensive player during a shot attempt.

iii. Body to body contact in the air is illegal

1. If a shooter and defender simultaneously jump into each other in a neutral vertical plane, no foul shall be called.

iv. If shooter scores while being fouled, the shot counts and the shooter is awarded a penalty shot

b. Defensive hands in the Wedge Zone

i. See Section 1.II.b.iv

c. Intentional wrap anywhere on the field

i. A player may not intentionally wrap a player, hindering their ability to shoot, anywhere on the field.

d. Defensive foul in the Goal Zone

i. A defensive player may not foul an offensive player while he is in possession of the ball in the Goal Zone whether he is passing, shooting, or on the ground.

e. Intentional foul under two minutes in third period

i. Any intentional foul defined in Section 9.II by the offense or defense under two minutes in the third period will result in a penalty shot.

IV. Team Technical Foul – Results in a penalty shot and offense is awarded a throw in from the nearest Cross corner.

a. Defensive free clear interference

i. See Section 4.III

b. Too many players on the field

i. A team may not have more than 10 players on the field at any time

c. Illegal substitution

i. A player that is substituting into the game must wait until his teammate is completely out of the playing area to enter the field

d. Excessive, unnecessary team fouling

i. Multiple players from the same team that continuously foul to an extent that the official deems excessive.

e. Timeout with none remaining

i. A team may not call a timeout if they have none remaining

V. Personal Technical Foul I– Results in a penalty shot and offense is awarded a throw in from the nearest Cross corner.

Two personal technical fouls result in an ejection from the game

a. Malicious Act

i. Any intentional, unnecessary contact by a player towards another player

b. Delay of game

i. Any act such as kicking, punting, throwing, holding, or spiking of the ball that delays the game in any way can be deemed a delay of game by the official

ii. Any false injury intended to delay the game

iii. Arguing a call or rule with an official for an extended period of time

c. Unsportsmanlike conduct

- i. Verbal abuse from a player on or off the field towards another player, team, official, or spectator
- ii. Inappropriate body language directed towards another player, team, official, or spectator
- d. Taunting
 - i. Excessive celebration directed at an opponent
 - ii. Provoking or challenging another player, team, official, or spectator with insulting remarks
- e. Illegal slide tackle
 - i. Slide tackling is blocking or kicking the ball away from an opposing player with the ball at his feet.
 - ii. A player may only slide tackle another player from a 180-degree angle from directly in front of the person's vision.
 - iii. A player must make initial contact with the ball
- f. Excessive, unnecessary fouling
 - i. A single player that continuously fouls to an extent that the official deems excessive.

VI. Personal Technical Foul II – Results in immediate player ejection, two penalty shots, and throw in from nearest Cross corner

a. Excessive physical force

- i. Any intentional, unnecessary, excessive contact by a player towards another player, team, official, or spectator

b. Brute physical force

- i. Punch, elbow, slap, or any other brute physical force

c. Fighting

- i. Violent act of any nature between two or more players. All players involved will immediately be ejected. If ejections result in less than 8 players able to participate, the team with more players will be declared the winner by means of forfeit. If both teams have equal number of players and do not have 8 or more players eligible to play, the team with more points at the time of the ejections will be declared the winner.

d. Verbal abuse

- i. Excessive verbal abuse by a player towards another player, team, official, or spectator

e. Vile action

- i. Any vile action such as spitting on an opponent

Section 11 – Diagrams

a. Kronum Round – Dimensions

b. Kronum Round Zones

c. Scoring

- i. The points are counted depending from where the shot was taken:

1. Goal Zone = 1 point (Chamber), 2 points (Rings)
2. Wedge Zone = 2 points (Chamber), 4 points (Rings)
3. Flex Zone = 2 points (Chamber), 4 points (Rings)
4. Cross Zone / Second Ring = 4 points (Chamber), 8 points “Kronum” (Rings)
5. Penalty Shot = 3 points (Chamber), 6 points (Rings)

- ii. Those points are doubled if the player makes a Ring Shot instead of simply kicking or throwing the ball into the chamber (the goal under the rings). If the player makes a Ring Shot from the Prime Ring (for example), he scores 8 points (also known as a “Kronum”) for his team.

d. Prime Rush Alignment

PS4 leads Xbox One with stability (2014-04-05 03:51)

<http://www.nasdaq.com/article/video-game-sales-up-in-feb-software-sales-dismal-analyst-blog-cm335490>

The cheaper PS4 beat Xbox One this year. Remember, Xbox 360 had PS3 beat in sales. PS3 was more stable than Xbox 360 due to its FreeBSD firmware. I have seen rings of death on my 360s. It came down with firmware stability in November 2013 on which to choose. I knew this, because it says FreeBSD on PS3 credits. Americans are scrooge on their purchasing new consoles now-a-days as they buy up all second hand. People are burnt from Xbox 360s rings of death and firmware errors. Xbox One also had BD-ROM and software errors.

Fanboy Annoyance (2014-04-09 03:52)

Square peg for square hole

Before you can effectively annoy a fanboy, you must assess his/her state. This is partially dependent on the exact type of software the said person worships. For example, you cannot use the same strategy to bait Windows users and Mac users. Firefox fans require a different approach from those using Internet Explorer. GIMP is not equal to Photoshop. Nor should you mix separate categories of software either.

Your plan must be based on the target user base intelligence and skill, their socio-economic status, the recent comings and goings in the software news world, the popular and controversial topics running in the blogosphere, individual personalities of the key players involved, and finally, the fanboy you are facing. All combined, these factors should present you with the right formula for the most useful trolling.

Going through each and every category is probably boring and too cliché, but I will use this or that software to illustrate how certain attributes, so to speak, can be used to leverage - now, there's a corporate word - and enhance your fanboy electronic warfare.

Tip 1: Tell something that is mildly inaccurate

Say you tell a Mac user how their laptops cost 50 % more than a contemporary rival product running Windows. If the actual figure is only about 23 %, the fanboy will surely rush to correct you. This serves you on two levels. One, a normal person will not bother to address the slight inaccuracy of your statement, nor will they possibly be aware of the price ranges and differences unless they recently bought a laptop. Second, the fanboy will get angry by your blatant disregard of the marketing figures, which should serve your purpose. Target identified and acquired.

Step 2: Look for the weakness in the defenses

Now that you have their attention, it is time to tune up your offensive. You must not be too obvious. You must be subtle about it, as they could spot your intention, and then the game is lost. To get their sympathy and make them feel confident, agree with them on the price issue, or any other subject you may have used in the warmup phase, but then elaborate on something else that may be bothering you, only this time introduce a personal angle. For instance, complain how FireWire has been flaky for you on your Linux box. If the enemy agrees for some weird reason, find something else to complain about, like a USB printer or maybe an SD card or something alike. It should be a combined hardware-software component for best effect. The fanboys are likely to accuse you of having bad hardware or perhaps missing the right skills to debug such trivial issues.

Getting warmer: Get those spirits flying

At this point, it's time for a demo. Some things will be hard to demonstrate, others trivial. When planning your troll campaign, make sure you come ready and fully equipped for the task. Having some gadgets handy is always a good thing. With your adversary intrigued and mildly riled, you now need their interaction. Pretend to be clueless and demo something that has a simple and obvious solution, but which might indicate you are at fault and not the software. For example, you might want to complain about Firefox opening tabs right next to the active one and not placing them at the far right end as it used to be in the past. At this stage, you are letting your foe get cozy. You observe but do not attack yet. You wait.

Prototip 4: Oh, the sh!t just got real

Now, you step the drama one notch higher. Time for your second demo. This time, it should be a complex one, with multi-component interaction. For example, playing a media file that is both unassociated with your player of choice, as well as not having the right codecs for the task. Make sure you demo two or three times in a row, rapidly, ignoring any comments and suggestions. Complain most loudly how the software does not do what it is supposed to do. Don't let the fanboy take physical control of your asset just yet. Bait them for a few minutes before you relinquish control to their supposed assistance.

Level 5: Ceasefire

Let the fanboy defend their honor. You part ways. Now, google for your woe, whether real or simulated. Make sure you find at least a dozen references. Look for those that sound angry or desperate, go for unanswered forum and board topics. Try to single out those that seem to involve a whole range of unrelated problems, like people having hardware problems and yet complaining about the stability of their software and alike. Blue screens of death are always a favorite. But so are application traces and `/var/log/messages` errors in Linux.

The next time you meet the fanboy, complain how the problem is back and obliterate them with mail spam, pointing out to a million online horror stories that justify your frustration. Normal people will refer you to technical support, recommend you switch to an alternative program or just give up. Fanboys will take personal offense at your software issue. You should be highly emotional at this point and resistant to help. Make sure you point out how that program sucks at least twice in the conversation. Now, you go back to the comparison, and you tell glowing stories how the competition does it better and without any problems.

```
A problem has been detected and windows has been shut down to prevent damage
to your computer.
```

```
TRAP_CAUSE_UNKNOWN
```

```
If this is the first time you've seen this Stop error screen,
restart your computer. If this screen appears again, follow
these steps:
```

```
check to make sure any new hardware or software is properly installed.
If this is a new installation, ask your hardware or software manufacturer
for any windows updates you might need.
```

```
If problems continue, disable or remove any newly installed hardware
or software. Disable BIOS memory options such as caching or shadowing.
If you need to use Safe Mode to remove or disable components, restart
your computer, press F8 to select Advanced Startup options, and then
select Safe Mode.
```

```
Technical information:
```

```
*** STOP: 0x00000012 (0x00000000,0x00000000,0x00000000,0x00000000)
```

```
collecting data for crash dump ...
initializing disk for crash dump ...
beginning dump of physical memory.
dumping physical memory to disk: 60
```

Jedi bonus 6: Resistance is futile

If you've done your work well so far, the fanboy should be angry and fairly derailed. If not, go back to state three and try a different scenario. You must remember to be thorough and methodical. Anyhow, back to our strategy.

Every time you meet the fanboy, restart the conversation about your issue. Tell stories how you made some progress, but how at every next step you were hindered and hampered by a completely new problem that wasn't there before, and how it only further emphasizes your initial claim. Occasionally, resend online stories that point out the software failures. Ignore user incompetence and environmental issues. Now, you must also look for stories with a charged political theme that add spice to your work.

Not only do you bombard your foe with mails full of problems and misery, you fire at them with stories that mention conspiracies, the suppression of freedom, the community voice not being heard, the locking out of rivals, intellectual property, patents, the mass market exploitation, and so forth. Even if they are not quite related, dig for an angle that makes them relevant. For instance, always remind the Windows users that Microsoft stole DOS from someone, Linux is for communists and Mac is made in Chinese sweatshops. Google must not be trusted with your private data, all your Playstation is belong to Sony, how come you cannot run z/OS on it, what's up with that?

Secret ninja star 7: The power of Youtube

Believe it or not, videos are a hundred times more powerful for trolling than any amount of text. Because few people have the mental capacity to read long blog rants. But they will watch videos and get ultra-rage when faced with facts, true or not, that humiliate their favorite software. You should use a balanced mix of news snippets that seem reasonable as well as rants by USI-riddled people narrating to their camera about things they barely understand and yet feel arrogant enough to babble about. Nothing like a combination of some company's CTO speeches about the business practices of their chief rival and barely intelligible responses by 14-year-old boys pretending to be young techies. The videos should be lame, unfunny, annoying, badly choreographed. The message is less important, but if they can manage to strike a nerve, that's good too.

To find relevant material quickly, look for videos that have re: and response in their title plus the related software, the Latin word versus (or vs.) that indicates would-be comparison, mega-zoom face-in-the-camera litanies, and videos with a lot of dislike votes.

Nukelar weapon: Use with caution!

Now the best part. If you're really keen on annoying those fanboys, you should write your own personal blog entry, rant about it, curse, spit and foam, then disable comments or allow comments but never publish them. You should also use a blogging service that looks cheap. Your post should appear as if someone with a reduced mental quotient got hold of a secret keyboard and spilled their share of angst before being detected.

Then, send that to your fanboy victim to let them know your precious opinion is out there, refuting all the facts they gave you and re-emphasizing how right and correct and awesome you were in the first place. Again, normal people will disregard your oligophrenic piece of prose as a classic Internet turd, but the fanboys will take grudge forever. I've shared many a joyous moment reading various forums where even simple, obvious, blatant jokes made with the most lighthearted and benevolent intentions were greeted with so much hate and zeal that you really start wondering about the planet as a whole. Mac boards lead, I must admit.

so then i installed unubtu and tried to run explorer on it, but it threw an error. i mean wtf! i never had problems like these on windows. my computer just rebooted and i was downloading this softwaer to get the icons. all this talk about linux makng it big on desktop, forget it. never gonna happen. and this spying in kernel, what about that. this is bullcrap, im going back.

Conclusion

And that's all. This is the ultimate strategy that should help you get those fanboys worked up. It's like rough parenting. It's all for the better cause. Or some cause. Maybe. Either way, you win, which is the important thing here. Loving software is all nice and well, but there's a limit to how much enamored and emotionally attached you can be to a bunch of code.

Well, hopefully this blissful piece of article has taught you some useful tips that should bring you much rejoicing. Remember, you must exercise flexibility with your ideas and never falter, even when faced with ultimate zeal. It is important to innovate, have a backup plan ready, as well as be persistent and consistent in your trolling. Do not laugh, break down or show compassion. And you must never give up. It's all for the greater good. With your help, one day, we might live in the world where fanboyism is restricted to Star Wars versus Star Trek. Now, there's a tricky topic. Cheers.

Agenda 21 Communitarianism preventing photographing? (2014-04-09 14:03)

ave you wondered where these terms 'sustainability' and 'smart growth' and 'high density urban mixed use development' came from? Doesn't it seem like about 10 years ago you'd never heard of them and now everything seems to include these concepts? Is that just a coincidence? That every town and county and state and nation in the world would be changing their land use/planning codes and government policies to align themselves with...what?

First, before I get going, I want to say that yes, I know it's a small world and it takes a village and we're all one planet etc. I also know that we have a government of the people, by the people, and for the people, and that as cumbersome as that can be sometimes (Donald Rumsfeld said that the Chinese have it easy; they don't have to ask their people if they agree. And Bush Junior said that it would be great to have a dictator as long as he was the dictator), we have a three branch government and the Bill of Rights, Constitution, and self-determination. This is one of the reasons why people want to come to the US, right? We don't have Tiananmen Square here, generally speaking (yes, I remember Kent State—not the same, and yes, an outrage.) So I'm not against making certain issues a priority, such as mindful energy use, alternative energy sponsorship, recycling/reuse, and sensitivity to all living creatures.

Considering its policies are woven into all the General Plans of the cities and counties, it's important for people to know where these policies are coming from. While many people support the United Nations for its 'peacemaking' efforts, hardly anyone knows that they have very specific land use policies that they would like to see implemented in every city, county, state and nation. The specific plan is called United Nations Agenda 21 Sustainable Development, which has its basis in Communitarianism. By now, most Americans have heard of sustainable development but are largely unaware of Agenda 21.

In a nutshell, the plan calls for governments to take control of all land use and not leave any of the decision making in the hands of private property owners. It is assumed that people are not good stewards of their land and the government will do a better job if they are in control. Individual rights in general are to give way to the needs of communities as determined by the governing body. Moreover, people should be rounded up off the land and packed into human settlements, or islands of human habitation, close to employment centers and transportation. Another program, called the Wildlands Project spells out how most of the land is to be set aside for non-humans.

U.N. Agenda 21 cites the affluence of Americans as being a major problem which needs to be corrected. It calls for lowering the standard of living for Americans so that the people in poorer countries will have more, a redistribution of wealth. Although people around the world aspire to achieve the levels of prosperity we have in our country, and will risk their lives to get here, Americans are cast in a very negative light and need to be taken down to a condition closer to average in the world. Only then, they say, will there be social justice which is a cornerstone of the U.N. Agenda 21 plan.

Agenda 21 policies date back to the 70's but it got its real start in 1992 at the Earth Summit in Rio de Janeiro when President Bush signed onto it. Click [here](#) to see a list of the countries that signed UN Agenda 21. President Clinton took office the following year and created the President's Council on Sustainable Development to implement it in the United States. Made up of federal agencies, corporations, and non-profit groups, the President's Council on Sustain-

able Development moved quickly to ensure that all federal agencies would change their policies to comply with UN Agenda 21. A non-governmental organization called the International Council of Local Environmental Initiatives, ICLEI, is tasked with carrying out the goals of Agenda 21 worldwide. Remember: UN Agenda 21/Sustainable Development is a global plan that is implemented locally. Over 600 cities in the U.S. are members; our town joined in 2007. The costs are paid by taxpayers.

It's time that people educate themselves and read the document and related commentary. After that, get a copy of your city or county's General Plan and read it. You will find all sorts of policies that are nearly identical to those in U.N. Agenda 21. Unfortunately, their policies have advanced largely unnoticed and we are now in the end game. People need to identify their elected officials who are promoting the U.N.'s policies and hold them accountable for their actions. Only when we've identified who the people are and what they are trying to do will we be able to evaluate whether or not we approve of the policies they are putting forward. Some people may think it's appropriate for agencies outside the United States to set our policies and some people will not. The question is, aren't Americans able to develop their own policies? Should we rely on an organization that consists of member nations that have different forms of governments, most of which do not value individual rights as much as we do? It's time to bring U.N. Agenda 21 out in the open where we can have these debates and then set our own policies in accordance with our Constitution and Bill of Rights.

Ok, you say, interesting, but I don't see how that really affects me. Here are a few ways:

No matter where you live, I'll bet that there have been hundreds of condos built in the center of your town recently. Over the last ten years there has been a 'planning revolution' across the US. Your commercial, industrial, and multi-residential land was rezoned to 'mixed use.' Nearly everything that got approvals for development was designed the same way: ground floor retail with two stories of residential above. Mixed use. Very hard to finance for construction, and very hard to manage since it has to have a high density of people in order to justify the retail. A lot of it is empty and most of the ground floor retail is empty too. High bankruptcy rate.

So what? Most of your towns provided funding and/or infrastructure development for these private projects. They used Redevelopment Agency funds. Your money. Specifically, your property taxes. Notice how there's very little money in your General Funds now, and most of that is going to pay Police and Fire? Your street lights are off, your parks are shaggy, your roads are pot-holed, your hospitals are closing. The money that should be used for these things is diverted into the Redevelopment Agency. It's the only agency in government that can float a bond without a vote of the people. And they did that, and now you're paying off those bonds for the next 45 years with your property taxes. Did you know that? And by the way, even if Redevelopment is ended, as in California, they still have to pay off existing debt—for 30 to 45 years.

So, what does this have to do with Agenda 21?

Redevelopment is a tool used to further the Agenda 21 vision of remaking America's cities. With redevelopment, cities have the right to take property by eminent domain—against the will of the property owner, and give it or sell it to a private developer. By declaring an area of town 'blighted' (and in some cities over 90 % of the city area has been declared blighted) the property taxes in that area can be diverted away from the General Fund. This constriction of available funds is impoverishing the cities, forcing them to offer less and less services, and reducing your standard of living. They'll be telling you that it's better, however, since they've put in nice street lights and colored paving. The money gets redirected into the Redevelopment Agency and handed out to favored developers building low income housing and mixed use. Smart Growth. Cities have had thousands of condos built in the redevelopment areas and are telling you that you are terrible for wanting your own yard, for wanting privacy, for not wanting to be dictated to by a Condo Homeowner's Association Board, for being anti-social, for not going along to get along, for not moving into a cramped apartment downtown where they can use your property taxes for paying off that huge bond debt. But it's not working, and you don't want to move in there. So they have to make you. Read on.

Human habitation, as it is referred to now, is restricted to lands within the Urban Growth Boundaries of the city. Only certain building designs are permitted. Rural property is more and more restricted in what uses can be on it. Although counties say that they support agricultural uses, eating locally produced food, farmer's markets, etc, in fact there are so many regulations restricting water and land use (there are scenic corridors, inland rural corridors, baylands corridors, area plans, specific plans, redevelopment plans, huge fees, fines) that farmers are losing their lands altogether. County roads are not being paved. The push is for people to get off of the land, become more dependent, come into

the cities. To get out of the suburbs and into the cities. Out of their private homes and into condos. Out of their private cars and onto their bikes.

Bikes. What does that have to do with it? I like to ride my bike and so do you. So what? Bicycle advocacy groups are very powerful now. Advocacy. A fancy word for lobbying, influencing, and maybe strong-arming the public and politicians. What's the connection with bike groups? National groups such as Complete Streets, Thunderhead Alliance, and others, have training programs teaching their members how to pressure for redevelopment, and training candidates for office. It's not just about bike lanes, it's about remaking cities and rural areas to the 'sustainable model'. High density urban development without parking for cars is the goal. This means that whole towns need to be demolished and rebuilt in the image of sustainable development. Bike groups are being used as the 'shock troops' for this plan. What plan? We're losing our homes since this recession/depression began, and many of us could never afford those homes to begin with. We got cheap money, used whatever we had to squeak into those homes, and now some of us lost them. We were lured, indebted, and sunk. Whole neighborhoods are empty in some places. Some are being bulldozed. Cities cannot afford to extend services outside of their core areas. Slowly, people will not be able to afford single family homes. Will not be able to afford private cars. Will be more dependent. More restricted. More easily watched and monitored.

This plan is a whole life plan. It involves the educational system, the energy market, the transportation system, the governmental system, the health care system, food production, and more. The plan is to restrict your choices, limit your funds, narrow your freedoms, and take away your voice. One of the ways is by using the Delphi Technique to 'manufacture consensus.' Another is to infiltrate community groups or actually start neighborhood associations with hand-picked 'leaders'. Another is to groom and train future candidates for local offices. Another is to sponsor non-governmental groups that go into schools and train children. Another is to offer federal and private grants and funding for city programs that further the agenda. Another is to educate a new generation of land use planners to require New Urbanism. Another is to convert factories to other uses, introduce energy measures that penalize manufacturing, and set energy consumption goals to pre-1985 levels. Another is to allow unregulated immigration in order to lower standards of living and drain local resources.

bad gaming habits (2014-04-16 00:02)

1) Hoarding.

Of all the bad habits I have in gaming, this one is definitely the most wide spread. It's odd, because in real life I'm not very tied to material objects. I collected comics and comic cards as a kid, but it wasn't sustained in to adulthood. The only thing I really have a lot of is video games and consoles, and even that isn't a substantial collection. It's probably small enough to fit in to a duffle bag.

Not my Skyrim home, but might as well be.

When it comes to playing video games, however, it's a completely different story. I didn't realize I had a problem until I played Skyrim. One day I was cleaning out the inventory in my Whiterun home, and all of the sudden it hit me: I have over 800 cabbages in my cupboard. I sat there for a brief moment as that fact sunk in, and I only had one thought... "What in sake am I

going to do with 800 cabbages?"

Of course that was just the beginning. My eyes had been opened, and I began to notice that I've hoarded all sorts of stuff in other games. Specialty ammunition in my favorite shooters. Piles of money/resources in just about every game I've played. So many pilot lights in Fallout 3... I've since gotten better about this, but it's actually taken some work. I re-trained myself to be more discerning, and to remember that just because a rusty can exists as an item in this game doesn't mean I need to pick it up. Learn from my mistakes, folks. Don't burden your inventories with items you'll never use, and don't save all your resources for a crazy last stand that probably won't come. Go all out, and enjoy the game to it's fullest!

2) Never Looking Up.

One of the best things about gaming is that feeling you get when you come across something that is out-of-this-world beautiful. A great example is in Halo when you first land on the ring and see it stretch off in to the background and all the way up over your head. Or that first sunrise that you catch as you're galloping across the wild west in Red Dead Redemption. Or the sheer scope of fighting Poseidon in God of War 3. These are beautiful things that are hand crafted by developers with love, in hopes that gamers will see them and lose themselves in the pure beauty and spectacle.

✕

3) Rushing In.

✕

I probably should have thought this through.

When I play co-op, I tend to play more like... well, an Instead of using the 2nd person to our advantage and playing like a competent adult, I tend to do something that's significantly less helpful and more likely to get us killed: I charge in head on. Ok, I don't do this ALL the time, but enough that I've noticed it's a pattern. Anyone who has played most FPS games on the hardest difficulty knows that's a pretty quick way to get yourself killed, yet I find it very hard to stop myself. As my teammate hangs back and smartly whittles down the enemies ranks, I'm over here shouting some war cry straight out of Lord of the Rings as I try to punch everything to death. But honestly, what's a guy supposed to do when the beacons are lit and the red dawn approaches? Sigh... I'm not proud of it, but I gotta own up to it. I'm lucky I have patient

friends. Here's to all the teammates who died while I was in spectator mode. *pours a little on the sidewalk*

4) Constantly Reloading.

Imagine this if you will. It's a heated game of versus mode in Left 4 Dead 2. My friends and I are trudging through The Dark Carnival campaign, making pretty good time. As I mow down a couple zombies with my AK-47, I instinctively hit the reload button even though I've only shot a few rounds. Then I hear it: the sound of a Charger as he tackles one of my teammates and knocks me on my back. I'm the closest one to him, and as I get to my feet, I pull the trigger only to watch in horror as my character has to restart the reload animation. My teammate's precious life ticks away, and soon we're overrun trying to pick him up off the ground.

Guilty as charged.

If you play lots of shooters, you may have picked up this bad habit along the way. Sure, reloading your gun when you've still got nearly all of the clip left probably doesn't come back to hurt you 99 % of the time. Trust me though, if you play with this bad habit long enough, sooner or later it'll come back to haunt you. You'll be left to watch helplessly as a teammate is pummeled before your very eyes. You'll wake up one night in a cold sweat as the sound of them screaming over the mic "WHY WON'T YOU HELP ME" is still ringing through your head. *shiver*

5) Button Mashing.

Of all the bad habits I have in gaming, this is probably the most serious offender. Look, I've been playing games for a long time and I'm proud that at the very least, I've given every game genre a try. I've enjoyed some genre's more than others (RPG, RTS, Shooters, Adventure, etc), but there are some that I simply can't seem to master. At the top of that list, without a shadow of a doubt, is fighting games. Not arena fighters like Super Smash Bros., but games like Street Fighter, Tekken, Marvel vs. Capcom and the like. And the reason for this is because... my hand eye coordination is atrocious. Scratch that, just my coordination in general. It's why I was a runner in High School and not a... well, any other kind of athlete. I'm not bothered by this fact, but it's the truth.

Erm... Yeah, I'm just gonna keep slamming the buttons with my fist.

It's also why, even after 25 years of playing video games, I still mash buttons. I know, it's terrible, but I just can't do those tricky combos everyone else can do in their sleep. T\

Top 10 JRPG games that are not FF (2014-04-16 06:21)

- 5. Tactics Ogre: Let Us Cling Together & Ogre Battle 64
- 14. Skies of Arcadia
- 13. Chrono Cross
- 12. Pokemon Crystal
- 11. Grandia

✕ 10. Dragon Quest VIII: in my opinion, the game has an average story and good gameplay. Sometimes the gameplay is the part which shines the most, usually when you need to be very strategic in hard boss battles. but the best part of this game is the large amount of side quests | meta-critic 7 user rating: 89,84

✕ 9. Disgaea: Hour of Darkness: a very addictive turn based rpg where you move characters from place to place, it has a lot of replay value and many side quests | meta-critic & user rating: 84,87

✕ 8. Secret of Mana: In my opinion, this is the game which is the blue print for modern day action rpg's like Kingdom Hearts. It also has a highly addicting battle system and reminds me a lot of the shining force series | Gamerankings: 86.5 %

✕ 7. Dark Cloud 2 (Dark Chronicles): This game is the Legend of Zelda of the playstation. It has a very similar lock on system to LoZ, tons of side quests, a sim style mini game where you can build your own towns and a secret hard dungeon at the end to give it a lot of re playability | meta-critic & user rating:87,92

✕ 6. Shadow Hearts 1 or 2: Shadow Hearts 1 is scarier, its one of the best horror themed RPG's I played. It had an interesting ring based battle system which was quite fun. I miss this series. The company that made it is now defunct | Metacritic-critic & user rating:85,91 (Shadow Hearts 2)

✕ 5. Suikoden 1 or 2: good story about geopolitics, conquest and war. Although the game had 2d graphics which kind of let it down. But it didnt stop me from enjoying the game | Metacritic-critic & user rating:82,98

✕ 4. Tales of Symphonia: my first tales game, highly addictive battle system, quite of number of side quests and very difficult optional bosses. The story was average and was quite cliché | metacritic-critic & user rating:86,90

✕ 3. Xenogears: the game is full of robotic battles and customization. The game itself is constructed in the traditional turn-based RPG style but with several innovative features that make it stand miles apart from its predecessors. The combat system utilizes some of the same aspects of a typical Square game by incorporating the Active Time Gauge system. In my previous list, I somehow forgot about this game | Meta-critic & user rating:84,94

✕ 2. Persona 4 & Kingdom Hearts: these 2 games are tied at number 2. Persona 4: the gameplay is ok & much better in the hard mode of the game. But what stood out is the amazing story, it has quite a lot of plot twists. I have not seen a JRPG with plot twists as good as this game | Meta-critic & user rating:90,91

✕ 2. Kingdom Hearts 1: also tied for number 2. What i loved most about this game is the gameplay & difficult secret bosses, this game should not be judged based on face value. Just because it has Disney characters in it, does not mean its an easy or rubbish game | Meta-critic & user rating:85,89

✕ 1. Chrono Trigger: epic and addicting battle system, excellent story, just 1 optional boss in the original, I wanted more. The music in the game isn't better than FF 6, 7, 9 or 10. Never the less this game is a master piece | Gamerankings (snes):95.1 %

state capitalism (2014-04-17 01:47)

The French economist Thomas Piketty has achieved worldwide fame by promoting a thesis that capitalism is the cause of growing economic inequality. Unfortunately, he is partially right. However, the important distinction missed by Piketty and all of his supporters is that state capitalism, not free market capitalism, has reigned supreme in recent decades in the world's leading democracies. It is this misguided attempt to wed the power of the state to the private ownership of capital that has led to the mushrooming of economic inequality. If the public cannot be made aware of the distinction, we risk abandoning the only system capable of creating real improvements for the vast majority of people.

In his book entitled 'Capital in the 21st Century', Piketty, like Karl Marx in 'Das Kapital,' places the hinge of economic tension at the supposed opposition between the competing interest of labor and capital. He believes that "capitalism automatically generates arbitrary and unsustainable inequalities that radically undermine the meritocratic values on which democratic societies are based." However, this can only become true if free markets become controlled, or distorted, by the establishment of monopolies, be they private or state owned.

In the early twentieth century, U.S. Governments were alert to the destruction of free markets by monopolistic cartels and enacted strong anti-trust laws to curb their power. The United States thereafter achieved strong economic results in the first three decades of the 20th Century. In contrast, the socialist governments of post WWII Britain used public funds to establish state owned monopolies, similar to those existing in the Soviet Union. This resulted in dramatic economic declines, that continued into the 1980s when the U.K. was rescued by the free market policies of Margaret Thatcher. Her central strategy was to restore individual freedom by breaking state owned monopolies and reducing the coercive control of trade unions. Her actions unleashed a resurgence of prosperity in Britain that was imitated in many other countries. Her policies were adopted with particular enthusiasm by countries, like Poland, which had only recently shaken off the yoke of Soviet Communism. Poland is now one of the strongest economies in Europe. History provides ample evidence that when allowed to function properly free market capitalism generates massive national prosperity with high employment, a strong currency and rising standards of living. It is only when the state manipulates and over regulates free markets that capitalism fails. However, capitalism usually takes the blame for the failures of statism.

Piketty asserts that capitalism is "inherently unstable because it concentrates wealth and income progressively over time, leaving behind an impoverished majority. ..." He proscribes even an international wealth tax and higher income taxes, above 80 percent, to redistribute rather than to invest savings. This would essentially create a state monopoly on wealth. But again, history tends to demonstrate that state monopolies create poverty for all but the politically connected elite.

Even the Soviet Union, a military superpower, was brought to its economic knees by state monopolies. Communist Party Secretaries, Andropov and Gorbachev, were forced to the recognition that free markets should be introduced within Russia. This led to 'Perestroika' and 'Glasnost' and the freeing of markets in Russia.

By concluding that capitalism, even if it is confined to just a few countries, will lead to increasing poverty among the masses around the world, many cynical observers may conclude that Piketty is laying out a carefully planned case towards global socialism along the lines first attempted by the Bolshevik Comintern. Some conclude that such a move could be spearheaded by international institutions like the UN and IMF.

To achieve inherently unpopular global power, national elites must cooperate to bring about such levels of economic chaos and human suffering that people, despairing of ineffective democracy, will look for strong, global government as a welcome solution. To achieve this end the economic problems and human suffering must be extreme and seemingly beyond solution by any national government. By continuing to debase and destroy fiat currencies while preventing the markets from healing themselves, central banks around the world are doing their part to create these conditions. However, those who look towards strong global government must realize that likely it will lead to a world of extreme global inequality in which any effective opposition will be impossible. This is the fascistic face behind the cuddly and concerned image that has made Piketty the economic North Star of a new generation. These faulty bearings must be corrected or the world's poor will suffer far more than they need to.

Top 10 JRPG games, back when JRPG's used to be Awesome (2014-04-17 06:17)

Honourable mentions:

12. Secret of Mana

11. Dark Cloud 1 & 2

✖ 10. Shadow Hearts 1 or 2: Shadow Hearts 1 is scarier, its one of the best horror themed RPG's I played. It had an interesting ring based battle system which was quite fun. I miss this series. The company that made it is now defunct | Metacritic-critic & user rating:85,91 (Shadow Hearts 2)

✖ 9. Suikoden 1 or 2: good story about geopolitics, conquest and war. Although the game had 2d graphics which kind of let it down. But it didnt stop me from enjoying the game | Metacritic-critic & user rating:82,98

✖ 8. Tales of Symphonia: my first tales game, highly addictive battle system, quite of number of side quests and very difficult optional bosses. The story was average and was quite cliché | metacritic-critic & user rating:86,90

✖ 7. Chrono Trigger: epic and addicting battle system, excellent story, just 1 optional boss in the original, I wanted more. The music in the game isn't better than FF 6, 7, 9 or 10 | Gamerankings (snes):95.1 %

✖ 6. Final Fantasy IX: has the magic FF formula that always works=good turn based atb gameplay + mini games + hard secret bosses + epic stories=WIN, Square Enix seems to have forgotten this formula. Maybe if they played this game they would go "oh damn, thats why our games used to be great" | Metacritic-critic & user rating:94,91

✖ 5. Persona 4: the gameplay is ok & much better in the hard mode of the game. But what stood out is the amazing story, it has quite a lot of plot twists. I have not seen a JRPG with plot twists as good as this game | Meta-critic & user rating:90,91

✖ 4. Final Fantasy 6: this game possibly has the best story of all the FF games. I didnt think it was as good as FF7 or FF10 though, because it didnt have that many mini games, hard bosses (except the dragons, czar dragon was missing which was a shame) and this game has a few serious bugs. If you used the "sketch" ability it could potentially crash the game depending on who you used it on, and what their status effects was when you used it | Meta-critic & user rating:92,94 (gba ver)

✖ 3. Kingdom Hearts 1: what i loved most about this game is the gameplay & difficult secret bosses, this game should not be judged based on face value. Just because it has Disney characters in it, does not mean its an easy or rubbish game | Meta-critic & user rating:85,89

✖ 2. Final Fantasy VII: everything about this game is "cool", when I first played this, it was 1 or 2 years after the PS2 came out, the graphics did not put me off. The game has a deep story, excellent gameplay, mouth watering CGI (for its time) and bad ass characters | Meta-critic & user rating:92,89

✖ 1. Final Fantasy X: This was my first FF & JRPG, so there maybe some bias here. But even then you can't deny that FF 10 is an epic game with an excellent story, wide variety of customization and beautiful cut scenes. Not to forget the excellent emotion extracting music. Just listen to 1 tune below. If only Square Enix made FF games like FF10 and those before it again...but we know that will probably never happen | Meta-critic & user rating:92,87. This is 1 of many awesome tunes from FF10: <http://www.youtube.com/watch?v=1xRCjjiTR7I>

forgotten books (2014-04-17 15:51)

I found a website that scans old books and resells them on Amazon for \$10. A lot of the scanned books have free PDFs. All have a free preview.

<http://www.forgottenbooks.org/>

2014 in game industry (2014-04-19 14:01)

Combined Annualized U.S. Console Hardware Sales

Ask me again after the PS4 sells 100 mil. But M \$ and Nintendo home console gaming is slowly but surely dying, yes. down with consoles, long live arcades!

ditor's note: Since 2005, Blake Snow has covered video games and other male-interest topics for some of the biggest names in journalism. He lives in Utah with his family and is currently writing a book about finding offline balance in an online world.

(CNN) – If console gaming were a first-person shooter, it would be taking heavy fire right now. A red hue would envelop the viewable screen from all sides, an ominous sign of spilled blood.

Or worse, near-death.

Despite this, Nintendo will release its new Wii U console on November 18, ushering in the eighth and possibly last generation of traditional home consoles as we know them.

Consider this: Dedicated gaming sales — including living-room consoles and handhelds — are in the midst of a four-year tailspin. You might say that's because of a bad economy, but then you'd have to explain why movie revenue and cable TV subscriptions have largely stayed the same.

Or why music sales, gutted by online streaming and piracy, have held up better than slumping sales of console games. Or why the popularity of social, mobile and PC games have skyrocketed to unthinkable heights.

Hands on with the next Nintendo Wii

The problem seems to be isolated to dedicated video games. Video game industry sales in the United States, including game discs, consoles and accessories, were down 24 % in September when compared with the same period last year. Many experts believe these decreases in profits, the rise of casual and social gaming and waning consumer interest are affecting makers of the three big living-room consoles: Microsoft's Xbox 360, Sony's PlayStation 3 and Nintendo's Wii.

So is this it then? Is the death of dedicated gaming upon us? In a word, no.

"I bristle when people suggest as much," says Adrian Crook, a game design consultant. "Consoles will grow again and will never go away."

But today's dedicated gaming business is arguably in its most tumultuous period since the 1983 gaming collapse. It's nowhere near ruin yet, thanks to big franchises like "Call of Duty," "Madden," and a select few mainstream console games. But the console's influence is waning, and there's uncertainty about its future.

Here's where the shots at console gaming are coming from, and how the industry might dodge and counter them.

Trojan horses

Since the '80s, console makers have dreamed of using their "dedicated gaming machines" as Trojan horses to further control the living room with a single, proprietary device.

That time has come. Gaming consoles have transformed into entertainment hubs for people to stream movies or YouTube videos. So much, in fact, that gaming consoles no longer are being used primarily for gaming. In fact, "40 % of all Xbox activity now is non-game," Microsoft boasts. Amazon and Netflix streaming accounts for most of that, as they do for Wii and PS3.

Combined, game consoles account for half of all Netflix users. This is great news for the movie industry. Not so great for console gaming's bottom line, especially since the industry largely subsidizes consoles now.

I'd sooner pay nothing up front and \$5 to \$10 later than plunk down \$60 on a game and hope I like it.

Adrian Crook, game design consultant

In other words, a console isn't helping the gaming industry if it's mainly being used to stream Netflix movies.

Not only that, but gamers' tastes have evolved to include quick, bite-size gaming sessions – something consoles have never been good at. (Gamers must go to the living room, wait for the console to power on, load the game from the main menu, wait for it to boot.) It's much slower than tapping an icon on the smartphone you already carry in your pocket.

"Most people who liked console games in the past still do today," says Alex Hutchinson, creative director of Ubisoft, "but they're also looking for a wider spread of experiences. I want some games I can play quickly after work or while the kids are asleep and have a short satisfying experience."

As the number of gaming scenarios has increased, so, too, has the number of diehard gamers, says market researcher DFC Intelligence.

"Gamers have not only increased in number, but they are playing on multiple platforms now," says analyst David Cole.

"Fewer enthusiasts describe themselves in a single camp such as 'I love Nintendo and hate Sony and Microsoft' or vice versa."

If enthusiasm for a single dedicated machine has waned, however — or at least has been spread thin — then the machine that demands the most attention will invariably suffer. That machine is the console — the one you hold dear to your heart, but probably reach for less than you used to, whether you like to admit it or not.

Creative stagnation?

When it's not taking a backseat to more convenient app gaming, some say the console has stagnated creatively.

"You would think that XBLA (Xbox Live Arcade), PSN (PlayStation Network), and the rise of 'free to play' would have opened a door to smaller games that can take more risks creatively, but right now they're just cut-down versions of box-product games, or retreads of games I played on the SNES (Super Nintendo Entertainment System)," says Hutchinson, referring to the online gaming networks offered by Microsoft and Sony.

"I don't honestly think that someone who didn't want a 2-D platformer 20 years ago is going to wake up today and buy it on XBLA."

We need to offer more experiences that are understandable to people's real lives.

Alex Hutchinson of Ubisoft

In addition, even big-box games have lost some of their visual allure in recent years. What were once graphical leaps in previous generations have now become bunny hops, at least to the average eye.

"People aren't as motivated by cutting-edge graphics as they once were," says Paul Neurath, creative director at Zynga, makers of "FarmVille," "Mafia Wars" and other social games on Facebook.

"Gamers that care intensely about graphics will continue to do so, but I think there are fewer now than there were in the past," he says. "Big leaps in graphics no longer exist. Unless there's some futuristic holographic display or direct brain implement we don't know about, it's hard to get a lot better."

Cole, the gaming analyst, agrees.

"Cutting-edge graphics in the past amounted to nothing more than killer CGI videos that added nothing to gameplay," he said. "That's a problem for an industry that up until recently prided itself on 'buy this console because the games look a lot better than the ones you currently own.'"

In that sense, next-generation is no longer "next." We've arrived. Looking back, NES was certainly a step above Atari and imprecise joysticks. SNES and Genesis offered a huge leap in affordable home graphics. PlayStation and N64 immersed players into 3-D worlds replete with camera control. PlayStation 2 and Xbox overcame polygons in favor of rounded and non-jaggy looks. All of these were improvements upon previous generations of gaming systems.

But this current generation of consoles? With the exception of the early Wii years, they've largely offered better-looking versions of games we've already played. There have been a lot of great games to be sure, but fewer must-haves — the kind that truly take the medium into uncharted territory.

Rise of cheap, social gaming

On the other hand, cheap, bite-size games such as "Angry Birds" and "Plants vs. Zombies" have thrived in recent years, ensnaring new players with novel gameplay.

"Virtually all of my clients are in social and mobile sectors, which have totally exploded in the last few years and continue unabated today," says Crook, who previously worked as a console designer.

As such, the demand for games has grown. "It's not so much that gamer interests have changed since the last generation, but that a whole group of new players have started playing games," says Zynga's Neurath. "These people would never have played last-generation console games. They're more into it for the social aspect."

Console makers so far have been ill-equipped to meet this demand, given their lucrative, 30-year-old model of selling games for \$50- \$60.

The Wii U's handheld controller displays a game during a presentation by developers Ubisoft.

The Wii U's handheld controller displays a game during a presentation by developers Ubisoft.

This partly explains why Nintendo, after five years of phenomenal Wii growth, is slumping. Industry experts say they're not in a position to meet the demands of most new social gamers.

We'll soon find out whether the Wii U can revive Nintendo's fortunes. The console's big new feature is a 6.2-inch touchscreen GamePad controller that interacts in creative new ways with the gamers' TV. Wii U players can play together, with one person using a TV screen and the other using the GamePad. A single player also can access additional

content on the GamePad that enhances the game on the big screen.

Nintendo declined to comment for this story.

In a struggling economy, consoles also have fallen victim to the cut-rate pricing of games – something consumers are exceedingly demanding but consoles have yet to offer.

In what has become a successful business model, many developers give away their games for free, then charge players later for status upgrades or gameplay perks.

"Say what you want about freemium, 'nickel and diming' of players, but I'd sooner pay nothing up front and \$5 to \$10 later than plunk down \$60 on a game and hope I like it," says Crook.

Ubisoft's Hutchinson refers to it as a rising "fear" among console gamers. With so many deals to be had elsewhere, a lot of console gamers are making fewer full-price purchases than before.

"The free-to-play model has certainly impacted the industry," agrees Zynga's Neurath.

On top of that, 99¢ iPhone and iPad games are also taking a toll on the perceived value of dedicated gaming systems. Even PC games go on sale for as little as \$5- \$20 on occasion, a trend that has breathed new life into PC gaming and changed how some of the most ardent gamers value games.

"The business model for a five-year life cycle isn't working for Sony and Microsoft," says Cole. "They spend billions to R &D and market these new systems, they sell them at a loss for the first few years and then they don't really have the software business to make up the cost. They are better getting out of the business entirely rather than go after a five-year life cycle."

How console makers can fight back

In wake of all these changes, what's a console maker to do? What might reinvigorate interest in living-room and dedicated handheld gaming?

A first step would be fresher consoles themselves. The Xbox 360 is 7 years old, while the Wii and the PlayStation 3 are both 6.

Newer motion-controlled gaming systems such as Microsoft's Kinect and Sony's Move, which let players control in-game avatars by moving their arms and legs, have helped sustain interest. But experts say more upgrades are needed.

"New consoles would help, and the rumblings have already started at Microsoft and Sony," Hutchinson says. As if reminded by the lackluster sales of the handheld 3DS and PS Vita gaming systems, he adds, "But I don't know that we really need a new hardware cycle at this point from a creative standpoint."

Zynga's Neurath, who's worked with consoles and PCs since the 8-bit days, says console makers would do well to act more like nontraditional platforms. A new console dubbed Ouya will launch next year with free-to-play games and a \$99 launch price, but keep the focus on what its manufacturer calls "TV gaming."

Crook believes there is still plenty of time for traditional console makers to correct their downward trend.

"There will always be a big market for core game systems," he says. "It all comes down to how consoles can get back to taking creative risks again, and what the platforms can do to broaden their markets and offer innovative means of interaction."

Ubisoft's Hutchinson wants console games to deliver more meaningful experiences.

"Games need to explain to players why they made certain artistic decisions, what mood they're setting with their lighting and color choices, and less about the technical features," he says. "We need to offer more experiences that are understandable to people's real lives, either in terms of mechanics or narrative, and attract people who don't read fantasy novels or watch the SyFy channel. Our mechanics are often not the barrier, but our content sometimes is."

The good news for the industry, and for gamers, is that video games in their broadest sense are most definitely here to stay. It's just that the way we access, control and define them has rapidly evolved. Despite the weakening sales of consoles and console games, the growth of mobile, social and PC-based games means that total spending on gaming is actually on the rise.

"Inviting more people to the fun and wonderment of games isn't just good for social games, it's good for the entire industry," says Neurath.

It will likely take at least one more console cycle to gauge the long-term sustainability of dedicated gaming devices, experts say. Their ultimate survival all depends on how well console makers adapt to evolving business models and changing consumer tastes.

Horrible truth: Beef up your PS Network profile for job (2014-04-30 11:48)

The horrible truth is now mainstream true [for Gamer Bachelor Degrees]! You have to beef up your Playstation Network profile with tons of trophies before you can HOPE to be hired as a videogame tester/developer/programmer.. A game design education is nothing without a portfolio to show employers - Neil Druckmann, Jesse Schell and Albert Shih weigh in

Games education continues to grow and evolve, as described in our last panel of video game professors, but what should students aim to get out of their education? How will they know if they're being molded into suitable candidates to be hired by leading game developers, or should they attempt going indie and starting their own studio?

GamesIndustry International tackles these questions and more in our panel below, assembled with the help of the Carnee Mellon Entertainment Technology Center (ETC), including the dev running it, an alum made good, and a current student. Our participants are Jesse Schell, CEO of Schell Games and professor at Carnee Mellon University's ETC, Neil Druckmann (creative director on Naughty Dog's The Last of Us and Carnee Mellon alum), and Albert Shih, current ETC student and designer on the student team making the museum of simulation tech.

: What do you think students should be getting from their education before they enter the games industry, and are they actually getting what they need today from most programs?

Jesse Schell: In my opinion, at a minimum, they should be getting a solid basis in craft, whether that be software engineering, fine arts, design, business, or what have you. Ideally, they are also learning interdisciplinary teamwork, since that is generally central to game development. In most cases, though, teamwork is neglected in undergraduate education.

"having solid technical skills and having a good portfolio is a huge concern for students"

Albert Shih

Albert Shih: I agree with Jesse that having solid technical skills and having a good portfolio is a huge concern for students. I also think a big part of a game-based education is giving students a bit of direction in stepping into the game industry. It's hard to find out what you don't know, and a lot of students have the drive and passion to enter the game industry but are not quite sure how to get there.

In my opinion, getting into the game industry from the outside is a bit tricky - there are a lot of options but most companies look for very specific skills. Knowing which skills or portfolio pieces are worth spending time on is a difficult problem. Fortunately, a lot of programs help students gain a lot more visibility in the industry.

Neil Druckmann: First thing is that students need to figure out where their passions lie and focus on specializing. The game industry is very competitive, especially for students coming out of school, and a good candidate needs to demonstrate deep knowledge in a specific discipline. Having said that, the most successful leaders in our company tend to have a broad knowledge of many topics. This is important because a big part of game development involves collaboration between a myriad of disciplines. A good developer can understand the different needs of a programmer, sound engineer, designer, animator, etc., irrespective of their own specialty. It's also important to note that even if you specialize in one area, it doesn't mean that you can never transition into another area later in your career. I started out as a programmer, then shifted to design, started doing some writing, and currently I'm a creative director. I always followed my passion and that helped me do my best work.

: The games industry - like any technological industry - changes quite quickly. Should we be concerned that students may spend four years learning stuff that could be out of date when they graduate?

Albert Shih: As a student, I'm not too worried about learning things that will be out of date. Game programs I know usually don't focus on any single replaceable technology. For example, in our Building Virtual Worlds class we switch technology (Kinect, Oculus, Leap Motion) every two to three weeks to teach students to be adaptable.

Jesse Schell: Absolutely, this is a concern. There are programs that unwisely spend all their time teaching students the details of technologies that are soon to be obsolete. It is very important for any responsible program to do two things - teach students that which is eternal, and to get them working in the media of the future.

Neil Druckmann: As Jesse mentioned, this definitely can be a concern - the more technical a role is, the more concern applies. A candidate that only works with a specific set of tools that a company doesn't use becomes a greater hiring risk - which could tip the scales for another candidate. That's why it's more important to focus on core foundational skills instead of figuring out the best shortcuts of a particular software package (although that's important too).

A few examples: when hiring a concept artist, we're more interested in seeing their understanding of drawing fundamentals (anatomy, perspective, use of shape & color, composition, rendering, etc.) rather than how well they use Photoshop. For level designers, we want to see their understanding of building a space (in whatever package they want) rather than how well they use Maya (a popular 3D modeling program). A character artist though, better have a deep understanding of the latest shaders that'll help push realistic skin and hair - for that role technical ability is just as important as artistic talent.

"Honestly, students are too well prepared for crunch. Crunch happens due to poor planning, and most students do not excel at planning, and are very used to burning the midnight oil to get their projects completed"

Jesse Schell

What I loved about Jesse's design class is that it never focused on technology. Instead we learned design fundamentals by creating and iterating on paper and board games. Those same principles are directly applicable in my day-to-day work on AAA titles (even though our engines and the tools change and evolve on a regular basis.)

: Crunch is very much a reality of the AAA games business still. Are students adequately prepared?

Albert Shih: I think most students from game programs are quite familiar with crunch. At the ETC (and from what I hear, Dipen) staying late and getting only a few hours of sleep is common, if not expected, for some of the classes or projects that the students need to take. However, I think a more valuable [skill] is to be extremely productive in a short amount of time. If you can only work on game development for 6 hours a day (as some indies do), you need to be super efficient.

Jesse Schell: Honestly, students are too well prepared for crunch. Crunch happens due to poor planning, and most students do not excel at planning, and are very used to burning the midnight oil to get their projects completed. It is my hope that as time goes on, more schools will start to teach responsible techniques for project management that avoid long-term crunch.

Albert Shih: It's funny that I've never seen it this way, but that's absolutely true. Students crunch a lot because of poor planning. Often it's even a badge of honor to have worked overnight and students who go home early are thought of as lazy or unproductive. I think getting enough sleep and good long-term planning are more important in the long run.

Neil Druckmann: It probably depends on the school, but the hardest I ever crunched was in my first year at the ETC at Carnegie Mellon. I think I stayed up for two days straight trying to finish a project for our Building Virtual Worlds class. While I don't see crunch going away, it's important for developers (especially newcomers that feel they have to prove themselves) to find balance in their lives. Without that balance you run the risk of not only creating sub-par work due to exhaustion, but also of burning yourself out and losing the passion that made you pursue this career in the first place.

: How has the rise of the indie scene in recent years affected how game design programs are structured? What changes have been made or do you think need to be made?

Albert Shih: I'm quite unfamiliar with how game design programs were in the past, but it seems that more and more students are less interested in large AAA projects and are more leaning towards creating indie or mobile projects.

Jesse Schell: It has made things far easier. We presently are in a period where students have access to the same tools that professionals do - this was not true 7 or 8 years ago. However, it has become more necessary for schools to teach about business realities, as the idea of a student finishing school and trying to make it as an indie dev has become a reality.

Albert Shih: We still haven't seen a lot of examples of students directly transitioning into indie devs, so I'm slightly worried on that front. However, it's true that there have been a lot of examples of hit indie games being made in rather approachable tools. Game Maker was used to make Spelunky, Risk of Rain, and a lot of Vlambeer games. A lot of indies have shown that it's possible to find an audience by being creative and a bit unorthodox in game design. It's very positive to see that it's theoretically possible for a small (and rather inexperienced) student-sized team to make a commercially successful or well-known game.

Neil Druckmann: The fact that students have the means to create a full game from scratch is huge. Nothing quite prepares you at making videogames than actually making a game. Showing a finished game also happens to be the strongest portfolio piece.

"I know I leveraged my professors' contacts when securing a handful of interviews while I was still in school, but ultimately it was my portfolio and the project-based experience I gained at the ETC that helped me land my internship at Naughty Dog"

Neil Druckmann

The indie scene also opens doors for students to pursue the kind of games that aren't being developed in the more traditional AAA space. There are now more and more examples of students coming out of school with a strong game (or a strong prototype) and starting their own successful indie companies.

: Ultimately, what impact do you think someone's education has on prospective employment at game companies? Have you noticed a change in the way companies view potential hires?

Albert Shih: I think having a game-related education definitely helps getting your foot through the door but it doesn't automatically translate to a job at a coveted company. The games industry is still an incredibly competitive place especially for entry positions, and companies will often hire from regular, non-game programs. However, working together with people who are interested in the same area of game development and being around people who are familiar with the industry definitely increases your chances of getting hired. Graduating from a games program isn't a golden ticket into the games industry, but it probably ves you a better chance than anything else.

Jesse Schell: I think good education helps in several ways. First and foremost, it ves a student a chance to build a solid portfolio, which is what studios care about most. It ves experience working on teams, and one of the biggest risks for a studio hiring someone new is whether they will fit in on the studio's team. Finally, it also ves access to an alumni network, which can be tremendously helpful for getting a foot in the door at a studio.

Neil Druckmann: As certain programs prove that they can produce a large number of great candidates, companies take notice, but for the most part we place more emphasis on a candidate's portfolio than the pedigree of their school. That's why it's important for a student to maintain and update their portfolio with their latest and greatest work.

Like Jesse said, a school's connection can play a big part in getting your foot in the door. I know I leveraged my professors' contacts when securing a handful of interviews while I was still in school, but ultimately it was my portfolio and the project-based experience I gained at the ETC that helped me land my internship at Naughty Dog.

Bar hopping 2014 (2014-04-30 15:55)

Here are some bar hopping photos I have taken while in St. Croix County. Wisconsin has 3580 bars in the state which is 3rd highest in the country. Since its Wisconsin, I can literally say my friends are there at any given time and most people will believe me. It's slick. I see bar photos like this all the time on Facebook (52 weeks a year). It's mainstream.

16.5 May

Scientific Linux 6.5 updates (2014-05-02 03:31)

I installed it on my friend's laptop that had Windows XP Professional on it. My friend likes to play Solitaire on it and use Firefox. Its Firefox doesn't freeze up on it. The kernel update freed up RAM by 120 MB. It always functions for him. This laptop does have an ClamAV antivirus installed, but that unsure about Linux Malware.

Libreoffice 4.2.2 starts up 50 % faster then Libreoffice 4.0

Just works 24/7/365.

The one operating system that will outlast the galaxy is RedHat Enterprise Linux. But so will CentOS, which is based on it with an almost religious fervor. And so will Scientific Linux, our test darling for today, which is also based on the said platform.

The thing is, Scientific Linux is a solution for those who seek absolutely stability and reliability plus long-term support and care less about the bling-bling, if to a point, because this distro does bring some joy to the masses. So somewhere in between Fedora and RHEL slash CentOS. I've played with Scientific quite a lot in the past, and it has always struck me as a decent kind of system, even for home use. Let's see what version 6.5 can do.

Teaser

Live usage

Scientific Linux is a fairly conservative distro overall. It comes with kernel 2.6.32, which was released back in 2010, it runs the super-mighty Gnome 2 desktop, and it feels like a blend between ancient history and modernity, all in one breath. So you will definitely not be amazed by its simple desktop layout. Pimping comes later on.

Live desktop

Network connectivity

Well, since I have a slightly new network topology at home, it was interesting to see how this oldster would cope, but it did so without any issues. Both 2.4GHz and 5GHz Wireless networks plus Bluetooth, jolly good. Samba, not so, I'm afraid, because the essential packages are missing from the live edition. We will sort this out in a separate guide.

No Samba

Multimedia

You get your basic share of Flash and MP3, so all is good there.

Youtube Flash

MP3 playback

Webcam

No worries, either.

Webcam

Installation

Scientific Linux 6.5 uses the old Anaconda installer, so it's simple and intuitive and very fast. There were no problems with the partitioning step, using local SSD storage on my T61 test box. I left Ubuntu in charge of the bootloader. Data copy took maybe 10 minutes. After that, there's the first boot, and you need to configure your user and root then.

Partitions

Installing

Bootloader

Using Scientific Linux

All right, so now it's time to start enjoying Carbon properly. BTW, for those of you who missed the reference, sixth release, atomic number 6 and all that. Good. Anyhow, you will immediately notice that Scientific Linux can be considered a little outdated for home use. The kernel comes with all the backports from later releases and firmware upgrade, so it's top notch, despite the number. The scientific software package is also fully modern. But the software for your desktop might be somewhat dusty.

Even after you subject Scientific Linux to some rigorous makeover and install a whole bunch of extra programs, they will still be running older versions, and some will even refuse to install because of the older GLIBC version. We will discuss these all in the much anticipated pimping guide, similar to what we have done with CentOS, but it is important that you remember this, or know this, upfront. Anyhow, the end product:

Final desktop

Applications

If you care about the basic set, you will want to download the full DVD rather than the live CD, because the collection is abysmally tiny. You only get a small number of programs, and a lot of stuff is simply not there. For example, you don't get a system monitor tool or even printing utilities in this version. Something worth mentioning. Your default arsenal includes Firefox, Thunderbird, TigerVNC, Gnome Movie Player, Cheese, and very little besides. No office suite, either.

Applications

Package management

Yum in the back, YumEx in the front. Okay, but slow. Moreover, Scientific Linux repositories are also rather slow. I tried different network providers that I have, but I never managed to get more than about 200-300KB/sec download, whereas all other venues yielded their expected full throughput. Unlike Fedora and friends, you don't get a broad regional spread, and Yum has seen a lot of speed improvements since. There's one reason to go with the newer stuff.

Package management

System resources & stability

Now, this is a crucial part. In this regard, you can't fault Carbon. Scientific Linux 6.5 is rock solid. No bugs, no errors, no warnings except the things that have been left out on purpose. Memory usage was also quite low at 250MB for a

64-bit version.

Resources

What is missing?

If you take a look at my previous review, you will notice problems with codecs. This time, they sorted it out. But Samba and printing remain a sore point. Furthermore, Scientific Linux has aged since, and some of the software you could install in the past is no longer available. So we will talk about all these in the pimping guide shortly.

Conclusion

Out of the box, Scientific Linux is a fairly boring and utterly predictable distribution, with great reliability and excellent performance and a large dose of meh for home users, who might expect more excitement. Sure, the multimedia front has been sorted out, but Samba and printing are still borked, especially in the very frugal, very spartan live CD edition. Oh, yes, someone accused me of being a Sambaphile, and how I find it ultra important and whatnot. Why not. It's a part of our lives. Samba, Samba, Samba, SAMBA!

All in all, without additional modifications and extra pimpage, which shall be our holy mission next, Scientific Linux 6.5 Carbon is more of a workhorse and less of a pony, and you might struggle finding its proper use on your desktop. But you do need to ask yourself what you cherish the most? Stability? Long-term support? Fancy software? Find your own answer and decide. If you're after quick gratification, this might not be the best solution, but as a sort of hybrid between actual science or work and some home fun, here's an excellent formula. But the CD version needs improving. Grade 7.5/10.

Cheers.

My Air Jordan Collection (2014-05-02 10:19)

Look how screwed up Facebook is (2014-05-06 18:59)

No comments at all! Completely alienated.

That car must be going to Justin Bieber concert.

. I believe 4/5 of SCC students once thought I was dimwitted so they stay as far away from me as possible. One person from St. Croix Central students thought I was on Lysergic acid diethylamide now-a-days.

new Android phones (2014-05-20 19:03)

My Motorola Droid Razor Maxx with Android 4.2 with a Android tablet with keyboard with Android 4.2. I bought Droids, because the Internet reviews were good. I also have two JXD S5110, JXD S501 on Android. The Gamepark Caanoos run on an old Linux kernel 2.6.22 from 2007, but can still emulate NES, SNES, Genesis, MS-DOS, Neo Geo and Gameboy Advance.

This old phone I partitioned with CyanogenMod 10.2 so it doesn't lock permanently. I can use it for Android applications: console emulators, and use the digital camera.

Illegal Childrens are all Shysters ~ Send them back (2014-05-29 01:58)

Just when things seem like they can't get any worse, Obama stoops to a new all time low. With the resounding defeat of Eric Cantor, liberal 'Dreamers' must look for new and creative ways to hoist their illegal, open-border policies upon law-abiding American citizens. Reminiscent of Hamas and Al Qaeda using children as human shields or bombs, it seems likely that Obama is using children as the new pressure point for cramming amnesty down our collective American throats.

Within the past week thousands of children from Honduras, El Salvador, and Guatemala have suddenly appeared on U.S. soil, reportedly traversing several enormous countries in the hope of secretly slipping into America. Perhaps I'm just cynical but none of this smells right. As a matter of fact, it all stinks.

Just exactly how do unaccompanied children manage to traverse two thousand miles of difficult terrain while avoiding dangerous drug cartels - all on their own - to reach the southern border of America? Since they are apparently arriving without benefit of adult supervision, money, vehicles, or material possessions, one can only speculate that perhaps they had some seriously coordinated support.

Meanwhile, the Obama administration does a double wink and feigns surprise at the onslaught of urchins. And America - get your checkbooks ready - because Obama can't work fast enough to secure \$2 billion in emergency funding from our bankrupt treasury.

Goodness knows, the timing for this couldn't be better because the Arab Spring is over, Russia is our best friend, and the world is secure (especially Iraq). Since Obama is gutting the military anyway, it seems a logical move to turn our 'unnecessary' military installations over to the Department of Health and Human Services. I mean, we've got to put these illegal kids somewhere - right? And while Obama and HHS are re-tasking our bases, it's only fitting to re-task our - now irrelevant - American soldiers so they can act as chief cooks and bottle washers.

Sorry, but I don't buy any of this.

I especially don't buy that the massive influx of kids was random or uncoordinated. Since Obama never allows anything to stand in the way of his progressive agenda, it seems likely that these underage trespassers are nothing less than a sick new tool to access the sympathetic nerves of American voters who don't want amnesty. I mean really, how can we turn our backs on pitiful, dirty, hungry children?

Easy. The same way we legally incarcerate any juvenile delinquent who breaks into private property and steals from the residents. Because that's exactly what these kids are. They're juvenile delinquents who've broken into the U.S. and who have no legal right to be here. Every one of them should be incarcerated (along with their parents) in a

secure facility and immediately flown back to where they came from.

I apologize in advance if my take on this serious mess sounds cold and heartless. But personally, I'd much rather pay for the cost of a one-way ticket than to be stuck with a permanent bill for their housing, food, clothing, healthcare, education, abortions, sex-change operations, electronics, cell phones, automobiles, legal defense funds, federal prison time, etc.

And when our overworked Border Patrol was unprepared for the onslaught of thousands of kids – why, pray tell, is America suddenly the bad guy? While it's unfortunate we didn't have five-star accommodations ready for their unannounced illegal arrivals, it's not America's shortfall.

Nope, it's just Obama reiterating for the thousandth time that America is a failure and the root of all the world's problems.

Personally, I'm sick to death of the illegal alien situation and believe in no uncertain terms that we need to seal the borders immediately. Furthermore, I wouldn't support or vote for a single candidate who believes otherwise because this terrible situation right now is just the tip of the iceberg and it's only going to get worse.

Obama is perpetrating another huge travesty on America. While he falls all over himself to help illegal would-be voters flooding here, he won't lift a finger to help our innocent U.S. citizens stuck in foreign prisons. From the two babies languishing with their abused mother in a federal prison in Sudan, to the U.S. Marine stuck in a Mexican jail, he refuses to even acknowledge their existence.

On another side, I imagine the newly minted \$2 billion Obama is miraculously diverting to these illegals would've gone a long way to continue funding the A-10 so that our troops on the ground would have the 'luxury' of continued close air support. Quite probably those five brave troops who died in Afghanistan last week would still be alive if Obama's hand picked USAF top brass hadn't refused to provide critical funding.

I also imagine the money would make a small dent in the backlog of veterans awaiting medical care through the underfunded VA. Quite possibly many of the veterans who were denied medical care and subsequently died might still be alive if we only had our priorities straight.

Volient Videogames decrease crime (2014-05-30 16:34)

ABSTRACT: Psychological studies predominately find a positive relationship between violent video game play and aggression. However, these studies cannot account for either aggressive effects of alternative activities video game playing substitutes for or the possible selection of relatively violent people into playing violent video games. That is, they lack external validity. We investigate the relationship between the prevalence of violent video games and violent crimes. Our results are consistent with two opposing effects. First, they support the behavioral effects as in the psychological studies. Second, they suggest a larger voluntary incapacitation effect in which playing either violent or non-violent games decrease crimes. Overall, violent video games lead to decreases in violent crime.

1. Introduction

From the sensational crime stories of the 19th century (Comstock and Buckly 1883), to the garish comic books of the early 20 th century, (Hadju 2009), to today's violent video games, Americans have made efforts to reduce children's access to violent media because of concerns over their social costs. These concerns may not be unfounded as numerous studies purport to find that violent media of all sorts, including games, can cause increases in

measured aggression. Aided in part by mounting evidence that violent video game play cause aggression, states have passed legislation criminalizing the distribution of violent video games to minors. 1

The research is not clear on how large the increase in aggression caused by these games. Craig Anderson, a long-time researcher in the effect of violent media on aggression has contended that "one possible contributing factor [to the Columbine High School killings was the shooters' habits of playing] violent video games. [The shooters] enjoyed playing the bloody shoot-'em-up video game Doom, a game licensed by the U.S. Army to train soldiers to effectively kill" (quoted in Kutner and Olson 2009). 2

1 In 2010, California passed a law making it a punishable offense for a distributor to sell a banned violent video to a minor. The US Supreme Court struck down this law in June, 2011.

2 In the opening paragraph of his literature review, Anderson (2004) suggested violent video games were responsible for the recent wave of school shootings since the late 1990s.

3

If violent video games can be shown to cause violence, then laws aimed at reducing access may benefit society at large. Yet to date, though there is ample evidence that violent video games cause aggression in a laboratory setting, laboratory stings cannot address issues of selection or incapacitation. Ward (2010) shows that adolescents who are otherwise predisposed to violence tend to select into video game play. Dahl and Dellavegna (2009) suggest that violent movies incapacitate violent crime offenders. Likewise, since the hours it takes to "beat the game" substitute for some other activity, a complete analysis of video game effects must consider the opportunity cost of this time. Violence may fall because violent people are attracted to violent games and because gamers engaged in virtual violence are not simultaneously engaged in actual violence.

To date, there is no evidence that violent video games cause violence or crime. In fact, two recently published studies analyzed the effect of violent media (movies and video game stores) on crime, and found increased exposure may have caused crime rates to decrease (Dahl and Dellavegna 2009; Ward 2011). These studies, unlike the laboratory studies, were conducted with observational data, which poses unique scientific challenge to establishing causality. However, since laboratory studies have never shown that video game violence causes crime or violence, despite researchers out-of-sample predictions (Anderson 2004), observational studies may be the only ethical and practical way to test for such a causal effect. To many in this field, it is logical to assume that if exposure to violent media causes aggression in the lab, it will therefore cause aggression when exposure occurs non-randomly outside the laboratory. Psychologists have adapted the general aggression model, or GAM, to the video game setting (Bushman and Anderson, 2002 and Anderson and Bushman, 2002).

GAM hypothesizes that violent media, including violent video games, increases a person's aggressive tendencies through a process of social learning that occurs simultaneous to the exposure itself. Violent media causes the person to mistakenly develop certain scripts, or rules

4

of thumb, that are used to interpret social situations both before they occur, as well as afterwards. GAM posits, in other words, that violent video games cause aggression by biasing individuals towards forming incorrect beliefs about relative danger that they are in. Perception biases towards hostility, therefore, can in turn cause the person to respond in either a "fight or flight" fashion. It may also permanently alter a person's point of view, creating an aggressive personality as an outcome (Bushman and Anderson 2002). A variant of the "rational addiction" model (Becker and Murphy 1988) may be a fair representation of GAM. The key insight for GAM is that consumption of a good in one period not only affects current utility directly but, through a capital stock accumulation mechanism, it also affects future utility indirectly.

The opportunity cost of playing a video game is not just pecuniary but also includes lost time. In fact, for many gamers, the value of the time spent playing a game may be worth much more than the pecuniary cost of the game. This time spent gaming cannot be spent on other activities, legitimate or otherwise, if time use is rival in consumption. The substitution patterns from video games may derive more from time use effects than from pecuniary costs (Becker, 1965). Evidence for video games having a time use component can be found in Stinebrickner and Stinebrickner (2008). The authors identified a causal effect of studying on academic performance by utilizing the random assignment of college students to roommates with a video game console, relative to the counterfactual, which caused students to study less often, and in turn, to perform worse in school

In this paper, we argue that since laboratory experiments have not examined the time use effects of video games, which incapacitate violent activity by drawing individual gamers into extended gameplay, laboratory studies may be poor predictors of the net effects of violent video games in society. Consequently, they overstate the importance of video game induced aggression as a social cost. We argue that since both aggression and time use are a

5

consequence of playing violent video games, then the policy relevance of violent video game regulation depends critically on the degree to which the one outweighs the other. If, as we find in our study, the time use effect of violent video games reduces crime by more than the aggression effects increase it, then the case for regulatory intervention becomes weaker.

While some early work has been done on the long-term effects of video game play, nearly all

the laboratory evidence that currently exists has only uncovered very short-term effects, which is when time use effects could be the most important. ³

As with Dahl and Dellavegna (2009) and Ward (2011), we use a proxy for individuals' exposure to violent video games – the volume of sales of violent video games in a week among the top 50 best-selling video games from 2005-2008 – and relate it to a marker for violent behaviors – weekly aggregate violent crime incidents from the National Incident Based Reporting System (NIBRS). Using time series modeling, as well as an instrumental variables approach, we estimate the effect of an increased weekly volume of violent video game sales on the number of criminal incidents recorded to law enforcement over the subsequent weeks and find that increased violent video games are associated with decreases in crime rates, similar to Dahl and Dellavegna (2009) and Ward (2011).

One advantage of our approach is that we can attempt to disentangle the separate effects of both a behavioral change toward more aggression and incapacitation due to time use. Our results provide some support for the psychological finding that, absent incapacitation, violent video games lead to more aggression as measured by violent crimes. However, our results also suggest that this is dominated by possible incapacitation and selection effects leading to a net reduction in violent crimes. This approach can help guide

³ In Anderson (2004), the author notes the glaring omission of longitudinal studies of effects of violent video games on aggression in his conclusions on the state of the research, calling for more studies aimed at investigating the long-term effects. If nothing else, though, this makes our point that the abundance of evidence that we know does exist only speaks to short-term effects of violent video games on aggression, which is the purpose of this study here.

6

investigators to develop more holistic research designs, such as field experimentation and other quasi-experimental methodologies, to determine whether the net social costs of violent games are non-trivial. The main shortcoming of our approach is due to the limitations of our data on game sales. Unfortunately, the industry does not report cross-sectional variation in game sales – only the national weekly sales of the top 50 highest grossing games are available. As a result, our paper follows a methodology similar to Dahl and Dellavegna (2009), who estimated the impact of violent movies, proxied by daily ticket sales, on crime using only time series methods.

The paper is structured as follows: the second section our data and methodology. The third presents and discusses our results. We conclude with a brief discussion of the implications for public policy.

III. Data and Methodology

Randomized assignment of a treatment with comparison groups used to make comparative counterfactuals is widely considered the “gold standard” in the social sciences (Fisher 1935; Campbell and Stanley 1963; Rosenbaum 2002). Yet, it is widely known that experimentalism may fail to identify true causal effects for a variety of reasons (Berk 2005; Deaton, 2010; Heckman and Urzua, 2010; Imbens 2010). While others have noted the failure of researchers in this literature to satisfy the rigorous conditions for establishing causality (Ferguson and Kilburn 2008; Olson and Kuttner 2009) our study will focus on a separate statistical challenge not mentioned in these earlier studies: the challenge of internal versus external validity.

Finding of a positive effect of violent games on aggression does not therefore mean that violent video games play will cause crime if the incapacitation effects from time use

7

swamp the marginal increase in aggression in the person. By design, laboratory studies – both by ignoring alternative time use and by treating both treatment and control groups with this separate effect – cannot be used to guide researchers as to what expect outside the lab. In this sense, the studies have internal validity, but may not have external validity on the incidence of socially costly aggression from violent video game play (Campbell and Stanley 1963).

Quasi-experimental methods, such as panel econometric methods, regression discontinuity and instrumental variables, as well as field experimentation (Harrison and List 2004; Angrist 2006) may be more suitable estimating the social costs of violent video games since they allow for the estimation of all known and unknown theoretical mechanisms. In this section, we explain our research design and the data used to overcome some of the limitations of a purely experimental methodology.

A. Empirical Methodology

The models of video game violence suggest that the effect of violent video game play on crime will depend on whether a sizable stock of aggressive tendencies accumulates and on the games' time use intensities.

Since the theoretical predictions are ambiguous and the policy relevance of the laboratory studies is unclear, empirical work outside of a laboratory context is warranted. However, without experimental data, causal inference is problematic. Correlations between video game play and crime may or may not reflect a causal relationship if the unobserved determinants of crime are correlated with the determinants of video game play. For instance, bad weather such as rain or heavy snow which causes individuals to remain at home would both increase the likelihood of playing video games and decrease the returns to crime through higher chances of finding a resident at home. Hence, negative correlations between crime and

violent video game play could purely be a consequence of omitted variable bias. Similarly, video game publishers could strategically release violent video games during periods of time

8

when gamers have a lower value of time. But a low opportunity cost of time would affect both video game sales and crime. For example, both video game sales and the crime rate increase during summer when most teenagers are out of school..

One solution to omitted variable bias when there is time-variant heterogeneity is to employ instrumental variables (IVs). The researcher must have instruments that are strongly correlated with individual game play but uncorrelated with the determinants of crime. This approach exploits exogenous variation in video game play that is not due merely to changes in the determinants of crime providing greater assurance that the estimated effect is causal. We use the ratings of video games by a video games rating agency as IVs. Our IV strategy exploits the variation in game sales correlated only with the variation in quality, and thus is mostly free of variation due to factors related to crime.

Zhu and Zhang (2010) show that consumer reviews of video games are positively related to game sales. Ratings are valuable pieces of information for video games because games are complex experience goods for which gamers cannot know their preferences without playing. Our data on professional ratings contain rich information that communicates the kinds of information that gamers value in forecasting their beliefs about the game, and as beliefs and anticipation are drivers of the game sales, we would expect these rating institutions to play important roles in forming consumer prior beliefs about the game and therefore their purchases. But we also have some evidence from other industries that would suggest scores would independently cause purchases to rise, independent of the unobserved factors that cause expert opinion and purchases to be highly correlated. Reinstein and Snyder (2005) used exogenous variation in Siskel and Ebert movie ratings due to disruptions in their pair's reviewing to determine a causal effect on movie demand. More recently, Hilger Rafert and Villas-Boas (2010) found that randomly assigned expert scores on bottles of wine in a retail grocery store caused an increase in sales for the higher rated, but less expensive, wines.

9

While these studies do not confirm that there are exogenous forces in video game ratings that drive consumer purchases, they are suggestive.

We begin by estimating a standard multivariate regression model of the incidence of various crimes as functions of, among other controls, the prevalence of non-violent and violent video games. Our outcome variables of interest, C_t , are the total number of reported criminal incidents in week t as well as the number of such incidents that are classified as

violent. While one might interpret any criminal incident as reflecting some level of aggression, we interpret violent crimes as reflecting more aggression. While the dataset we use documents criminal offenses on a daily basis, since the video game sales data are available only on a weekly basis, we aggregate crimes into weekly measures to focus on same-week exposure. Accordingly, we employ a simple least squares estimator so as to more easily instrument for video game exposure. ⁶

Our main explanatory variables are aggregated current and lagged values of weekly sales volumes for both non-violent and violent video games. Video games appear to depreciate quickly with use. This may be because new games are played intensively for a few weeks after purchase and are not replaced with a new game until after some diminishing returns have been reached, or it may suggest that firms typically stagger the release dates of games. We measure the cumulative effect of games with the sales volume of the current week's sales, along with the various lags of previous weeks' sales, so as to capture the effect of higher volume of gameplay with an unknown time lag to trigger crime.

Our benchmark specification is:

$$\begin{aligned} &() \sum \\ &[(\\ &)] \\ &\sum \\ &[(\\ &)] \end{aligned}$$

where L^j is the lag operator of length j . The number of crime incidents depends on the exposure to violent video games

and non-violent games. The sum over j of can be

⁶ Our empirical methodology is in large part based on Dellavegna and Dahl's (2008) study of the effect of movie violence on crime.

10

interpreted as the cumulative percentage increase over the j weeks in criminal incidents for each percent increase in violent video games sold in week t while the similar sum for can

be similarly interpreted for non-violent video games. The trend and month dummies attempt to account for secular increases and seasonality in video game purchases. The identification of the parameters is based on the time-series variation in the style of violence in the video games. Again, we instrument for both types of games using average quality ratings of the games on the market that week.

The measured effect from this specification can represent a confluence of multiple effects. It is possible for there to be a positive behavioral effect, as found in the laboratory, and a negative voluntary incapacitation effect. This specification will typically only measure the net effect. However, it may be possible to disentangle the behavioral effects from the incapacitation effect from the estimated cumulative effects from non-violent and violent games. Both should incorporate incapacitation effects but only the former will include a behavioral effect toward aggression. The difference between the two provides an estimate of a pure aggression effect.

Besides the benchmark specification we employ two additional specifications as robustness checks. These specifications identify specific segments of the population and locations where we expect a differential a gaming-to-violence link, e.g. crimes committed by teens and young adults and those committed at high school and college campuses. For each crime incident, NIRBS provides information on the age of the offender and on the location of the incident. In the first robustness check, we select a sub-sample of offenders aged between 15 and 30 years and compare these results to the results obtained from a sub-sample of offenders who are 35 to 50 years old. In our second check, we extend our estimation procedure to compare the effects on the number of incidents reported on school campuses to the number committed at other locations.

11

B. Video Game Sales Data

Our treatment variables for video game play are derived from the volume of video game unit sales data from VGChartz 7 . Beginning consistently in 2005, this site has provided unit sales volume information for each of the top 50 selling video console based games each week. Among other information, volumes are reported worldwide as well as for several geographical areas including USA, Japan, Europe, Middle East, Africa or Asia. In our sample period 2005 to 2008 the VGChartz dataset contains 1,091 different titles over the 208 weeks for the US with some of these titles being the same game for different gaming consoles. In sum, the games are provided from 47 different publishers and designed for nine different gaming consoles. While VGChartz includes the top 50 selling games each week, it only covers a portion of all sales in the US video game market. A game's week of release is almost always its top selling week. Figure 1 indicates that most games stay in the top 50 for only a few weeks. Moreover, as Figure 2 indicates, the top selling games sell much more than even the lower ranked top 50 games. These features suggest that there is considerable week-to-week variation in the games, and the types of games, being played. According to the Entertainment Software Association (ESA) 8 VGChartz account for about one-quarter of all

units in 2005 (ESA Annual Report, 2010). The ESA also includes sales of non-console based games such as computer and smartphone games. Still, this fraction rises to almost one-half in 2008.

Our measure of violent videogame content stems from the Entertainment Software Rating Board (ESRB). ⁹ This non-profit body independently assigns a technical rating (E, E10, T, M, and A) which defines the audience the game is appropriate for where E classifies games for everybody, E10 for everyone aged 10 and up, T for teens, M games for a mature audience, and A for adult content. In addition, ESRB provides detailed description of the content in each

7 <http://www.vgchartz.com/>

8 <http://www.theesa.com> – The reported numbers from ESA also include games for personal computers which amount to about 10 percent of the market each year and are intentionally not included in VGChartz.

9 <http://www.esrb.org>

12

game on which the rating was made, including the style of violence, e. g. language, violence, or adult themes. For all of the 1,091 titles in our sample we collected the appropriate ESRB-rating and all content descriptors. Based on this content information we identify 762 non-violent and 329 violent games, of which 105 titles are described as intensely violent. Almost all violent games are rated T or M. All intensely violent games are rated M. Since most of the policy concern stems from these intensely violent games, these are the games we concentrate on. ¹⁰ Merging both data sources together we can construct measures of the aggregate unit sales of non-violent and intensely violent video games for each week. The weekly sales are pictured in Figure 3 for all games and for intensely violent games. Overall, the two graphs follow a similar pattern with a peak around the Christmas gift purchasing period. In the mid of 2008, however, the intense violent games seem to account for almost all sales of the violent games.

As argued above the prevalence of video games in a week is not randomly distributed over the sample and therefore may be endogenous. For instance, if changing economic conditions that caused a rise in unemployment, and in turn crime rates, may also have caused leisure activities like video games to rise, then we might observe positive correlations between video game play and crime that is driven purely by these changing economic factors (Raphael and Winter-Ebmer 2001; Gould, Weinberg and Mustard 2002). We address the potential endogeneity of video games with instrumental variables using expert review of each title as an instrument for purchases.

Our expert review data comes from the GameSpot website. ¹¹ GameSpot provides news, reviews, previews, downloads and other information for video games. Launched in

May 1996 GameSpot's main page has links to the latest news, reviews, previews and portals

10 We have also performed our analysis for the broader "violent" and "intensely violent" definition of a violent game. Qualitatively, all of our general results described below hold however parameter estimates are smaller (in absolute value terms) and are less precisely estimated.

11 <http://www.gamespot.com>

13

for all current platforms. It also includes a list of the most popular games on the site and a search engine for users to track down games of interest. The GameSpot staff reviewed all but a handful of the games in our sample and rated the quality of the titles on a scale from 1 to 10 with 10 being the best possible rank. These so-called GameSpot-scores assigned to each game are intended to provide an at-a-glance sense of the overall quality of the game. The overall rating is based on evaluations of graphics, sound, gameplay, replay value and reviewer's tilt. A possible issue with this measure is that GameSpot changed the rating system in mid of 2007 to employ guidelines and a philosophy focusing more on a prospective customer rather than a hardcore-fan that the reviewers had focused on before. Nevertheless, the five mentioned aspects are essential parts of a game that are still reviewed in detail by a GameSpot reviewer but will not get an aspect-specific rating score anymore. We do not consider this change in the GameSpot focus to noticeably affect the overall GameSpot-score.

We expect the quality rating of the games to be positively correlated with their sales as better-rated games usually are more highly demanded. It is possible that some games have the opposite relationship if they are based on a popular tie-in from a movie, e. g. Harry Potter, or sequels, e. g. the Final Fantasy series. Developers know that these games will sell well due to their popular tie-in which may lower the returns to investment in game quality. However, in table 2 we show that, a game title's weekly sales are positively related to the Game Spot score for games of different violence profiles.

C. Crime Data

For our measure of weekly crime, we used the National Incident Based Reporting System (NIBRS). NIBRS is a federal data collection program begun by the Bureau of Justice Statistics in 1991 for gathering and distributing detailed information on criminal incidents for participating jurisdictions and agencies. Participating agencies and states submit detailed information about criminal incidents not contained in other data sets, such as the Uniform Crime Reports. For instance, whereas the Uniform Crime Reports contain information on all

14

arrests and cleared offenses for the eight Index crimes, NIBRS consists of individual incident records for all eight index crimes and the 38 other offenses (Part II offenses) at the calendar

date and hourly level (Rantala and Edwards 2001). A potential drawback of NIBRS is that many law enforcement agencies do not participate. [Need a sentence or two here Scott] We aggregate across only the jurisdictions that participated during each of our sample years. Because of the detailed information about the incident, including the precise time and date of the incident, economists such as Dahl and Dellavegna (2009), Card and Dahl (2009), Jacob and Moretti (2003) and Lefgren, Jacobs and Moretti (2007) have used it for event studies. In our case, we exploit detailed information about the age of offenders and the crime's location – on school campuses or not – for our robustness checks.

Crimes follow a seasonal pattern. Figure 4 indicates a consistent pattern of gradual increases in both violent and non-violent crimes from winter to summer. Our method was developed to account for seasonality in both of our main variables of interest crime and games. Much of the seasonality in crimes is believed to be due to weather while seasonality in games is likely due to holiday gift giving (Lefgren, Jacobs and Moretti 2007). Failure to address this will likely lead to spurious correlations. As indicated above, we accommodate this in two ways. First, month dummy variables should capture much of the seasonality. Second, using Game Spot scores as IVs should isolate the variation in game sales due to game quality.

Our final sample includes 208 weekly observations on video games sales and crimes from early 2005 through 2008. However, eight observations are excluded from final regressions because of the use of lagged video game sales. Table 3 reports basic descriptive statistics for our sample.

IV. Results

A. Basic Results

15

Our basic regression results are presented in Tables 4 and 5. Table 4 reports estimates of specifications for various lags of the effect video games sales on all crimes. Video games are separated between those that the ESRB rated as “intensely violent” and those that are not. Recall that the lesser rating of merely “violent” does not warrant an ESRB rating of “M.”¹² Control variables include month dummies to capture seasonality and a time trend to capture any secular trend. The columns from left to right add more lags of video games to the specification so as to measure possible inter-temporal effects of game purchases in one week affecting crime in subsequent weeks through continued play. Finally, each regression employs a 2SLS estimator with the same set of current and eight lags of Game Spot scores averaged over intensely violent games and over games that are not intensely violent. Since the specifications are over-identified, we test for possible endogeneity of the instrument set. As

expected, in all cases, we fail to reject the exogeneity of Game Spot scores with respect to the level of crime. 13

The estimated effect of video games sales in any single week is small. Most individual coefficient estimates are negative but few are significantly different from zero. It appears that lags of up to five weeks of video game sales may be associated with current crime. It is not clear from this table whether violent games have a different effect from those that are not violent. For ease of comparison, we report the sum of the coefficients for various lags for both in the top panel of Table 6 to calculate the cumulative effect of a change in video games over time. Here it becomes clearer that video games are estimated to have an overall negative effect on crime for specifications that include from two to six lags. That is, both violent and non-violent games are associated with reductions in crimes. However, the effect is small. Since our specification is double log, these estimates can be interpreted as elasticities with 12 Unreported regressions comparing games that are either “intensely violent” or “violent” versus all other games generally yield much less precisely estimated parameters.

13 Estimates assuming that game sales are exogenously determined typically generated smaller (in absolute value terms) and much less precisely estimated coefficients.

16

values of up to -0.025 for non-violent games and -0.010 for violent games. These estimates suggest that, over all the mechanisms through which videogame play can affect crime, the net effect is to reduce crime.

As mentioned above, these estimates may also allow us to make some inferences that distinguish between potential mechanisms. While both violent and non-violent games are hypothesized to have incapacitation effects, only violent games are hypothesized to alter behaviors. Indeed, the top panel of Table 6 indicates that the difference in effects between violent and non-violent games is for violent games to reduce crime by a smaller amount and that this difference is statistically significant for specifications that include between one and five lags. Moreover, it is possible that the incapacitation effect for violent games is greater than for non-violent games, though we cannot test this hypothesis. If so, the difference of these estimates may represent a downwardly biased estimate of a behavioral effect. This provides some support for the laboratory findings of a reinforcing behavioral effect that partially counterbalances the incapacitation effect.

Table 5 repeats these specifications where the dependent variable is now the log of violent crimes. By doing so, we focus on criminal acts that clearly entail an element of aggression. Again, we include various lags for the effects of video games and, again, more individual estimates are negative than positive but few are significantly different from zero.

The bottom panel of Table 6 reports the aggregation of the lagged video game coefficients to calculate the cumulative effects. From this panel we usually find an overall negative effect of video games on the number of violent criminal incidents. These estimates are quite similar to those for all crimes in upper panel of this table. If anything, these parameter estimates are slightly larger (in absolute value terms) and aggregations with more specifications yield results significantly different from zero. These estimates indicate that both violent and non-

17

violent video game play is generally associated with reductions in the number of violent crimes.

The test for a difference in the effects for violent and non-violent games may be more informative. There are no known previously hypothesized mechanisms through which non-violent games would affect violent crimes. We propose that the appropriate test for violent video games affecting violent behavior is the difference in these effects by game type. In this case, the marginal effect of violent video games, relative to non-violent games, is to increase violent crimes. Decomposing the two effects suggests that a one hundred percent increase in violent video game sales implies an incapacitation effect reducing violent crime by as much as 2.6 % and an aggression effect increasing violent crimes by as much as 1.5 %.

B. Age of Offender Results

A potential robustness check is to examine the effects of video games on criminal offenders by age of offender. While the age profile of video game players is increasing, video games are still primarily played by children, teens and younger adults. For most offenses, the NIBRS data records information on the age of the offenders for an incident. We separately examine the effects of video game sales on offenders aged 15-30, the prime video game playing population, versus those 35-50, a population for which video game play is not as popular. If our basic results were spurious and did not reflect any direct link between video game play and criminal acts, we would have no reason to expect a differential effect by age group. In contrast, under our hypotheses, we would expect larger effects for the younger group.

Table 7 reports cumulative estimates for both these younger and older groups. The specifications are otherwise identical to those reported in Table 4. However, rather than report the individual estimates as in Tables 4 and 5, we report the estimated sums over all lags as in

18

Table 6. As before, specifications with lags from between two and five achieve some level of statistical significance for both the young and the old. The estimated effects of both violent and non-violent video games are both negative, as before. And, as before, violent video games

decrease crime by less than do non-violent video games. That is, there are few, if any, qualitative differences across the two groups.

Table 8 reports cumulative estimates where the dependent variable is violent crimes, for both these younger and older groups. The specifications are otherwise identical to those reported in Table 5 and again we report the estimated sum of effects over all lags as in Table 6. Now, there are noticeable differences across the two groups. None of the estimates for the older group approach traditional levels of statistical significance. In contrast, the estimates for the younger group are generally larger (in absolute value) and many are statistically significant. In addition, the differences in estimates between violent and nonviolent games are often statistically significant. We again find that, for the younger group, non-violent games, as well as violent games, reduce the number of violent crimes. In these specifications, the measured by the difference between the coefficients in the two rows which is about 0.06. Thus, this is evidence that the behavioral effect of violent video games on violent behavior is found only within the younger population that tends to play video games more intensively.

C. On Campus Results

Another potential robustness check is to distinguish between crimes committed at schools and colleges and those committed elsewhere. Schools and colleges tend to aggregate people who are of video game playing age. The NIBRS data record the location of each incident as a categorical variable where one possible choice out of eleven is “school or college campus.” One advantage of this variable over the age of offender variable is that it is recorded for all incidents while the age of offender can be missing if no one witnessed the incident in progress. One disadvantage is that crimes committed at schools and colleges need not be

committed by a member of the younger video game playing demographic, though most are. Perhaps a bigger problem is that many of the younger video game playing population commit crimes away from schools. Finally, since such a small number of crimes are committed on campus, we may lose statistical power for that sub-sample while the off-campus sub-sample will be quite similar to the overall sample.

Table 9 reports cumulative estimates for both crimes committed on campuses and those committed off-campus. The specifications are otherwise identical to those reported in Table 4 but we report the estimated cumulative effect over all lags as in Table 6. As before, specifications with lags from between two and five achieve some level of statistical significance for both the young and the old. The pattern of estimated effects for both violent and non-violent video games is similar to before except that they are much larger for the on-campus sample than off-campus sample. In the lower panel, the estimates are qualitatively

similar to the base results in Table 6. However, the upper panel estimates are about five times larger. Other than the difference in magnitudes, the pattern of effects on-campus is unchanged. There is still a negative effect for non-violent video games in columns 2-5 that we interpret as an incapacitation effect. The estimated effect for violent video games is statistically significantly smaller (in absolute value) and we interpret the difference as a possible estimate of a behavioral effect of violent video games on crime for this sub-sample. Table 10 reports cumulative estimates where the dependent variable is the number of violent crimes, for both crimes on and off campus. The specifications are otherwise identical to those reported in Table 2 and again we report the estimated sum of effects over all lags as in Table 6. In this case, fewer effects are estimated to be significantly different from zero. However, the pattern is similar to those for all crimes in table 9. The magnitudes are about five times larger for the on-campus sub-sample relative to the off-campus sub-sample. As 20

expected, the off-campus results are more similar our basic results reported in the bottom panel of Table 6.

V. Conclusion

Content regulation of the video game industry is usually predicated on the notion that the industry has large and negative social costs through games' effect on aggression. Many researchers have argued that these games may also have caused extreme violence, such as school shootings, because laboratory evidence has found an abundance of evidence linking gameplay to aggression. Yet few studies before this one had examined the impact of these games on crime, with the exception of Ward (2011) and Dahl and Dellavegna (2009). Consistent with these studies, we find that the social costs of violent video games may be considerably lower, or even non-existent, once one incorporates the time use effect into analysis.

These analyses are suggestive of the hypothesis that violent video games, like all video games, paradoxically may reduce violence while increasing the aggressiveness of individuals by simply shifting these individuals out of alternative activities where crime is more likely to occur. Insofar as our findings suggest that the operating mechanism by which violent gameplay causes crime to fall is the gameplay itself, and not the violence, then regulations should be carefully designed so as to avoid inadvertently reducing the time intensity, or the appeal, of video games.

Our findings also suggest unique challenges to game regulations. Because GAM proposes that the individual playing violent video games is developing, accidentally, a biased hermeneutic towards people wherein they believe they are in danger, then the decrease in

violent outcomes that we observe in our study – the incapacitation effect from time use – may
21

be masking the long-run harm to society if these violent behaviors are developing within gamers. This suggests that regulation aimed at reducing violent imagery and content in games could in the long-run reduce the aggression capital stock among gamers, but potentially also cause crime to increase in the short-run if the marginal player is being drawn out of violent activities. This may be too costly a tradeoff, and may not pass any cost-benefit test. But another possibility is that individuals who play games could be regularly taught to recognize these errors in their framing of situations, which theoretically would reduce the aggressive capital and thus reduce any negative outcome that is determined by the amount of aggression the person has built up, without losing the short-run gains from crime reduction.

16.6 June

Democrats and Magic the Gathering is destroying the videogame industry (2014-06-01 17:14)

Due to bureaucratic collectivism, people cannot buy a ton of videogames like in the 6th generation with Gamecube, PS2 and Xbox. Wizards of the Coast's Magic the Gathering GAMBLING is taking the place of videogame industry among children (more expensive). I may have Magic the Gathering Duels of the Planewalkers 2013/2014, but I am no addict.

Northrop Auditorium (2014-06-09 08:31)

I haven't been to the University of Minnesota for 10 years, and never been to the Northrop Auditorium. I saw the Bill O'Reilly & Dennis Miller Bolder & Fresher Tour and recorded audio. I took pictures, but Bill and Dennis are very blurry. Bill said that the Hurricane Sandy which hit New York around the election convinced all the idiots in the United States to vote for Obama. McCain had a similar hurricane Gustav. It is completely psycho that hurricanes decide presidential elections. If a hurricane decides the 2016 election, I'll move to Australia.

Critical Theory in Common Core (2014-06-11 05:38)

one sense, that these Marxist revolutionaries are little more than political busybodies. Who asked them to go about changing the culture?

The Frankfurt School, about which I have written previously, was a group of mostly German Marxists who came to this country when Hitler took over in Germany. Their concept of totalitarianism didn't agree with his. Interestingly enough, they were welcomed with open arms at Columbia University, where they began to work eagerly at the destruction of American culture, and particularly Christian culture. What does that tell you about Columbia University? The Frankfurt School is no longer officially in existence now, but those who have been bred and taught with that mindset and worldview are still laboring at the overthrow of American culture. They are close enough to their goal now that they can see the light at the end of the tunnel.

The article from <http://www.discoverthenetworks.org> that I've been quoting from has observed: "The Frankfurt School's studies combined Marxist analysis with Freudian psychoanalysis to form the basis of what became known as 'Critical Theory.' Critical Theory was essentially destructive criticism of the main elements of Western culture, including Christianity, capitalism, authority, the family, patriarchy,...morality, tradition, sexual restraint, loyalty, patriotism, nationalism, heredity..." They didn't specifically mention education, but if you understand the Marxist mindset you know that has to be a major part of it.

Part of the destruction of any culture is the destruction of standards of any kind and the truth by which those standards are revealed. I just read a post on the Freedom Outpost web site. It was posted on August 5th and the headline

for it was: “Common Core Standards: $3 \times 4 = 11$ Is Ok As long as you can explain why.” The article stated: “Seriously, I could not believe that a grown woman was shoveling this stuff, but lo and behold, watch a Common Core promoter actually say that it’s fine that children think that $3 \times 4 = 11$. She just wants to know if they can reason and explain how they came to the answer! In other words, there are no right answers in Common Core. Apparently there will be no logic or reasoning in Common Core either. They just want you to be a dumb, useful idiot. If this is going on in math, what do you think would happen if, say a kid claimed that Bill Clinton was the first president of the United States?” There was a video presentation with this post and the lady that was “shoveling” out this mathematical bovine fertilizer said: “But even under the new common core even if they said $3 \times 4 = 11$, if they were able to explain their reasoning and explain how they came up with their answer. Really in words and in oral explanation and they showed it in a picture but they got the final answer wrong. We’re more focused on the how and the why.” In other words, its perfectly okay for kids to come up with the wrong answer if they can just explain how they got that wrong answer. Interestingly enough, this “event” occurred in District 46, in Grayslake, Illinois on July 17th. Are you really surprised? The writer of this article states that this is the kind of nonsense you get when the feds get involved in education. On that point I can agree with him. But then he goes on to state that the states really need to put the feds in their place and to resume the powers the feds were not given in the Constitution. In principle he’s right, except, in all actuality, not even the state, let alone the feds, should be involved in education. That is a parental function—not a state function, not even a local government function. A major part of our problem in this country is that we don’t know our history well enough to grasp what governments at various levels should and should not be doing. And education is one of those things they shouldn’t be doing—at any level!

Awhile back, New York State Education Commisar (excuse me I should have said Commissioner) John King gave a speech about education and “civil rights.” According to King, opposing Common Core is “racist.” Ah, there’s that old race card being played yet another time—if you didn’t vote for Obama you’re a racist; if you are opposed to illegal aliens swamping our Southern border, you must be a racist; if you are opposed to Common Core in education you must be a racist. Opposition to Common Core has now become part of the “racist” guilt trip the system attempts to lay on common folks to shut them up—only it’s not working quite as well anymore. People are starting to wake up and refusing to shut up, and that’s good.

King went on to loftily note that “Common Core educational standards are an attempt to close the achievement gap between minority and low income students relative to their peers. He urges parents and educators not to back off from their commitment to Common Core.” This from an article in the Times Union <http://www.timesunion.com> And he’s right about Common Core—it will bridge the gap between minority and low income students and others by working to make sure they are all equally dumbed down, so no one, no matter how intelligent, knows much of anything. Can you honestly picture an educational system that doesn’t care whether the kids get the right answers in math or not as long as they can explain their wrong answer, doing anything to improve the educational standards for anyone? It’s all just more bovine fertilizer and it’s being shoved down people’s throats with an earth mover!

Back in October of 2013 there was an article on TNReport by the Tennessee Republican Assembly which called on legislators to oppose “Commie Core.” And that’s what the article called it. In part, the article said: “We are already seeing the negative effects of Common Core Federal Mandates in our schools, and now we will have thinly veiled socialist and communist agendas promoted with Tennessee tax dollars.” This according to Sharon Ford, President of the Tennessee Republican Assembly. She noted an expenditure of \$700,000 in “Race to the top” money that was spent to send 18 elementary, junior high, and high school principals to Red China so they could learn how to teach “the Chinese way.” Ford, with some perception, said “China is neither as diverse or as open to creativity and free speech as the U.S. It is not a system we should replicate in Tennessee. And some people wonder why Common Core is called Commie Core.”

Common Core is part of the agenda to destroy educational standards and to force all students in the country to eventually become part of it, one way or another. It is, therefore, the Marxist Critical Theory program being used to destroy any remaining standards in American education.

Any school system anywhere in the country where people have finally figured out what Common Core is really all about and they want to opt out of it should be encouraged and supported if they make that effort. Otherwise the kids entrusted to their care become victims of the Marxist Critical Theory technique where all real educational standards are eventually erased. The Marxists, whether they call themselves that or not, have nothing less in mind than the total

destruction of any remaining Christian culture we still possess and if they can accomplish that end while brainwashing our kids by removing and real educational standards, they will do so in a heart beat.

NATO was created for the US Department of Defense (2014-06-16 07:19)

For all those stupid people who think that NATO was created for Europe. That's not that true. It was created as an extension of the US military for the United States. The Europeans don't need help, it is the United States that needs help. NATO completely follows the US Department of Defense direction. NATO is owned by the Department of Defense of the United States. Russia doesn't give a damn about NATO countries, but Putin only cares about what Department of Defense says and does.

World War III Theory (2014-06-18 17:28)

When confusion and misinformation get together in the dark, paranoia is born. Fears of war, violence, and oppression fester and grow in the minds of the populace pushing everything but a misguided assurance of certain doom into the shadows. Out of this cramped and huddled mindset we get the bastardized half-brother of critical thinking: conspiracy theories.

Claiming that World War III is just over the horizon is as crazy as it gets, but the state of the world is showing some eerie similarities to the pre-World War II global picture. And history is a creature of habit.

10 An Unexpected Invasion

Photo credit: Voice of America

On February 27, 2014, Russian soldiers strapped on their marching boots and took over several airports in Crimea. As this is being written, roughly 6,000 Russian troops are moving across the Crimean peninsula and forcibly taking operational control of military bases, communications centers, and government buildings.

This is an invasion that has been a long time in the making, and it's certainly not the first time Russia has made power plays in the Ukraine. Ever since 1783, Ukraine and Russia (for a time the Soviet Union) have played hot potato with Crimea, leaving a bubbling brew of split nationalism struggling to coexist on the little peninsula.

But the arrival of Russian troops is just the most recent step in a tumultuous few weeks for Ukraine. The country has seen its Russia-sympathizing president, Viktor Yanukovych, become a fugitive, a Russian citizen become the Crimean city of Sevastopol's mayor, and an emergency meeting of Crimea's parliament elect Sergey Aksyonov as the new Prime Minister of Crimea—at gunpoint. Aksyonov has declared that he will follow orders from the ousted Yanukovych, who is currently seeking refuge in Russia. The country's politics are in tatters.

9 The Ukrainian Conflict Is Reaching A Boiling Point

Photo credit: John Jazwiec

Ukrainian nationalists are calling Putin's invasion an act of war; Russians in Ukraine are calling it an act of salvation. Riots are flaring up all across the country as the two dominant political forces come to a head. This video shows two men being beaten by a pro-Russian mob in Kharkiv, the USSR's Bolshevik-run capital leading up to World War II—and that's where Putin's army looks headed next.

You can get a pretty clear view of the political alliances of Ukraine with the above map, which shows the results of the 2010 election. Blue represents areas that supported Viktor Yanukovych, so you can consider those regions comparatively pro-Russian. The purple areas voted for an opposing candidate, Yulia Tymoshenko. The darker the color, the stronger the support. Kharkiv and Donetsk are firmly in the blue, and represent two major Ukrainian cities with a strong industrial infrastructure—and both are historically Russian.

This is a group of very assertive, very nationalistic people at arms over the one issue that holds paramount importance:

heritage. And historically, gray areas are reserved for the losers; it's the inflexible, dyed-in-the-wool believers in a cause who triumph in a conflict. Russia sees this as good news, picturing much support from the country they're invading. As one Ukrainian bitterly put it, "No one asked us. We are like puppets for them. We have one Tsar and one god—Putin."

8 Russia's License For Aggression

Photo credit: The Presidential Press and Information Office

Though the UN, NATO, and the US have all gone on high alert, the Crimean invasion isn't an act of aggression against the whole world. It's a move to make parts of Ukraine decisively Russian, both culturally and politically. Obama initially warned that there would be "costs" to this invasion, but he won't back it up—he can't, not without a game of nuclear Russian roulette, which nobody wants.

The problem isn't that America and the UN will start tossing bombs into Russia; the problem is that Putin knows they *won't*. This is a man who once said that the fall of the Soviet Union was the "greatest geopolitical catastrophe of the 20th century," a viewpoint which harkens to the days of Stalin's Great Purge and Khrushchev's missile diplomacy with Cuba.

And Putin's already on round two. In 2008, when Putin was still Prime Minister, Russia and Georgia entered a five-day conflict that culminated in Russian bombs falling on the Georgian capital. Humanitarian groups around the world cried out, governments issued strict warnings for Russia to fall back, and nobody lifted an actual finger to stop it. At the end of it all, Russia calmly strolled back home and declared that Georgia had been "sufficiently punished." Each time this happens, Russia becomes more assured that the warnings of the rest of the world are just that—words, empty and hollow.

The situation in Ukraine may not be a match that's going to ignite the fires of World War III, but it's a nod to a superpower that they have a free license to do what they want. And if you give a mouse a cookie . . .

7 The Senkaku Island Dispute

Photo credit: Ministry of Land, Infrastructure, Transport and Tourism

Russia's not the only country setting the stage for World War III. As is the case with most important things, World War II didn't suddenly flash into existence; it edged its way into the world consciousness one little bit at a time, like a slowly rusting bicycle, until war was officially declared. While it's easy to put the conflict into the simplest terms, a lot of factors combined to make up what we now view as one war.

The years leading up to the war held a lot of indicators that, in hindsight, revealed aggressive countries testing the waters of what they could get away with. Japan, Italy, and Germany were all involved in minor conflicts that the League of Nations couldn't stop, such as Italy's invasion of Ethiopia in 1935 and Japan's chemical-infused invasion of China in 1937.

These days, China is reversing the balance by threatening an invasion of its own. The territory in question is a group of rocks known as the Senkaku islands, which are located in the East China Sea. The problem, of course, is that both China and Japan feel that the islands belong to them, and whoever controls the islands also controls shipping lanes, fishing waters, and a potential oil field.

China hasn't been the nicest neighbor recently. In November 2013, China startled the world by announcing a newly configured air defense zone in the East China Sea—a zone that they and they alone would control, to the point of shooting down aircraft that wandered into it. But, in addition to Japan, other regions originally had claim to that airspace, including Taiwan and South Korea.

Whether or not China was planning an invasion at that point, the Senkaku islands fall inside their “newly acquired” airspace, and now they're threatening to forcefully move Japan out of the area. Tensions have been building in the Pacific Rim for a while now, and if military action puts too much pressure on the skeleton of their current political disputes, bones could break.

And unlike the first two Sino-Japanese wars, this conflict could involve other countries in the region. South Korea quietly expanded their own airspace in December 2013, pushing back into territory that China had already claimed. Combined with both China and Japan aggressively rearming themselves in recent years, this territorial dispute has the potential to explode.

Photo credit: Gary Prill

A war only becomes a World War when the US gets involved. Unlike their official policy of stern warnings and disapproving looks in response to Russia, the White House has publicly and unwaveringly declared that it will back Japan against any acts of aggression by China.

With about 50 percent of its Naval force stationed in the Pacific, the US will also be in a position to help the Philippines if China continues pressing to the south. They're yet another country that has been affected by the airspace changes, and the US is legally bound to protect the Philippines based on the 1951 Mutual Defense Treaty.

This treaty doesn't even require anything as outright as a full-scale land invasion. The Philippines owns disputed islands within China's new airspace in the South China Sea (much like Japan claims to own the Senkaku islands). If China makes a move on any of those, the US Navy has to retaliate on their behalf, or they'll break the conditions of the treaty.

Photo credit: China News

But beneath it all, what do China's problems and Russia's problems have to do with each other?

Although they initially ended up on opposite sides of the conflict, Germany and the USSR went into World War II with a non-aggression pact, which lasted two years until Hitler ripped it up and sent Nazis onto Soviet ice.

With perhaps some similarities to that historic pact, China and Ukraine signed a nuclear security pact in December 2013. The conditions: China won't use any nuclear weapons against Ukraine, and if Ukraine is ever attacked by a nuclear force—or "threatened by such aggression"—China will provide Ukraine with security guarantees.

Why would China want to create such a pact with a country 5,800 kilometers (3,600 mi) away? And more importantly, with which government is China going to honor the pact? The past two months have seen a see-saw of political parties in control of Ukraine, but it's likely that China's involvement will be dependent on Yanukovich's politics, which are decidedly pro-Russian. He's the one who signed the pact. China says its relationship with Russia is warmer than ever, with China's *People Daily* describing it as "one of the most active power relationships [in the world]."

It's been speculated that Russia is hoping to draw a Western attack onto Ukraine, so that China's entry to back Ukraine will cement the alliance between China and Russia. That idea reeks of conspiracy theory. But with Russia's recent agreement to supply \$270 billion in oil supplies to China, and with the majority of Russia's pipelines running through Ukraine, China would want to protect its own interests. Either way, the enemy of an enemy is always a friend, and US-Russian relations are on very shaky ground.

Photo credit: Nisseth

While tension rises on the Eastern European front and Southeast Asia is mired in an explosive territorial dispute, rumors of war are also being whispered in the Middle East—specifically, Iran. But is Iran any real threat? Depending on the spin, it's easy to think so.

In January 2014, Iran dispatched a fleet of ships toward US national waters. The Senate has decided that unless military action is taken, Iran's nuclear development will continue unchecked. And on February 12, 2014, Iran's military chief answered that claim by declaring the country's willingness to go toe-to-toe with American forces, on land or at sea.

It sounds like a crisis in the making, but it's not as bad as it seems. Those "warships" were a rusty frigate and a supply boat, the White House in no way backs the Senate's bill, and while Iranian general Hassan Firouzabadi did threaten the US and the "Zionist regime" (Israel), it's worth remembering that they've done so plenty of times in the past.

Another point of contention is Iran's military force. Including paramilitaries, Iran states that they have 13.6 million people who can pick up a weapon at a moment's notice. While that number is probably exaggerated, it doesn't matter much anyway—World War III, if it happens, will be mostly an aerial war dependent more on long-range technologies than close-quarters combat. And that, surprisingly, is an example of why *not* to count Iran out of the picture. They have an air force of 30,000 men with several hundred aircraft, along with cruise missiles with a range of 2,000 kilometers (1,240 mi). That's plenty of range to hit US bases in the Gulf.

But most importantly, continued attention on Iran, Syria, and other Middle Eastern countries is spreading the West's foreign resources a little too thin, especially now that Russia won't be any help in that region.

North Korea tends to get relegated to the back row in discussions on world powers. They're potentially dangerous, sure, but it's a short-range type of danger, similar to the way you can still skip away from a mugger with a knife. But turn your back for too long, and that mugger can sneak up and give you some scars.

North Korea is still firing missiles in South Korea's direction for no good reason. The most recent launch was March 2, 2014; they fired more the week before that. With a range of about 500 kilometers (300 mi), the missiles won't reach far—just to, say, Japan. Or China. Or South Korea, or Russia. And since they're nestled right in the center of three of the biggest threats to peace at this time, they could—purposely or not—stir up something bigger than themselves, like dropping a starved weasel into a den of sleeping bears.

Most frightening of all, North Korea is building a nuclear arsenal. It's unlikely that they'll ever lead with a nuclear attack, but if there's enough chaos going on around them, it's not impossible that they'll try to slip one into the mix.

Photo credit: Watchdog Wire

World War I and World War II were very different from each other, but they had one striking similarity. Prior to each war, economic recessions hit several of the countries involved. World War II famously brought most of the world's economies back from the Great Depression, and World War I helped the US recover from a two-year recession that had already slowed trade by 20 percent. Correlation doesn't imply causation, but it's worth noting which economies recovered earlier than others, which may have had a huge impact on the way things turned out.

By 1933, Japan had taken moves to devalue its currency, which led to increased exports and a resulting growth in their economy. They pumped the extra money into weapons and munitions, which gave them a decided military advantage in the years leading up to the war. Germany, on the other hand, entirely crashed, which made the Nazi and Communist parties take similar steps and earn overwhelming support among the populace.

We're seeing some similarities today. While analysts are predicting yet another economic meltdown for Western countries, countries like Iran and Russia are looking to band together to boost their economies. Among other effects, that could lead to a second unit on Iran's nuclear plant; Germany's massive internal spending in the 1930s pulled it out of the Depression faster than America or the rest of Europe. And the global recession hit Russia less than much of the rest of the world, due in part to its exports of a quarter of the natural gas used by the entire European continent. And then there's China. The US government is close to \$17 trillion in debt, and China owns seven percent of that, or about \$1.19 trillion. China recently flew past Japan to become the world's second largest economy, and if it keeps growing at this rate, its GDP is going to match America's in about eight years. The risk is if China decides to dump the US debt. China would take a financial loss, but it could be a crippling blow to the US economy—and much of the world, since the US dollar is held in reserve by most foreign governments.

If China and the US do come to blows over the South China Sea, the US could eradicate the debt and pump the extra revenue into military spending—the exact same monetary flow that happened in World War II, only this time the guns are bigger.

But don't worry, it won't happen. Probably.

Easy LAMP (2014-06-24 17:14)

I found a Debian Distribution that preconfigured a LAMP.
The problem is there is no Nginx distrobution

Hillary Clinton's Saul Alinsky paper (2014-06-27 10:50)

"THERE IS ONLY THE FIGHT..."

An Analysis of the Alinsky Model

A thesis submitted in partial fulfillment of the requirements for the Bachelor of Arts degree under the Special Honors Program, Wellesley College, Wellesley, Massachusetts.

Hillary D. Rodham

Political Science

2 May, 1969

So here I am, in the middle way, having had twenty years—Twenty years largely wasted, the years of l'entre deux guerres Trying to learn to use words, and every attempt Is a wholly new start, and a different kind of failure

Because one has only learnt to get the better of words For the thing one no longer has to say, or the way in which

One is no longer disposed to say it. And so each venture Is a new beginning, a raid on the inarticulate

With shabby equipment always deteriorating In the general mass of imprecision of feeling,

Undisciplined squads of emotion. And what there is to conquer By strength and submission, has already been discovered Once or twice, or several times, by men whom one cannot hope To emulate—but there is no competition— There is only the fight to recover what has been lost And found and lost again and again : and now, under conditions That seem unpropitious. But perhaps neither gain nor loss For us, there is only the trying. The rest is not our business. T.S. Eliot, "East Coker"

ACKNOWLEDGEMENTS

Although I have no “loving wife” to thank for keeping the children away while I wrote, I do have many friends and teachers who have contributed to the process of thesis-writing. And I thank them for their tireless help and encouragement. In regard to the paper itself, there are three people who deserve special appreciation: Mr. Alinsky for providing a topic, sharing his time and offering me a job; Miss Alona E. Evans for her thoughtful questioning and careful editing that clarified fuzzy thinking and tortured prose; and Jan Krigbaum for her spirited intellectual companionship and typewriter rescue work.

CHAPTER I

SAUL DAVID ALINSKY: AN AMERICAN RADICAL

With customary British understatement, The Economist referred to Saul Alinsky as “that rare specimen, the successful radical.”

FOOTNOTE 1 (note— *all such numbers in the text refer to footnotes*)

This is one of the blander descriptions applied to Alinsky during a thirty year career in which epithets have been collected more regularly than paychecks. The epithets are not surprising as most people who deal with Alinsky need to categorize in order to handle him. It is far easier to cope with a man if, depending on ideological perspective, he is classified as a “crackpot” than to grapple with the substantive issues he presents.

For Saul Alinsky is more than a man who has created a particular approach to community organizing, he is the articulate proponent of what many consider to be a dangerous socio/political philosophy. An understanding of the “Alinsky-type method” (i.e. his organizing method) as well as the philosophy on which it is based must start with an understanding of the man himself.

Alinsky was born in a Chicago slum to Russian Jewish immigrant parents, and those early conditions of slum living and poverty in Chicago established the context of his ideas and mode of action. He traces his identification with the poor back to a home in the rear of a store where his idea of luxury was using the bathroom without a customer banging on the door.

2

Chicago itself has also greatly influenced him:

Where did I come from? Chicago. I can curse and hate the town but let anyone else do it and they're in for a battle, There I've had the happiest and the worst times of my life. Every street has its personal joy and pain to me. On this street is the church of a Catholic Bishop who was a big part of my life; further down is another church where the pastor too has meant a lot to me; and a couple miles away is a cemetery—well, skip it. Many Chicago streets are pieces of my life and work. Things that happened here have rocked a lot of boats in a lot of cities. Nowadays I fly all over the country in the course of my work. But when those flaps go down over the Chicago skyline, I knew I'm home. (all boldface type indicates blockquoting)

3

Although Alinsky calls Chicago his “city”, the place really represents to him the American Dream—in all its nightmare and its glory.

He lived the Dream as he moved from the Chicago slums to California then back to attend the University of Chicago. Alinsky credits his developing an active imagination, which is essential for a good organizer, to his majoring in archaeology. An imagination focusing on Inca artifacts, however, needs exposure to social problems before it can become useful in community organizing. Exposure began for Alinsky when he and other students collected food for the starving coal miners in southern Illinois who were rebelling against John L. Lewis and the United Mine Workers.

Lewis became a role model for Alinsky who learned about labor's organizational

tactics from watching and working with Lewis during the early years of the CIO. Alinsky soon recognized that one of the hardest jobs of the leader is an imaginative one as he struggles to develop a rationale for spontaneous action:

For instance, when the first sit-down strikes took place in Flint, no one really planned them. They were clearly a violation of the law—trespassing, seizure of private property. Labor leaders ran for cover, refused to comment. But Lewis issued a pontifical statement, ‘a man’s right to a job transcends the right of private property,’ which sounded plausible.

4

After graduating from the University of Chicago, Alinsky received a fellowship in criminology with a first assignment to get a look at crime from the inside of gangs. He attached himself to the Capone gang, attaining a perspective from which he viewed the gang as a huge quasi-public utility serving the people of Chicago. Alinsky’s eclectic life during the thirties, working with gangs, raising money for the International Brigade, publicizing the plight of the Southern share cropper, fighting for public housing, reached a turning point in 1938 when he was offered the job as head of probation and parole for the City of Philadelphia. Security. Prestige. Money. Each of these inducements alone has been enough to turn many a lean and hungry agitator into a well-fed establishmentarian.

Alinsky rejected the offer and its triple threat for a career of organizing the poor to help themselves. His first target zone was the Back of the Yards area in Chicago; the immediate impetus was his intense hatred of fascism:

...I went into ‘Back of the Yards’ in Chicago. This was Upton Sinclair’s ‘Jungle.’ This was not the slum across the tracks. This was the slum across the tracks from across the tracks. Also, this was the heart, in Chicago, of all the native fascist movements— the Coughlinites, the Silver Shirts, the Pelley movement... I went in there to fight fascism. If you had asked me then what my profession was, I would have told you I was a professional antifascist.

5

Alinsky’s anti-fascism, built around anti-authoritarianism, anti-racial superiority, anti-oppression, was the ideological justification for his move into organizing and the first social basis on which he began constructing his theory of action. Working in Chicago and other communities between 1938 and 1946 Alinsky refined his methods and expanded his theory. Then in 1946, Alinsky’s first book, *Reveille for Radicals*, was published. Since Alinsky is firstly an activist and secondly a theoretician, more than one-half the book is concerned with the tactics of building “People’s Organizations.”

There are chapter discussions of “Native Leadership,” “Community Traditions and Organizations,” “Conflict Tactics,” “Popular Education,” and “Psychological Observations on Mass Organizations.” The book begins by asking the question: What is a Radical?

This is a basic question for Alinsky who proudly refers to himself as a radical. His answer is prefaced by pages of Fourth-of-July rhetoric about Americans: “They are a people creating a new bridge of mankind in between the past of narrow nationalistic chauvinism and the horizon of a new mankind— a people of the world.”

6

Although the book was written right after World War II, which deeply affected Alinsky, his belief in American democracy has deep historical roots—at least, as he interprets history:

The American people were, in the beginning, Revolutionaries and Tories. The American People ever since have been Revolutionaries and Tories...regardless of the labels of the past and present... The clash of Radicals, Conservatives, and Liberals which makes up America’s political history opens the door to the most fundamental question of What is America? How do the people of America feel? There were and are a number of Americans—few, to be sure— filled with deep feelings for people. They know that people are the stuff that makes up the dream of democracy. These few were and are the American Radicals and the only way we can understand the American Radical is to understand what we mean by this feeling for and with the people.

7

What Alinsky means by this “feeling for and with the people” is simply how much one person really cares about people unlike himself. He illustrates the feeling by a series of examples in which he poses questions such as: So

you are a white, native-born Protestant. Do you like people? He then proceeds to demonstrate how, in spite of protestations, the Protestant (or the Irish Catholic or the Jew or the Negro or the Mexican) only pays lip service to the idea of equality. This technique of confrontation in Alinsky's writing effectively involves most of his readers who will recognize in themselves at least one of the characteristics he denounces. Having confronted his readers with their hypocrisy, Alinsky defines the American Radical as "...that unique person who actually believes what he says...to whom the common good is the greatest value...who genuinely and completely believes in mankind...."

8

Alinsky outlines American history focusing on men he would call "radical," confronting his readers again with the Alinsky outlines American history focusing on men he would call "radical," confronting his readers again with the "unique" way Americans have synthesized the alien roots of radicalism, Marxism, Utopian socialism, syndicalism, the French Revolution, with their own conditions and experiences:

Where are the American Radicals? They were with Patrick Henry in the Virginia Hall of Burgesses; they were with Sam Adams in Boston; they were with that peer of all American Radicals, Tom Paine, from the distribution of Common Sense through those dark days of the American Revolution... The American Radicals were in the colonies grimly forcing the addition of the Bill of Rights to our Constitution.

They stood at the side of Tom Jefferson in the first big battle between the Tories of Hamilton and the American people. They founded and fought in the LocoFocos. They were in the first union strike in America and they fought for the distribution of the western lands to the masses of people instead of the few...They were in the shadows of the underground railroad and they openly rode in the sunlight with John Brown to Harpers Ferry...They were with Horace Mann fighting for the extension of educational opportunities...They built the American Labor movement... Many of their deeds are not and never will be recorded in America's history.

They were among the grimy men in the dust bowl, they sweated with the share croppers. They were at the side of the Okies facing the California vigilantes. They stood and stand before the fury of lynching mobs. They were and are on the picket lines gazing unflinchingly at the threatening, flushed, angry faces of the police. American Radicals are to be found wherever and whenever America moves closer to the fulfillment of its democratic dream. Whenever America's hearts are breaking, these American Radicals were and are. America was begun by its Radicals. The hope and future of America lies with its Radicals.

9

Words such as these coupled with his compelling personality enabled Alinsky to hold a sidewalk seminar during the 1968 Democratic Party Convention in Chicago. He socratically gathered around him a group of young demonstrators on the corner of Michigan and Bilbo on Monday night telling them that they were another generation of American Radicals.

10

Alinsky attempts to encompass all those worthy of his description "radical" into an ideological Weltanschauung:

What does the Radical want? He wants a world in which the worth of the individual is recognized...a world based on the morality of mankind...The Radical believes that all peoples should have a high standard of food, housing, and health...The Radical places human rights far above property rights. He is for universal, free public education and recognizes this as fundamental to the democratic way of life...Democracy to him is working from the bottom up...The Radical believes completely in real equality of opportunity for all peoples regardless of race, color, or creed.

11

Much of what Alinsky professes does not sound "radical." His are the words used in our schools and churches, by our parents and their friends, by our peers. The difference is that Alinsky really believes in them and recognizes the necessity of changing the present structures of our lives in order to realize them.

There are many inconsistencies in Alinsky's thought which he himself recognizes and dismisses. He believes that life is inconsistent and that one needs flexibility in dealing with its many facets. His writings reflect the flavor of inconsistency which permeates his approach to organizing. They also suggest Alinsky's place in the American Radical tradition.

In order to discuss his place, it is necessary to circumvent his definition of "radical" based on inner psychological strength and commitment, and to consider more conventional uses of the term. Although there is great disagreement among writers about the definition of "radical" and among radicals themselves over the scope of the word's meaning, there is sufficient agreement to permit a general definition.

A radical is one who advocates sweeping changes in the existing laws and methods of government. These proposed changes are aimed at the roots of political problems which in Marxian terms are the attitudes and the behaviors of men. Radicals are not interested in ameliorating the symptoms of decay but in drastically altering the causes of societal conditions. Radicalism "emphasizes reason rather than reverence, although Radicals have often been the most emotional and least reasonable of men."

12

One of the strongest strains in modern radicalism is the eighteenth century Enlightenment's faith in human reason and the possible perfectibility of man. This faith in the continuing improvement of man was and is dominated by values derived from the French and American Revolutions and profoundly influenced by the Industrial Revolution.

The Industrial Revolution shifted the emphasis of radicalism to an urban orientation. Alinsky holds to the basic radical tenets of equality and to the urban orientation, but he does not advocate immediate change. He is too much in the world right now to allow himself the luxury of symbolic suicide. He realizes that radical goals have to be achieved often by non-radical, even "anti-radical" means. For Alinsky, the non-radical means involve the traditional quest for power to change existing situations. To further understand Alinsky's radicalism one must examine his attitude toward the use of power. The key word for an Alinsky-type organizing effort is "power." As he says: "No individual or organization can negotiate without power to compel negotiations."

13

The question is how one acquires power, and Alinsky's answer is through organization: "To attempt to operate on good will rather than on a power basis would be to attempt something which the world has never yet experienced—remember to make even good will effective it must be mobilized into a power unit."

14

One of the problems with advocating mobilization for power is the popular distrust of amassing power. Americans, as John Kenneth Galbraith points out in *American Capitalism*, are caught in a paradox regarding their view toward power because it "obviously presents awkward problems for a community which abhors its existence, disavows its possession, but values its existence."

15

Alinsky recognizes this paradox and cautions against allowing our tongues to trap our minds:

We have become involved in bypaths of confusion or semantics... The word 'power' has through time acquired overtones of sinister corrupt evil, unhealthy immoral Machiavellianism, and a general phantasmagoria of the nether regions.

16

For Alinsky, power is the "very essence of life, the dynamic of life" and is found in "...active citizen participation pulsing upward providing a unified strength for a common purpose of organization...either changing circumstances or opposing change."

17

Alinsky argues that those who wish to change circumstances must develop a mass-based organization and be prepared for conflict.

He is a neo-Hobbesian who objects to the consensual mystique surrounding political processes; for him, conflict is the route to power. Those possessing power want to retain it and often to extend the bounds of it. Those desiring a change in the power balance generally lack the established criteria of money or status and so must mobilize numbers.

Mobilized groups representing opposed interests will naturally be in conflict which Alinsky considers a healthful and necessary aspect of a community organizing activity. He is supported in his prognosis by conflict analysts such as Lewis Coser who points out in *The Functions of Social Conflict* that:

Conflict with other groups contributes to the establishment and reaffirmation of the group and maintains its boundaries against the surrounding social world.

18

In order to achieve a world without bounds it appears essential for many groups to solidify their identities both in relation to their own membership and to their external environment. This has been the rationale of nationalist groups historically and among American blacks presently. The organizer plays a significant role in precipitating and directing a community's conflict pattern. As Alinsky views this role, the organizer is

...dedicated to changing the character of life of a particular community [and] has an initial function of serving as an abrasive agent to rub raw the resentments of the people of the community; to fan latent hostilities of many of the people to the point of overt expressions... to provide a channel into which they can pour their frustration of the past; to create a mechanism which can drain off underlying guilt for having accepted the previous situation for so long a time. When those who represent the status quo label you [i.e. the community organizer] as an 'agitator' they are completely correct, for that is, in one word, your function—to agitate to the point of conflict.

19

An approach advocating conflict has produced strong reactions. Some of his critics compare Alinsky's tactics with those of various hate groups such as lynch mobs which also "rub raw the resentments of the people."

20

Alinsky answers such criticism by reminding his critics that the difference between a "liberal" and a "radical" is that the liberal refuses to fight for the goals he professes. During his first organizing venture in *Back of the Yards* he ran into opposition from many liberals who, although agreeing with his goals, repudiated his tactics. They wore according to Alinsky "like the folks during the American Revolution who said 'America should be free but not through bloodshed.'"

21

When the residents of *Back of the Yards* battled the huge meat-packing concerns, they were fighting for their jobs and for their lives. Unfortunately, the war-like rhetoric can obscure the constructiveness of the conflict Alinsky orchestrates. In addition to aiding in formation of identity, conflict between groups plays a creative social role by providing a process through which diverse interests are adjusted.

To induce conflict is a risk because there is no guarantee that it will remain controllable. Alinsky recognizes the risk he takes but believes it is worth the gamble if the conflict process results in the restructuring of relationships so as to permit the enjoyment of greater freedom among men meeting as equals. Only through social equality can men determine the structure of their own social arrangements. The concept of social equality is a part of Alinsky's social morality that assumes all individuals and nations act first to preserve their own interests and then rationalize any action as idealistic. He thinks it is only through accepting ourselves as we "really" are that we can begin to practice "real" morality:

There are two roads to everything—a low road and a high one. The high road is the easiest. You just talk principles and be angelic regarding things you don't practice. The low road is the harder. It is the task of making one's self-interest behavior moral behavior. We have behaved morally in the world in the past few years because we want the people of the world on our side. When you get a good moral position, look behind it to see what is self-interest.

22

The cynicism of this viewpoint was mitigated somewhat by my discussing the question of morality with Alinsky who conceded that idealism can parallel self-interest. But he believes that the man who intends to act in the world as- it-is must not be misled by illusions of the world-as-we-would-like-it-to be.

23

Alinsky claims a position of moral relativism, but his moral context is stabilized by a belief in the eventual manifestation of the goodness of man. He believes that if men were allowed to live free from fear and want they would live in peace. He also believes that only men with a sense of their own worth and a respect for the commonality of humanity will be able to create this new world.

Therefore, the main driving force behind his push for organization is the effect that belonging to a group working for a common purpose has had on the men he has organized. Frustration is transformed into confidence when men recognize their capability for contribution. The sense of dignity is particularly crucial in organizational activity among the poor whom Alinsky warns to beware of programs which attack only their economic poverty.

Welfare programs since the New Deal have neither redeveloped poverty areas nor even catalyzed the poor into helping themselves. A cycle of dependency has been created which ensnares its victims into resignation and apathy. To dramatize his warning to the poor, Alinsky proposed sending Negroes dressed in African tribal costumes to greet VISTA volunteers arriving in Chicago. This action would have dramatized what he refers to as the "colonialism" and the "Peace Corps mentality" of the poverty program.

24

Alinsky is interested in people helping themselves without the ineffective interference from welfarephiles. Charles Silberman in his book, *Crisis in Black and White* describes Alinsky's motivation in terms of his faith in People:

The essential difference between Alinsky and his enemies is that Alinsky really believes in democracy; he really believes that the helpless, the poor, the badly-educated can solve their own problems if given the chance and the means; he really believes that the poor and uneducated, no less that the rich and educated, have the right to decide how their lives should be run and what services should be offered to them instead of being ministered to like children.

25

This faith in democracy and in the people's ability to "make it" is peculiarly American and many might doubt its radicalness. Yet, Alinsky's belief and devotion is radical; democracy is still a radical idea in a world where we often confuse images with realities, words with actions. Alinsky's belief in self-interested democracy unifies his views on the use of the power/conflict model in organizing and the position of morality and welfare in the philosophy underlying his methodology.

IN NOVEMBER 2012 a stone monument inscribed with the Ten Commandments was placed on the grounds of Oklahoma's state capitol. Seven years earlier, in *Van Orden v Perry*, the United States Supreme Court ruled that a Ten Commandments monument placed on the Texas state capitol grounds did not violate the First Amendment's clause forbidding government from making any law "respecting the establishment of religion". But now other religions want in too: in December the Satanic Temple launched a campaign to place a monument of its own next to the Ten Commandments, reasoning that it would give Oklahomans "the opportunity to show that they espouse the basic freedoms spelled out in the Constitution". They wanted to raise \$20,000 by January 18th; they have already surpassed that goal. On Monday, they unveiled their monument's design (pictured): a winged creature with the torso of a man, the head of a goat and horns sits on a throne beneath a Pentagram, two fingers sagely raised as two tow-headed children look on in wonder. Satanists, it seems, have a sense of humour. But what do they actually believe?

That turns out to be a difficult question to answer. You will be unsurprised to hear that Satanists are a rather fractious bunch, with many different organisations, beliefs and rituals. Many of these organisations are wholly or partly occult, with much hidden from non-adherents. Some are spiritualists: they worship Satan as a deity. Adherents of the Joy of Satan Ministries, for instance, "know Satan/Lucifer as a real being", and believe he is "the True Father and Creator God of humanity". Others—notably the Church of Satan, founded by Anton LaVey, the most renowned occultist since Alesteir Crowley; and the Satanic Temple—are materialist, and reject belief in supernatural beings. Lucien Greaves, a spokesman for the Satanic Temple, describes himself as "an atheist when it comes to supernatural beliefs", and says that for him Satanism stands for "individual sovereignty in the face of tyranny, and the pursuit of knowledge even when that knowledge is dangerous." LaVey's "Satanic Bible" proclaims "Life is the great indulgence—death the great abstinence! Therefore make the most of the HERE AND NOW!...Choose ye this day, this hour, for no redeemer liveth!" Despite these differences, certain commonalities link many spiritual and materialist branches of Satanism: namely a belief that the worship of a supernatural deity—and the ecclesiastical structure that evolved to support such worship—places needless restrictions on human knowledge and progress; and a belief in science, rationality and learning, without restrictions. Peter Gilmore, LaVey's successor as head of the Church of Satan, distinguishes between "carnal

people and spiritual people”: he believes the latter need a “spooky daddy in the sky”, whereas he is “happy being the center of [his] universe”. In this sense, materialist Satanism seems close to, if not indistinguishable from, organised atheism, or perhaps atheism with rituals. But Mr Gilmore says his church uses Satan in the original Hebrew sense as “The Adversary”—“a figure who will stand up and challenge”. Satan in this sense becomes a sort of literary figure or metonymy for challenging orthodoxy, rather than an evil or bloodthirsty god.

All of this is considerably less headline-grabbing than animal sacrifice or ritual murder. And, of course, some have been convicted of horrific acts nominally committed for or connected with Satan. But these are hardly the first murders committed in a religion’s name, nor is there any evidence to suggest that these killers are more representative of Satanism than other religiously-inspired killers are of their faiths. Yet somehow one imagines that such arguments will fail to sway Oklahoma’s legislators into allowing a giant, goat-headed, pentagrammed statue to sit next to a monument of the Ten Commandments.

how to fix NASCAR decline (2014-07-06 18:06)

Aaaaaaaaand, we're back! In my earlier post, which can be found [here](#), I discussed three major challenges facing NASCAR as it struggles to grow in this post-recession world. Beset by (1) the rise of corporate molded personalities such as 5 time champion Jimmie Johnson, (2) poor quality racing, and (3) bad broadcasts and commentating by networks such as TNT, NASCAR has stagnated. Track attendance is down. In 2012, no NASCAR races were sellouts. Television ratings have remained flat throughout the last 5 years, in stark contrast to the late '90s and early 2000s, when ratings grew 5 to 10 % every season. I've already examined 3 problems facing NASCAR. Today I look at two more issues that threaten the sport's future.

4. Nascar has an image problem

Stock car racing is consistently one of the top three most watched sports in America, beating almost every major sporting league except the NFL in the ratings. However, Nascar's exposure in the news media is minimal. On ESPN's popular SportsCenter program, Nascar is talked about for at most five minutes in the course of an hour long TV show. In the New York Times Sports Section, which I'm using as an example because it's the only paper I get, stock car races are lucky to get a two paragraph write up buried under the box scores. Midseason college basketball, youth soccer competitions, and national swimming championships all get more press and exposure than Nascar. And this is a problem. Nascar can't attract new fans and new audiences if it has no exposure in the media. No one will get hooked on Nascar by reading a four sentence blurb about last week's race.

Pictured: More popular than NASCAR?

If Nascar has a problem getting exposure, then it also has a problem with its image. Nascar is looked down upon by many, most of whom have never even seen an actual race. It's perceived as a borefest where cars do nothing but go around in circles for hours on end. The drivers are seen as out-of-shape rednecks who sit in a car for a living. Many don't even consider Nascar to be a real sport. And this is not true. Being a race car driver requires better hand-eye coordination than basketball, boxing, or football, better reactions and judgement than baseball, cycling, or martial arts, and more nerve than just about any other sport. Yet, people still hold Nascar in disdain, refusing to attend an event or to watch a race on TV. This perception needs to change, or else Nascar will have serious trouble with attracting new fans and increasing its ratings.

5. The Economy

Many of Nascar's woes can be traced back to the economic troubles that the United States is going through. People all across the country are experiencing money problems, and this directly impacts their habits concerning Nascar. People can't afford to pay for high-priced tickets to Nascar events. The cost of the gas needed to travel to the tracks also turns many people away from the sport. People can't afford to take vacations and spend long weekends at a Nascar track. If they take time off, they'll be perceived as slacking and will be the first to go if a new round of layoffs hit. The Great Recession has put a major dent in Nascar's ticket sales and attendance records. However, the silver lining in this is that the American economy will eventually recover. America will bounce back, and when it does, once again prosperous race fans will be able to spend the money needed to attend races. Nascar just needs to ride the economic crisis out, and eventually it will come out on top.

Nascar is experiencing many problems, and as a result its viewership is in decline. But these problems are not fatal. They do not spell the death of this great American sport. How can Nascar fix its issues and surge to the top once again? Stay tuned to find out.

To read about how these problems can be fixed, [click here](#).

NASCAR was once one of America's most popular sports. In the late '90s and the early 2000s, NASCAR saw an unprecedented growth in popularity and TV ratings. NASCAR's meteoric rise was fed by the rise of Jeff Gordon, whom many consider to be NASCAR's first superstar, and the death of legend Dale Earnhardt Sr. However, in recent years that growth has slowed. Bland drivers, storylines, and racing have sent NASCAR's TV ratings into a tailspin. They have also been responsible for steadily declining attendance at NASCAR races. NASCAR is in danger of fading into irrelevance if it does not do something to revitalize its growth and make it once again America's fastest growing sport.

Over the past few years, multiple problems have beset NASCAR racing. Here are some of the biggest ones.

1. The rise of Jimmie Johnson

Jimmie Johnson has accomplished a feat no one ever thought possible. From 2006-2010, Johnson won five straight Sprint Cup Championships. His domination of the sport has actually been one of the main reasons for its decline. These five title chases were some of the most boring in modern NASCAR history. Aside from 2007, in which Johnson was met with a stiff challenge from Jeff Gordon, and in 2010, when Johnson came from behind to beat Denny Hamlin for the title, all of Johnson's title chases have been fairly boring. The outcome of the season was never in doubt. Like Dale Earnhardt's domination of the sport in the early '90s, and Jeff Gordon's spate of championships from 1995-2001, Johnson's winning streak should have been a boon for NASCAR—a fresh face on top of the sport. However, people have instead turned away from the sport because of Jimmie. Jimmie just isn't that likable. He's a wonderful person and a class act on the track, but he is not very charismatic or interesting. Jimmie is seen by many fans as having a corporate-molded persona. To them, Johnson is just one more slick average character in a sea of similar faces. Having such a bland person as the face of NASCAR is not what the sport needs. But with Jimmie, that's what has happened. Shot by The Daredevil at Daytona during Speedw...

NASCAR champion Dale Earnhardt

2. Poor racing

The quality of NASCAR racing has declined in recent years. Fans and drivers alike have complained about new tracks and new cars that make it difficult to pass. Many argue that the quality of racing has declined—fans are now subjected to long periods of green flag racing where the drivers ride around the track in single files. Others complain about the tracks. Most of the tracks recently added to the NASCAR circuit have been 1.5 mile ovals. Critics have charged that these cookie cutter tracks are too similar and that all result in lethargic racing. Whatever the reason, the excitement in NASCAR has slowed, and that has been reflected by the drop-off in TV ratings.

Single file racing

But a lack of passing is not the only reason that fans have been turned away. Fuel mileage races, in which victory comes down to who can last the longest on a tank of gas rather than who drives the fastest, have become more and more common. In 2011, for example, virtually every single race on a 1.5 mile track came down to who could finish the race without running out of gas. Fuel mileage racing takes away the action associated with a race and adds a sense of boredom to what is normally the most exciting part of a race—the finish.

3. Bad broadcasting

Sometimes, when covering a sport, a good announcer can keep you on the edge of your seat, completely engaged in what you're watching, even if the event isn't exactly a thriller. This has not been the case with NASCAR. NASCAR broadcasters, especially those on TNT, are known for providing decidedly dull coverage of races.

Let's compare. In August 2012, I was watching a Formula 1 race, the Belgian Grand Prix. The race was won by Jenson Button, who led every lap and finished 13 seconds ahead of 2nd place Sebastian Vettel. The outcome was never in doubt. And yet, that Grand Prix was one of the most exciting races I've ever watched on TV. The camera crew was excellent, showing close ups of intense action and racing happening all around the track. The announcers were exciting, providing fast-paced calls and interesting color commentary.

Jenson Button in 2011

Jenson Button in 2011

Now let's compare a NASCAR race on TNT—namely, last summer's race at the Infineon Raceway, one of only two non-oval tracks on the NASCAR circuit. This broadcast epitomized the TV troubles NASCAR has been having. The announcers were uninteresting, spending more time discussing their new in-car cameras than they did actually talking about the racing. There were long pauses as they frequently contradicted each other as to what was going on during the race. At the same time they missed some great battles for position on the racetrack. The broadcast was bad. TNT turned a great race into a snoozer.

NASCAR has problems, and these problems are hurting its popularity. TV ratings are down. Ticket sales are down. Merchandise sales are down. NASCAR is down. But it's not out. The sport can fix and recover from these problems. But it will have to make some major changes in order to survive. How can NASCAR come surging back? Stay tuned to find out.

Earlier, in part 1 and part 2 of this story, I discussed the problems that are facing Nascar. And there are plenty. The

sport faces plunging attendance, declining TV viewership, and fans who see lethargic racing, boring drivers, and a lack of excitement. These problems, although serious, do not spell the death of Nascar. But how can Nascar fix these problems? Well, you'll see here.

1. Better cars

jamiemaccarl

The new cars (shown on the right) have more brand identity

The much reviled Car of Tomorrow, which was introduced in 2007 and quickly became the subject of unilateral hate, has been phased out of Nascar. Starting this season, the new Gen-6 cars have been introduced into the sport. And what a difference they have made! The new cars immediately got a positive reaction from the fans. They are much more aesthetically pleasing and look more like their street counterparts. All of the Car of Tomorrow models looked exactly the same. The cars have also led to more exciting racing. The races in California, Las Vegas, and New Hampshire were all much more exciting than they had been in years. However, Nascar still has some work today. Lethargic follow-the-leader racing still persists at tracks such as the Charlotte Motor Speedway, and Daytona and Talladega featured long stretches of double-file racing where virtually no passing occurred. Gone are the days when a driver could charge to the front of the field in just a few laps. An improved aero package for the superspeedways would go a long way to rectifying this.

2. TV deal

Nascar has made agreements to have its races broadcast on FOX, TNT, and ESPN throughout the season. The TNT and ESPN deals come up for renewal at the end of the 2014 season. Renewing these deals, especially the agreement with TNT, would hurt Nascar and decrease its viewership. TNT consistently puts out poor quality, commercial filled broadcasts that turn even the most exciting races into snoozefests. NBC and CBS are reportedly interested in broadcasting races. Nascar would be well-advised to consider their offers. In order to gain more exposure, Nascar races need to be broadcasted on major networks like NBC and CBS, not on cable channels like TNT and ESPN. I mean, who really watches TNT?

3. Stopping Jimmie Johnson

Jimmie Johnson has won five straight championships. Take a moment to digest that. In any other sport, or even with any other driver, his accomplishment would be celebrated, revered even. The only other teams that have done this are the 1950's Yankees, the 1960's Celtics, and the 1950's Montreal Canadiens. That's it. And yet, when people talk about Johnson's achievement, it is not with reverence or with awe. His streak is talked about with utter disgust. By many, Johnson is considered a bland and boring driver. His consistent performance is driving fans away from the sport. So, what can Nascar do to stop this?

First of all, they can Jimmie-proof the Chase, much like the PGA tour did after the rise of Tiger Woods. The PGA deliberately made their courses harder, adjusting tee-off spots and hole placements in order to ensure parity and make the courses more difficult for Tiger. Now, obviously Nascar doesn't have the ability to change the layout of their tracks, but they do have the ability to change the schedule. If Nascar were to take out Chase tracks that Jimmie performs well at, such as Martinsville, Phoenix, Kansas, or Dover, and replace them with tracks where he consistently performs poorly, such as Bristol, Watkins Glen, or Richmond, it would go a long way towards stopping Jimmie's dominance. Upping the scrutiny on Johnson's cars would also help Nascar hold back the 48. More incidents like at New Hampshire, where Jimmie was sent to the back of the field after he failed post-qualifying inspection, would put a damper on the 48's success.

4. Better racing

This fix is fairly simple. Fans and sportswriters alike have complained about the high volume of intermediate, cookie cutter tracks, and with good reason. Nascar races at 1.5 mile ovals such as Texas, Las Vegas, and Atlanta often feature long boring stretches of single file racing. There are on average only two caution flags for crashes per race. Races are often won and lost by strategy calls on top of the pit box, rather than by a great move on the track. Coincidentally (or perhaps not), Jimmie Johnson is often at his best on these tracks. The solution? Move races away from these cookie cutter raceways. Replace them with road course events, or short tracks. Another superspeedway race like Talladega would be a good idea as well. Nascar should even consider hosting a race on a dirt track. The Mudsummer Classic at Eldora Speedway (7 ET, July 24 on SPEED), has already generated an insane amount of interest—and that's just a Truck Series race! It featured great racing and some of the best storylines of the year. It doesn't matter where

Nascar moves its races. It just needs to move them away from the 1.5 mile cookie cutters.

5. The economy

Many Nascar fans have stopped coming to races because of the economy. They simply can't afford it. Aside from reducing the cost of its tickets, there's not much that Nascar can do to stop this. Nascar just needs to ride the recession out. When the economy improves, so will ticket sales.

Grams Search engine and secret Wikis (2014-07-10 21:21)

I learned of a secret search engine called Grams that is accessed through the Tor Web browser. There is also a Onion alternative to wikipedia called "The Hidden Wiki" Onion sites can only be seen in the Tor web browser, a modified Firefox browser. The onion is for all the black markets. There are other .onion sites besides black markets.

Speaker John Boehner's Task Force Letter (2014-07-18 04:01)

Page Two

because I believe those are the key issues that will determine the outcome of close House races in November.

I know you understand what is at stake in 2014. Losing is not an option. And I am hoping your input and support will help focus our efforts to elect and reelect Republicans to the U.S. House of Representatives this November.

The outcome of this year's battle for control of the U.S. House of Representatives will directly impact whether or not President Obama finishes his term in the White House with complete control of Washington.

Remember, our House Majority is the last line of defense. We're all that's keeping President Obama and his Democrat allies from raising taxes, increasing spending, expanding ObamaCare, enacting extreme gun control legislation, and more.

The Speaker's Task Force will do everything possible to maintain our House Majority as a firewall against the President's liberal agenda.

But the goal of the Speaker's Task Force is to not just lead our Party's grassroots campaign to *maintain* a Republican Majority in 2014...

...The Task Force is going all-out to *expand and grow* our Majority NOW to strengthen our push for common-sense conservative solutions for a stronger economy and a brighter future.

Because we can't just be the opposition party here in President Obama's Washington - we have to be the *alternative* party. It's the best way to ensure that Republicans are well positioned to take back the White House in 2016.

That's why having you accept your Charter Membership in the Speaker's Task Force today is so important.

I am asking you to make a commitment to helping *expand our Majority* in 2014 because a stronger Republican House is key to the future of our Party, and our country.

I think you'll agree that the damage done to our economy, security and liberty by this administration's actions, policies and lack of leadership is not going to get undone and turned around overnight.

We need to continue to work from the ground up to grow our Party and get our nation back on track. The work of the Speaker's Task Force is part of this ongoing effort.

The Task Force will serve as the highest level of grassroots membership within the

(Next page, please)

Page Three

NRCC, helping keep me in touch with local issues and helping the NRCC set the direction of our Party's national campaign to elect more Republicans to the U.S. House of Representatives.

To recognize the special role that the Speaker's Task Force has in support of our Republican House Leadership Team, those who accept Charter Membership will receive a unique set of benefits designed especially for them.

As a Charter Member of the Speaker's Task Force you will receive special access to conference calls with members of the Republican Leadership team, exclusive Task Force members only emails, a unique Speaker's Gavel insignia pin and a VIP invitation to the NRCC Annual Dinner in Washington, D.C.

Of course the greatest benefit of accepting Charter Membership in the Speaker's Task Force is knowing you are going above and beyond normal NRCC Membership to help not just protect our House Majority, but to EXPAND the size of our Majority.

We are going to take the fight to the Democrats in every competitive House District all across the country.

I want to make sure voters know that Republicans are offering common-sense solutions to create jobs, lower health care costs, increase American energy production, and bring accountability and reform to the broken Department of Veterans Affairs.

The more people learn about our solutions to put an end to the ObamaCare debacle and lift our economy out of this 'new normal' of stagnant growth and high unemployment, the more people will rally behind House Republican candidates this November.

The Speaker's Task Force is going to lead our efforts to rally Republicans, Independents and even disillusioned Democrats all across the country behind our conservative House candidates.

I am asking you to accept a large responsibility by becoming a Charter Member in the Speaker's Task Force. With this comes an expanded financial commitment as well.

Normally Charter Membership would require an annual contribution of \$120, but because we are launching the Speaker's Task Force in the middle of the election year to build momentum to EXPAND our Republican House Majority, we are only requiring a contribution of \$60 during 2014.

So please complete your Speaker's Task Force Charter Member RSVP form and return it to me via the NRCC in the postage-paid envelope provided for your use, along with a check or credit card information for a contribution of \$60 for your full commitment. Or if you like, you can include just \$30 with a pledge to send another \$30 before Election Day to complete your

(Over, please)

Page Four

Charter Membership

I want everyone who believes in the work our House Majority is doing and understands the importance of expanding the number of Republicans in Congress this November, to have a chance to serve on this Task Force...

So no matter how much you can spare today, please include a contribution of even \$15 or \$20 along with your RSVP and I will trust you to send the rest of your Charter Member commitment when you can.

Once the NRCC receives your RSVP and contribution, we will rush your support into the field to help reinforce our House candidates and aggressively go after the Democrats with the TRUTH about their record of passing and defending President Obama's failed liberal policies and programs.

Thank you in advance for coming forward to accept your Charter Membership in the Speaker's Task Force. I look forward to working closely with you in the coming weeks.

Sincerely,

John Boehner
Speaker of the House

P.S.

I am offering you Charter Membership in the Speaker's Task Force because I urgently need your help to raise the funds our Party needs to go on the offensive and take the fight to Democrats so we can expand our Republican House Majority this November. Please accept this invitation by returning the enclosed Charter Member RSVP form within the next 7 days along with a contribution of \$60, \$30, \$20 or even \$15. A postage-paid envelope is provided for your use. Thank you again for all you do for our Party and our country.

My First H265 encode (2014-07-19 18:08)

My H265 mp4 runs with free Windows Media Player plugin However, I highly recommend VLC Player, because Windows Media Player may freeze up.

H265 still too new for youtube. Unlike H264, this H265 encoder **completely fails for an entire 4 seconds** in the 8 minute video and produces lots of blocks. However, the remaining 7 minutes and 56 seconds look nicer than H264 version.

Better Percentage of Xbox One games in 1080p (2014-07-31 03:53)

Microsoft's DirectX 12 update for Xbox One will improve graphics and run videogames at 1080p. Currently, some Xbox One games have been running at 720p. Xbox One's AAA titles have 1080p .

Any DirectX 11 GPU is compatible with DirectX 12's parallel multi-core CPU feature to improve the frame rates of PC games for free. However, is there still a PC game worth buying when consoles have a better return on investment? My last PC game was Diablo 3 Reaper of Souls from a few months ago and that's because I played Diablo 2 Lord of Destruction in high school. Playing Diablo 2 was a fad at the time.

16.8 August**Mining Bitcoins with advanced Radeon or Geforce GPUs (2014-08-01 02:37)**

Mining bitcoins – a process that helps manage bitcoin transactions as well as create new “wealth” – is the new Beanie Babies. Luckily for us, however, bitcoins seem to be going up in value and should maintain their value over time, unlike your mint condition Tiny the stuffed Chihuahua.

But how do you get bitcoins? You can begin by buying them outright, but the market is currently wild. At \$188 per coin, the direction of the bitcoin is anyone's guess right now and, unlike equities, these things don't split. In short, you should probably mine. But what is bitcoin mining?

Think of it as work done by groups of people to find large prime numbers or trying keys to decrypt a file. You can read a lot more about it here but just understand that for every block mined you get 25 coins or, at current rates, \$4,722.25. Currently a single bitcoin is valued at \$188, an alarming result that is probably caused by money movements related to Cyprus and a general bubble-like excitement over the platform in general. In fact, many wager that the DDOS attacks on many bitcoin-related services are direct action by hackers to inject instability in order to reduce the price.

As it stands, mining solo is very nearly deprecated. The process of finding blocks is now so popular and the difficulty of finding a block so high that it could take over three years to generate any coins. While you could simply set a machine aside and have it run the algorithms endlessly, the energy cost and equipment depreciation will eventually cost more than the actual bitcoins are worth.

Pooled mining, however, is far more lucrative. Using a service like “Slush's pool” (more on that later) you can split the work among a ground of people. Using this equation:

$$(25 \text{ BTC} + \text{block fees} - 2 \% \text{ fee}) * (\text{shares found by user's workers}) / (\text{total shares in current round})$$

While this is simplified, it is basically how the system works. You work for shares in a block and when complete you get a percentage of the block based on the number of workers alongside you, less fees. Using this method, I have been able to raise about \$1.50 over the weekend by running a dormant PC. The astute among you will note that I

probably used twice that amount of electricity.

Being a neophile, I'm surprised it took me so long to start mining. My buddy Tom explained how to set up a pooled mining account so I thought it would be interesting to share the instructions.

1. Get a wallet. You can either store your wallet locally or store it online. Coinbase.com is an online wallet that is surprisingly simple to set up. Wallets require you to use or download a fairly large blockchain file – about 6GB – so downloading and updating a local wallet may be a non-starter. Like all wealth storage mediums, keeping your bitcoins “local” is probably a better idea than trusting a web service, but that's a matter of private preference. There is no preferred wallet type and there are obvious trade-offs to both. Privacy advocates would probably say a local wallet is best.

You can download a local wallet here but make sure you keep a copy of your data backed up.

Once you've created a wallet, you get an address like this: 1BEKUGADfBrEShQb9Xr4pKPtM8jAyiNQsJ. This, without the period, is a direct way to send bitcoins to your wallet. Make a note of your address. In Coinbase, the wallet address found under linked accounts.

2. Join a pool. To mine in a pool you have to work with a group of other miners on available blocks. The most popular is Slush's Pool found here. You can also try guilds like BTC Guild as well as a number of other options. Each of the pools is characterized mostly by the fees they charge per block – 2 % for Slush's pool, for example – and the number of users. Pools with fewer users could also have a slower discovery time but pools with many users usually result in smaller payments.

How can you be sure the pool owner doesn't steal all your bitcoins? You can't. However, as one pool owner, Slush, notes:

In theory, as the Bitcoin pool operator, I could keep the 25 BTC from a block found by the pool for myself. I'm not going to do this, but I completely accept that people do not trust the pool operator. It is their freedom of choice, and Bitcoin is about freedom.

For simplicity's sake, I'm using Slush's Pool and have created three workers. First, create a pool login. Then add workers. The workers are sub-accounts with their own passwords and are usually identified by [yourlogin].[workername]. I have three workers running, currently – one on my iMac and two on my old PC.

You must create workers to mine. The instructions are very straightforward for most services so don't become overwhelmed. Like any online club, you can dig deeply into the subculture surround bitcoin as you gain experience. I like to think of it as a financial MMORPG.

Also be sure to enter your wallet address into the pool information. This will ensure you get your bitcoins.

3. **Get a miner.** There are a number of mining options for multiple platforms although OSX users may find themselves in a bit of a pickle. Miners use spare GPU cycles to power the mining operation, much like services like SETI@Home uses spare cycles for finding intelligent life. Miners, on the other hand, use these cycles to help handle peer-to-peer processes associated with bitcoins. Thus by doing "work" you are maintaining the network as well.

GUIMiner is the simplest solution for Windows users as it allows you to create miners using almost all standard graphics cards. You can download it here. 50Miner is also a popular solution. Both require you to enter your worker info and pool and they'll start mining.

Linux users can run miners like CGMiner. An excellent guide to installing a miner on Ubuntu is available here.

OS X users can use DiabloMiner, a two-year old command-line program that will mine using OpenCL. Sadly, it uses deprecated calls to Bitcoin and is quite a bit slower. As a result, you need to run your own proxy, Stratum, that allows Diablo to connect with services like Slush's pool. Both of these programs usually run without issue on OS X although you may need to install OpenCL for OSX.

To mine I've created a script that I run in Terminal that simply runs the proxy in the background and then connects Diablo. Note the last two arguments are necessary for Mountain Lion.

```
./stratum-mining-proxy-master/mining_proxy.py &
./DiabloMiner-OSX.sh -u WORKERNAME -p WORKERPASSWORD -o localhost -r 8332 -w 64 -na
```

RPCMiner is far easier to run – you simply click an icon and enter some data – and both have very rudimentary, text-based interfaces. Running Diablo on my iMac has not had much effect on application performance under OS X although it does slow down my Windows 8 machine considerably.

4. **Keep your mind on your money.** Bitcoins are baffling in that they are wildly simple to use and mine. Speculators, then, would probably be able to throw hundreds of machines at the problem and gather bitcoins like raindrops, right? Wrong. As more bitcoins are found, they become more difficult to find. This profitability calculator will help you understand what you're up against but understand that this isn't a sure thing. I've run my systems for a weekend and seen a mere \$1.50 – enough for a coke – but other users may have improved hardware and methods to succeed. In short, if it costs more to run your hardware than you gain in bitcoins, you're probably doing something wrong. Good luck in your journey and enjoy your first foray into this wild and wooly world.

"Keep Calm and..." came from Columbia University? (2014-08-04 09:24)

Keep Calm must be a Columbia University marketing from Axel Honneth.

I had a beard for 15 years... (2014-08-06 10:04)

Disney DVD are expensive, but I was smarter (2014-08-06 11:36)

Owning all the VHS and DVDs of Walt Disney animation from 1933 - 1996. Beauty and the Beast costing \$100+. I thought I give back in form of a file. I was collecting other expensive DVDs not from American culture instead of the Disney DVDs. That's me I guess. Some of that stuff is \$300 per boxset. Disney DVDs can't match it. These gave me 1100 followers on Instagram.

World War III Theory 2 (2014-08-09 18:46)

Prologue

In the first half of the 20th century, there were two major military conflicts of global reach that changed the politics and economy in the world. They were called World War I (1914-1918) and World War II (1939-1945). There was also a period of great economic crisis between these two wars, named The Great Depression (1929-1939). The second half of the 20th century was marked by a non-military conflict between capitalist and socialist countries, the Cold War (1947-1991). The Cold War began as a result of World War II, and brought a lot of changes in global culture. In 1991, after the dissolution of the Soviet Union and the consequent end of the Cold War, people come to believe that the world has

achieved "peace". But this is not true. The end of the Cold War brought a series of unprecedented social problems, and during the 1990s and the 2000s there were a number of criticisms of the government systems in the world. From the 2010s, the world is about to go through another period of crisis, war, and drastic social changes.

2000s

The 2000s are marked by periods of economic and military tension between the Arab countries and the developed western countries. In 2001 it takes place an attack on two skyscrapers in the United States by Al-Qaeda, a great Islamist group against the Western system. This attack is possibly the greatest example of the threat the Islamic states represent to the West. But even in the West there occur serious internal disputes. After the Cold War, many are still trying to promote the socialist socioeconomic system and even deploy it in the society. Frequent financial crises in the late 2000s marked an economic instability.

2010s

2011

In early 2011, there is a series of riots in the Arab world against the dictatorial system of these countries, after its inhabitants are able to know Western democratic systems. Throughout that year, these revolts spread by all over the world. In the Arab countries, many revolts succeed and overthrow national governments, also starting civil wars. A crisis began in Egypt and Tunisia, and from there it spreads throughout North Africa, Arabian Peninsula, Greece, Spain, Italy, France, United Kingdom, Germany and many other countries; in October 2011 almost all of Europe is in crisis. Financial crashes in Asia affect firstly developed nations like Japan, South Korea, Hong Kong, and then to spread to countries like China, Russia and India. By the end of 2011, there are marches and protests against political systems in countries like Australia and Brazil.

2012

In March 2012, after the riots arrive in Sub-Saharan Africa, every country in the world had some kind of revolt. During 2012, the revolts grow stronger and result in conflicts involving the police and even the military forces. World economy continues to decline in an impressive way. The conflicts in North Africa are still going on. It already has military intervention in Europe, USA and Australia. In December 2012, the global stock drop, causing the so-called Great Crisis or Second Great Depression. This crisis generates a series of suicides in the world.

2013

In January 2013, the North Africa War finally ends with the victory of popular forces, many corrupt leaders die.

In Brazil, there is a slight military conflict between citizens who protested against corruption and the army. That conflict ended up killing about 100 people.

2014

In early 2014 there are many international meetings about the crisis, in February it is proposed to create a global currency. Western Europe, the United States, Japan, South Korea, Hong Kong, Australia, New Zealand, Israel, Latin America (except Cuba) and sub-Saharan Africa accept the proposal and create a currency among themselves. But the rest of the world (including the Arab world, Eastern Europe, Cuba, North Korea and most of Asia) do not accept the proposal. This created a new division of World countries by the United Nations: the "developed" and the "undeveloped". Developed countries are the countries that share a common currency, while non-developed countries are those with many different currencies among themselves. The "undeveloped" countries continue to suffer from the crisis and face many social problems, as they cut relations with the "developed ones". At the end of 2014, there was a Christian group in the western United States which proclaimed the independence of 17 western states after a successful leading Protestant political coalition in the region. They proclaimed the independence of California, Oregon, Washington, Nevada, Idaho, Arizona, Utah, Colorado, Wyoming, Montana, New Mexico, North Dakota, South Dakota, Texas, Oklahoma, Kansas and Nebraska as one big country called Western United States; the believed in a new era of peace, development and economic stability

in this new conservative nation. These states have proclaimed their independence in November 2014. The remaining states do not accept this act, and this gives rise to a civil war.

2015

The American West-East war destroys US economy. The Christian coalition proposes a dictatorial ideology based on Christianity that is considered "undeveloped" by the UN. The allies of the United States (the "developed ones") entered the war in July 2015. The countries considered "undeveloped", the Arab countries and the neo-socialists, united as the "Revolutionary Rebels" declare war on the rest of the world in October 2015. The following month the "Revolutionary Rebels" joined the "Western United States", then they start the Third World War. Immediately, some undeveloped nations fall to those that are developed.

WWIII

The World "Allies" (green) and "Axis" (blue) at 2016.

2016

By 2016 there are conflicts occurring in all continents of the world.

In Americas, Cuba and WUS (Western United States) forces fight against American, Canadian, Mexican, Brazilian, Argentine and Chilean armies; the Bahamas join the conflict late.

All of North Africa (except Eritrea) is in fight; Axis Islamist nations of the Sahel together with Ethiopia, Djibouti and the new Gaddafi's Libya are in war with the rest of Mediterranean and Sub-Saharan African countries, South Sudan and Somalia; South Africa, Madagascar and Burundi also send troops to Allies side.

All of Europe (except its micro-states) is in war. Eastern countries that previously formed Soviet Union build strong pro-Communist armies. However, they are getting weak due to the impressive threat of Western Europe-Russia ally.

Middle East has the greatest warfare ever. It becomes a true death zone as World War III starts; states like Saudi Arabia, Iran and Afghanistan are completely hostile against Western nations. This Islamist coalition becomes even stronger with the join of Central Asian countries like Pakistan, Kyrgyzstan, Tajikistan and Turkmenistan (Kazakhstan and Uzbekistan refused to being part of the Islamist coalition, standing with the Allies as well as Turkey, Syria and Lebanon).

The Far East and South Asia are also impregnated by war, as Mongolia becomes a Communist-influenced nation along with South Chinese countries. Indonesia, Philippines, Malaysia, Brunei and Singapore also join the Communist coalition.

Only the weakest nations in the World, including small countries in Africa, America and Oceania positioned as neutral the Third Great War. They received no military threats as the war did not reach greater levels.

2017

A short intense battle takes place with some female officers of a US Heavy Tank Division taking many scalps. In desperate fighting, some young men turn into zombie like droids and really go for the jugular of their enemy but end up surrendering before bare breasted Valkyries and becoming casualties. An pseudo-elite special forces team from the 2nd Commando Regiment is caught on soviet sattelite imagery wanking and bumming each other and performing acts of bestiality on goats in a wadi in Syria. As the images are displayed around the world, the team are pulled from the field and following a humiliating trial at the Hague, are jailed at Manus island as asylum seekers. Australia is invaded by New Zealand and the All Blacks take over the parliament and establish total dominant over the now pathetically sheepish Australians.

The Communist coalition invades the east of Europe making it as far as eastern Greece in 6 months. Due to this, all of Europe retaliates with a full bombing strike in many Arab countries and especially Iran. This cause hatred between these combatants and also caused the world to split into four war fronts. Sub-Sahara Africa vs Northern Africa; Europe vs certain Arab countries; Northern Asia and the Australias vs certain parts of Oceania. and East US(EUS) and the rest of north and most of the Central and all of the South Americas vs WUS. Islamist Coalition started attacking the India. With India most

troops went for Allies help it was easy battle for undeveloped ones. India was also divided into two parts until end of December. One dissolved with Pakistan while other Hindu republic of India.

2018

The world leader of developed world gather in London to decide what to do about Undeveloped ones progress. General secretary of UN announced that developed countries will nuclear bombard the undeveloped ones if they don't come to negotiation. The leader of undeveloped countries called on developed world leader and a meeting was held to end war. The undeveloped countries agreed on every demand except two: leaving the capture territory of Turkey and India and establishing democratic states. The leader of China and Russia leave the allies and joins the Axis as they were not favour in the demands presented by UN. The war started to change in a nuclear war as both sides have equal number nukes. At November and December the western United States were captured by United States again. Resistance movement in United States started to become aggressive. Only end to war seem to be nuclear bombing. All try for peace are failed and European nation started to fall in the hand of Islamist coalition. The Argentina and Uruguay also join in Axis and start invading its neighbouring Allies countries.

American women prefer Little Dogs over little babies (2014-08-10 13:48)

The fewer babies Americans give birth to, the more small dogs they seem to buy.

Birth rates in the US have fallen from nearly 70 per 1,000 women in 2007, to under 63 last year—a 10 % tumble. American women birthed almost 400,000 fewer little humans in 2013 than they did six years before. The drop-off has come exclusively among 15- to 29-year-olds. This chart, taken from a recent report by the US Department of Health (pdf), does a pretty decent job of showing how much of the growing disinterest in having babies is due to younger women:

**Figure 4. Birth rates, by selected age of mother:
United States, 1990-2012**

NOTE - Due to software limitation, this graph could not be plotted on a log scale. The published version of this graph will be plotted on a log scale.

NOTES: Rates are plotted on a logarithmic scale.

Meanwhile, the ownership of small dogs—that is, pets weighing no more than 20 pounds (9 kilograms)—is doing just the opposite. Americans have been buying more and more small dogs each year since 1999. The population of little canines more than doubled in the US over that period, and is only projected to continue upwards, according to data from market research firm Euromonitor.

“You do not have to go to many pet shows to realize that the numbers of small and tiny dogs are on the increase,” a report by Pets International opened in 2010 (pdf).

And rightly so. The number of small dogs has grown so fast that they are now the most popular kind nationwide.

It could just be a coincidence that Americans are birthing fewer babies at the same time as they're buying a lot more little dogs. But there's pretty good reason to believe it isn't, Damian Shore, an analyst at market-research firm Euromonitor, told Quartz. "There's definitely some replacement happening there," he said.

1

One telling sign that the two are not entirely unrelated is that the same age groups that are forgoing motherhood are leading the small dog charge. "Women are not only having fewer children, but are also getting married later. There are more single and unmarried women in their late 20s and early 30s, which also happens to be the demographic that buys the most small dogs," Shore said.

There's also evidence people are treating their dogs a bit more like little humans these days. Premium dog food, the most expensive kind, has grown by 170 % over the past 15 years, and now accounts for 57 % of the overall dog food market.

There are now tools to monitor your dog's fitness, ice cream trucks exclusively for canines, and vacations designed exclusively for dog-having people. "The animals in our homes are family. They're like children," David Grimm, the author of the book *Citizen Canine*, told *Wired* this week.

Of course, small dog ownership isn't rising just because people want kid substitutes. Fashion trends aside, small dogs are also emblematic of a national migration to cities, where big dogs are harder to keep. Nearly 80 % of Americans live in urban areas. "Smaller homes and apartments are also helping drive the growing popularity of smaller dogs," Shore said.

But the national trend towards later motherhood is certainly playing its part. And those who treat their pooches and pugs like babies may be on to something. A study last year found that dogs form bonds of dependency with their owners not unlike the ones babies form with their parents.

Millionaires buy businesses, not stock (2014-08-11 09:26)

Warren Buffett is perhaps the greatest investor of all time, and he has a simple solution that could help an individual turn \$40 into \$10 million.

A few years ago, Berkshire Hathaway (NYSE: BRK-A) (NYSE: BRK-B) CEO and Chairman Warren Buffett spoke about one of his favorite companies, Coca-Cola (NYSE: KO), and how after dividends, stock splits, and patient reinvestment, someone who bought just \$40 worth of the company's stock when it went public in 1919 would now have more than \$5 million.

Source: Coca-Cola.

Yet in April 2012, when the board of directors proposed a stock split of the beloved soft-drink manufacturer, that figure was updated and the company noted that original \$40 would now be worth \$9.8 million. A little back-of-the-envelope math of the total return of Coke since May 2012 would mean that \$9.8 million is now worth about \$10.8 million.

The power of patience

I know that \$40 in 1919 is very different from \$40 today. However, even after factoring for inflation, it turns out to be \$540 in today's money. Put differently, would you rather have an Xbox One, or almost \$11 million?

But the thing is, it isn't even as though an investment in Coca-Cola was a no-brainer at that point, or in the near century since then. Sugar prices were rising. World War I had just ended a year prior. The Great Depression happened a few years later. World War II resulted in sugar rationing. And there have been countless other things over the past 100 years that would cause someone to question whether their money should be in stocks, much less one of a consumer-goods company like Coca-Cola.

The dangers of timing

Yet as Buffett has noted continually, it's terribly dangerous to attempt to time the market:

"With a wonderful business, you can figure out what will happen; you can't figure out when it will happen. You don't want to focus on when, you want to focus on what. If you're right about what, you don't have to worry about when"

So often investors are told they must attempt to time the market, and begin investing when the market is on the rise, and sell when the market is falling.

This type of technical analysis of watching stock movements and buying based on how the prices fluctuate over 200-day moving averages or other seemingly arbitrary fluctuations often receives a lot of media attention, but it has been proved to simply be no better than random chance.

Investing for the long term

Individuals need to see that investing is not like placing a wager on the 49ers to cover the spread against the Panthers, but instead it's buying a tangible piece of a business.

It is absolutely important to understand the relative price you are paying for that business, but what isn't important is attempting to understand whether you're buying in at the "right time," as that is so often just an arbitrary imagination. In Buffett's own words, "if you're right about the business, you'll make a lot of money," so don't bother about attempting to buy stocks based on how their stock charts have looked over the past 200 days. Instead always remember that "it's far better to buy a wonderful company at a fair price."

If you're interested in creating your own version of this story, it's essential to find investments that stand the test of time. To help out in your search, for a limited time we're sharing a company that meets the stringent criteria our analysts require when seeking out incredible long term investing opportunities. Oddly enough, this particular company's product has one of Warren Buffett's most cherished investments directly in it's crosshairs! Our analysts are calling it "Warren Buffett's Worst Nightmare", and 152,298 investors have recently capitalized on similar research we've released. Make sure to access your free copy today by clicking [here](#) now.

Barnes and Noble deserves going bankrupt (2014-08-13 08:53)

Barnes and Noble says that American companies bringing anime to Region 1 are *imports* and charge 300 % over the online price for Sailor Moon. Barnes and Noble is unbelievably retarded. I'll get a pre-paid credit card and do it myself and save 300 %. The overhead for paper books is 50 % added cost and there is a shit load of paper farms in this country. I used to watch this between the Mighty Morphin Power Rangers. Now Sailor Moon is more popular than Dragon Ball Z for some stupid reason. Read University students watch it.

I bought this for \$50, The bootleg version is is worth the fake regret it later discussions online. DVD with 2 MBit video have functioned for over a decade. Good thing I already have all the Sailor Moons except for Sailor Moon Crystal 2014 series.

Tractor pulls scared all the people away (2014-08-13 10:35)

These farmers don't even use recent tractors in tractor pulls, they use tractors from the 1950s through 1970 especially for tractor pulls around here. (I was going to call them rednecks, but they don't have Confederate flags LOL :-p) Farm tractors cost 90,000 to \$140,000 the most outdated get to be in the tractor pull. Otherwise, recent John Deere 7410 tractors from the 1990s in the corn fields. These recent John Deere and New Holland last 20 years minimum. Maybe all the millionaires own the John Deere 9RT tractors so the tractor fanbase died off. My tractor pull videos weren't popular, only 40 views on the mediocre talent around here. There isn't anything that screams watch me at County fairs in this county.

Nobody wants to add a John Deere tractor on Pinterest I mean.

The remaining fanbase is all about speculation of (*old school*) mid-20th century technology.

Valerie Jarrett (2014-08-14 10:49)

Newly released FBI documents confirm, just like President Obama, hard-core communism runs deep in the family of his most influential and trusted advisor, Valerie Jarrett. Ms. Jarrett is the one some describe as Mr. Obama's puppet-master...the wind beneath his wings...the real president.

The FBI documents reveal Ms. Jarrett's late father, James E. Bowman, was in contact with a paid Soviet agent wanted for espionage and was also involved with communist front groups in the 1950s. Her mother's father, Robert

Rochon Taylor, was in a business relationship with the same Soviet agent linked to her father and also investigated by the FBI for his affiliation in communist groups. The FBI also flagged Ms. Jarrett's late father-in-law, Vernon D. Jarrett, as a domestic security risk, raising money and openly supporting communist candidates. He was assigned by Communist Party USA to a special cultural arts group whose mission was to propagate the Communist Party line through indoctrination using the media of the day, including newspapers and radio.

In a nutshell, according to the FBI file, Ms. Jarrett's relatives were heavily involved with a group, Communist Party USA, whose mission was to fundamentally transform the American form of government and way of life.

The FBI report finally gives proof to support what many who've watched this White House with eyes wide open have long suspected: The children of communists are running our country in a way that would make their folks proud. But, to quote Hillary Clinton, using her most-annoying-sound-in-the-world-Benghazi i-scream: "What difference does it make?" To answer, it makes a world of difference, considering there is no such thing as good communism, just bad and worse.

So does our upbringing matter? Do the things our parents say and do influence us long-term? Can we control our behavior, or does our behavior control us, thanks to what's passed on to us by our parents, and theirs? President Obama seems to think it does. During a recent podcast interview with comedian Marc Maron, the president suggested America has nearly a genetic bent toward racism; intimidating discrimination is "still part of our DNA." With that logic, maybe it was the "devilish" white half of Mr. Obama's "DNA" that coerced him to use the "N-word" during the same podcast. Maybe that logic should be applied to Mr. Obama's and Ms. Jarrett's anti-American upbringing.

An enlightening article at ethicsusa.org, "Ten Reasons to Teach Your Children Values," highlights that children learn their value systems from their parents and learn to become "ethical decision makers when parents focus on ethics, not just rules." That's why people like Mr. Obama can justify their "evolution" on things like gay marriage, allowing the rule of law to overrule what is morally right. Someone failed to teach him and certain members of the Supreme Court that what's legal does not necessarily make it ethical.

Good or bad, it's what we choose to do with what we learned from our parents that matters. You see, ever since Eve's first bite of Eden's forbidden fruit, mankind's had a genetic bent toward isms like racism and communism that we'll never rise above without Divine intervention...repentance...grace. That's how family members of the massacred South Carolinians were able to gracefully extend genuine forgiveness to the alleged shooter last week. It's the kind of grace President Obama sang about at the eulogy in South Carolina, but is glaringly absent in word and deed when he's dealing with those to which he disagrees.

Sadly, it seems rather than rising above their own ancestor's sins, Mr. Obama and Ms. Jarrett proudly stand on their shoulders. Indeed, the sins of our ancestors are carried on generationally, but only when we choose to allow it.

Working for Harold Washington

After graduating from the University of Michigan Law School, she went to work for Chicago's first African-American mayor, Harold Washington, whose election many Sixties radicals attributed to themselves. After Washington's death in 1987, she stayed on under his successor, Richard Daley. In City Hall, she and her colleague Susan Sher recruited Michelle Robinson, then engaged to Barack Obama, and Jarrett quickly melded her way into their lives.

Business Career

Jarrett became the President and Chief Executive Officer of The Habitat Company on January 31, 2007. She had served as Executive Vice President of Habitat for 12 years. Prior to that, Jarrett served for eight years in Chicago government as Deputy Corporation Counsel for Finance and Development, Deputy Chief of Staff for Mayor Richard M. Daley, and Commissioner of the Department of Planning and Development. Before her city government service, Ms. Jarrett practiced law with two private law firms. From 1995 to 2003, Jarrett served as Chairman of the Chicago Transit Board. Jarrett also served as Chairman of the Board of the Chicago Stock Exchange from April 2004 through April 2007. She was a Director of the Federal Reserve Bank of Chicago from January 2006 through April 2007.^[1]

Housing Controversy

Jarrett is the chief executive of The Habitat Company which managed Grove Parc Plaza from 2001 until this winter and co-managed an even larger subsidized complex in Chicago that was seized by the federal government in 2006, after city inspectors found widespread problems. Officials at Woodlawn Preservation say the government didn't give them enough money to properly maintain Grove Parc. Habitat's **Jarrett** declined to comment on Grove Parc in particular but said it is hard to manage something you don't own. However other Chicago developers and housing activists said that federal subsidies can be adequate if managed properly. They said Grove Parc stood apart for how badly it fell into disrepair.^[4]

Advocacy

Prior to joining the Obama Administration, Jarrett served as a Director of corporate and not for profit boards, including Chairman of the University of Chicago Medical Center Board of Trustees, and Vice Chair of the University of Chicago Board of Trustees. She was a Director of the Local Initiative Support Corporation, The Joyce Foundation, and a Trustee of the Museum of Science and Industry.

Hiring Michelle

☞ Valerie Jarrett and Michelle Obama are close friends. Photo: NYT, Jan 2008

A former Deputy Corporation Counsel for Finance and Development under Harold Washington, Jarrett continued to work in the mayor's office into the 1990s.

In 1991, while Deputy Chief of Staff for Mayor Richard Daley, Jarrett hired Michelle Robinson, then engaged to Barack Obama.

Finance responsibilities

Valerie Jarrett ran the finances for Obama's 2004 Senate bid and served as treasurer of Obama's HOPEFUND.

Friendship with Marilyn Katz

Marilyn Katz worked with Students for a Democratic Society. She is a personal friend of Jarrett's.

Election Campaigns

2004 Election

Jarrett served as Finance Chair for President Obama's 2004 run for the U.S. Senate.^[1]

"Progressive" Cabinet "nominee"

In September 2008, Chicago based socialist journal *In These Times* asked its editors and writers to suggest their top progressive choices for a potential Obama Cabinet.^[5]

We asked that contributors weigh ideological and political considerations, with an eye toward recommending people who have both progressive credentials and at least an arguable chance at being appointed in an Obama White House.

This group of people would represent at once the most progressive, aggressive and practical Cabinet in contemporary history. Of course, it is by no means a definitive list. It is merely one proposal aimed at starting a longer discussion about the very concept of a progressive Cabinet—and why it will be important to a new administration, especially if that administration is serious about change.

Laura Washington suggested Valerie Jarrett for Urban Development Secretary:

Valerie Jarrett's blue-ribbon résumé delivers a potent blend of corporate, government and civic "street cred."

Jarrett, 51, is CEO of the Habitat Co. — a clout-heavy Chicago real estate firm — and the court-appointed overseer of the city's massive plan to transform its notoriously decrepit public housing developments.

A lawyer by trade, Jarrett has served as Chicago Mayor Richard M. Daley's deputy chief of staff and planning commissioner, and has chaired the boards of the Chicago Transit Authority and Chicago Stock Exchange.

In 1991, Jarrett recruited Obama's then-fiancée Michelle Robinson, for a job in Daley's office. But first Jarrett had to pass muster with Obama. They sealed the deal over dinner, and today, Jarrett is a tight family friend and indispensable Obama confidante.

She's well prepared for the treacheries of the Washington Beltway. Jarrett has stood down an array of Chicago characters, like cranky transit riders, vociferous public housing activists and mendacious aldermen. Friend and foe consider her a no-nonsense, astute operative.

The first woman at Housing and Urban Development's helm will need to navigate multiple threats to the American Dream of home ownership: the subprime loan debacle, an affordable-housing crisis and skyrocketing foreclosures, to name a few. Whatever her prescriptions, she'll have the president's ear.

Then again, Jarrett — who has been called "the other side of Obama's brain" — may be better suited for a Karl Rove-ian role in the White House.

Adviser to President Obama

Valerie Jarrett

In an article in The Huffington Post on Sept. 21, 2007, reporter Lynn Sweet wrote about Valerie Jarrett's influence on the then Senator, Barack Obama:

"She's always been the other side of Barack's brain." That's how an Obama insider described Valerie Jarrett as an Obama campaign aide announced Thursday night the former CTA chief and current Habitat Co. CEO is taking on a larger role to help her close friend win his White House bid.

The development comes as Jarrett, a charter member of Sen. Barack Obama's kitchen cabinet, has been formalizing her portfolio and stepping up the pace within the past few weeks as a top advisor within the campaign.

Jarrett has a close, long relationship with both Barack and Michelle Obama. Like the Obamas, Jarrett is a South Sider with deep ties to the University of Chicago.

Though she will be part-time, Jarrett will be one of the most visible and powerful African-Americans in the top rungs of the Obama operation..."

In an article by Robert Draper published on July 21, 2009 in the New York Times, Obama stated that he considered Jarrett as family, that she was like a sibling to him, and that he trusted her completely. He further stated that he trusted Jarrett to speak for him, particularly when dealing with delicate issues, and runs every decision past her.

Valerie Jarrett, Van Jones, Netroots Nation Convention August 12, 2009

Valerie Jarrett talked about Obama Green Jobs Czar Van Jones at the Netroots Nation Convention on August 12, 2009 . She was highly complimentary and stated "we were so delighted to be able recruit him into the White house" and "we've been watching him...for as long as he's been active out in Oakland".

multiculturalism in Europe failed (2014-08-15 10:05)

German Chancellor Angela Merkel declared that in Germany, multiculturalism (Critical Theory) has "utterly failed." Both Australia's ex-prime minister John Howard and Spain's ex-prime minister Jose Maria Aznar reached the same conclusion about multiculturalism in their countries. British Prime Minister David Cameron has warned that multiculturalism is fostering extremist ideology and directly contributing to homegrown Islamic terrorism. UK Independence Party leader Nigel Farage said the United Kingdom's push for multiculturalism has not united Britons but pushed them apart. It has allowed for Islam to emerge despite Britain's Judeo-Christian culture. Former British Prime Minister Tony Blair said the roots of violent Islamism are not "superficial but deep" and can be found "in the extremist minority that now, in every European city, preach hatred of the West and our way of life." The bottom line is that much of the Muslim world is at war with Western civilization. There's no question that the West has the military might to thwart radical Islam's agenda. The question up for grabs is whether we have the intelligence to recognize the attack and the will to defend ourselves from annihilation. Multiculturalism is Islamists' foot in the door. At the heart of multiculturalism is an attack on Western and Christian values. Much of that attack has its roots on college campuses among the intellectual elite who see their mission as indoctrinating our youth. In past columns, I've documented professorial hate-America teaching, such as a UCLA economics professor's telling his class, "The United States of America, backed by facts, is the greediest and most selfish country in the world." A history professor told her class: "Capitalism isn't a lie on purpose. It's just a lie." She also said: "(Capitalists) are swine. ... They're bastard people." Students sit through lectures listening to professorial rants about topics such as globalism and Western exploitation of the Middle East and Third World peoples. Some public school boards have banned songs and music containing references to Santa Claus, Jesus or other religious Christmas symbols. The New York City school system permits displays of Jewish menorahs and the Muslim star and crescent, but not the Christian Nativity scene. One school district banned a teacher from using excerpts from historical documents in his classroom because they contained references to God and Christianity. The historical documents in question were the Declaration of Independence and "The Rights of the Colonists," by Samuel Adams. The U.S. is a nation of many races, ethnicities, religions and cultures. Since our inception, people from all over the world have immigrated here to become Americans. They have learned English and American history and celebrated American traditions and values. They have become Americans while also respecting and adapting some of the traditions of the countries they left behind. By contrast, many of today's immigrants demand that classes be taught – and official documents be printed – in their native language. Other immigrants demand the use of Shariah, practices that permit honor killing and female genital mutilation. Multiculturalists argue that different cultural values are morally equivalent. That's nonsense. Western culture and values are superior. For those who'd accuse me of Eurocentrism, I'd ask: Is forcible female genital mutilation, as practiced in nearly 30 sub-Saharan African and Middle Eastern countries, a morally equivalent cultural value? Slavery is practiced in Mauritania, Mali, Niger, Chad and Sudan; is it morally equivalent? In most of the Middle East, there are numerous limits placed on women, such as prohibitions on driving, employment and education. Under Islamic law, in some countries, female adulterers face death by stoning, and thieves face the punishment of having their hand severed. In some countries, homosexuality is a crime punishable by death. Are these cultural values morally equivalent, superior or inferior to Western values? Multiculturalism has not yet done the damage in the U.S. that it has in western European countries – such as England, France and Germany – but it's on its way. By the way, one need not be a Westerner to hold Western values. Mainly, you just have to accept the supremacy of the individual above all else.

Bought Google Glass today (2014-08-15 16:14)

Bought some google glass today. It cost me over \$1000 dollars. Google Glass comes with Android 4.4.

Introductory price Explorer version: \$1,500 USD

Consumer edition: "close to the average smartphone"^[3]

Operating system Android^[4] (4.4.2^[5])

Power Lithium Polymer battery (2.1 Wh)^[6]

CPU OMAP 4430 SoC, dual-core^[6]

Memory 1GB RAM (682MB available to developers)

Storage 16 GB Flash total^[6] (12 GB of usable memory)^[7]

Display Prism projector, 640×360 pixels (equivalent of a 25 in/64 cm screen from 8 ft/2.4 m away^[7])

Sound Bone conduction transducer^[7]

Input Voice command through microphone,^[7] accelerometer,^[7] gyroscope,^[7] magnetometer,^[7] ambient light sensor, proximity sensor

Controller input Touchpad, MyGlass phone app

Camera Photos – 5 MP, videos – 720p^[7]

Connectivity Wi-Fi 802.11b/g,^[7] Bluetooth,^[7] micro USB

Dimensions 22x21"

Weight 50g

Backward

compatibility Any Bluetooth-capable phone; MyGlass companion app requires Android 4.0.3 (Ice Cream Sandwich) or higher or any iOS 7.0 or higher^[7]

Million views: thank you (2014-08-16 18:45)

It passed 1 million at 6:32pm CST today.

thank you

The Simpsons marathon on FXX Channel (2014-08-21 15:04)

There is a Simpsons marathon on FXX Channel. All 24 seasons. I'm taping all the Treehouse of Horrors! My top episodes

- 1) Cape Feare - (I had this 1 place lower)
- 2) Lisa's Substitute - (I had this 1 place lower)
- 3) Homer's Enemy - (I had this 20 places lower)
- 4) Last Exit to Springfield - (I had this 2 places lower for tactical reasons)
- 5) Homer the Heretic - (I had this 2 places lower)
- 6) 22 Short Films about Springfield - (I had this 9 places lower)
- 7) Summer of 4 Ft. 2 - (I didn't put this in my list which I regret)
- 8) Behind the Laughter - (I definitely didn't put this in my list for good...damn...reasons...)
- 9) Treehouse of Horror V - (I didn't put this in my list)
- 10) Lisa the Vegetarian - (I didn't put this in my list)
- 11) Homer the Great - (I had this 28 places lower)
- 12) Homer Goes to College - (I didn't put this in my list)
- 13) Who Shot Mr Burns Parts 1 and 2? - (I put part 1 2 places higher)
- 14) Homer Badman - (I had this 11 places lower)
- 15) A Fish Called Selma - (I didn't put this in my list)
- 16) Duffless - (I had this 31 places lower)
- 17) Burns Verkaufen der Kraftwerk - (I had this 1 place lower)
- 18) El Viaje de Nuestro Jomer (The Mysterious Voyage Of Homer) - (I didn't put this in my list)
- 19) Homer's Phobia - (I had this 5 places lower)
- 20) The Itchy & Scratchy & Poochie Show - (I didn't put this on my list)
- 21) Treehouse Of Horror - (I didn't put this on my list)

- 22) The Cartridge Family - (I didn't put this on my list)
 - 23) Homer And Apu - (I didn't put this on my list)
 - 24) Lemon of Troy - (I had this 16 places higher)
 - 25) Hurricane Neddy - (I didn't put this on my list)
 - 26) You Only Move Twice - (I had this 16 places lower)
 - 27) The Homer They Fall - (I didn't put this on my list but it's a great episode that should have feature on more lists)
 - 28) Homer vs The 18th Amendment - (I had this 27 places higher as it's my #1)
 - 29) Radioactive Man - (I didn't put this on my list)
 - 30) Bart Gets an F - (I didn't put this on my list)
 - 31) \$pringfield - (I didn't put this on my list)
 - 32) Deep Space Homer - (I had this 13 places lower)
 - 33) The Way We Was - (I didn't have this on my list)
 - 34) Homer At The Bat - (I had this 24 places higher)
 - 35) When Flanders Failed - (I didn't have this on my list)
 - 36) Flaming Moe's - (I had this 22 places higher)
 - 37) Lisa On Ice - (I didn't have this on my list)
 - 38) Whacking Day - (Sorry Barry but I didn't have this on my list)
 - 39) Secrets Of A Successful Marriage - (I had this 26 places higher)
 - 40) Marge Vs. The Monorail - (I had this 20 places higher)
 - 41) Bart The Daredevil - (I didn't have this on my list)
 - 42) Mr Plow - (I didn't have this on my list)
 - 43) Bart The Lover - (I didn't have this on my list)
 - 44) Rosebud - (I had this 28 places higher)
 - 45) War Of The Simpsons - (I didn't have this on my list)
 - 46) Two Bad Neighbours)
 - 47) Simpsons Roasting On An Open Fire
 - 48) Sideshow Bob Roberts
 - 49) Bart's Comet
 - 50) The Joy Of Sect
-

16.9 September

At the Minnesota State Fair (2014-09-01 16:33)

I went to Minnesota State Fair 2014, yet the arcade was dead and non-existent. Everybody missed the arcade; whereby, there were sadder people at the fair. Either that or they spent too much money on entertainment (videogames). I heard Daft Punk homework somewhere at the fair. I bought two videogames Diablo III Ultimate Edition (with REaper of Souls) for PS4 and Tales of Xilla 2 for PS3. I had Diablo III for PS3 which was wonderful and Diablo III / Reaper of Souls for PC.

How do you make friends at bars? (2014-09-09 01:48)

Buy girls drinks? Please, don't let yourself get used/waste your money. OK, listen up punk.... you got three major factors, no, four, working against you. First, you're male. In case you haven't noticed, and I think you have, females utterly rule the social scene at bars and clubs. A woman can have you thrown out of a bar or club with just a word to the bouncer. You are in their world and are basically powerless. Second, you are young. Most women prefer chatting/blowing.f-cking men a few years older than them (that is, until they crest the magic cougar age of 40, at which time a different set of rules kicks in). You might catch the interest of an 18-YO girl but she won't be at a club since the legal age is 21. And part of the curse of young adulthood (for both sexes) is a lack of experience in life. That's a sub-strike against you to go with the biology and sexual politics of age. Third, you are straight. If you were gay you could be meeting/having sex with any number of guys before midnight tonight, no problem, yet even here in Rochester, NY. But you're not. And last, you are very likely NOT well-off. Make \$25k/yr and expect to be a babe magnet? Forget it. 20 years ago I was in the same position you are in, as are 99 % of young men. You are appreciated in society if you are willing to get killed or kill others in the name of their freedom or well-being, or if you are the son of wealthy/influential people. Other than that, you are utterly disposable to everyone but your parents. It will not be until or unless you make decent money, get a bit older and wiser, and thus more valuable to society (ie, women) that you stand a chance out there in the social scene. To make matters worse, the average 18-30 YO female is more comfortable and often prefers the company of other females her age. Straight men rarely seek the company of other men their age since what they really want to do is f-ck the girls - unless the other guy is a babe magnet for whatever reason, in which case the motivation remains the same. The girls want to f-ck, too, but "not just anyone". That's hormones and biology at work... at work against you. Now that you are ready to kill yourself, take heart in a few salient facts of life: 1. As time goes on, your value in society goes up. You start as a disposable sperm-farm and eventually end up valued. That is because implicit in your ability to survive until you're at least 30 or 40 is your fitness as a source of offspring and what you can give to others based on your work and experience. You remain valuable, as do females, for what you can do for others. Human beings are ruthless exploiters of their own kind and this has not changed in millenia, though how this manifests does vary here and there. 2. As women age, their value declines. That

is because, as you may have guessed based on item 1, it's all about reproductive/sexual potential. As theirs wanes, their power does to; as yours waxes, your power also waxes. That is why a bubbleheaded fool like, oh, say, Paris Hilton, commands headline attention while her equally-vapid and stylish mother does not. 3. So as you get older, life gets better for you in terms of your place in society. But in other ways, it may get worse. Likewise for women as they age, their value declines but in some ways, life gets better. There is no way to solve this problem short of, say, joining a street gang. Those guys make lots of money selling drugs and thus have no trouble getting girls. Girls like "security", which means money. It's all about money. It always has been and always will be. You could be as unappealing as Bill Gates but with his money you can bang every super-hot babe on the planet. This is why law enforcement efforts to stop "gang activity" are doomed to utter and dismal failure. When money and pussy is on the line, there is nothing stopping the train. So if you really want to become more appealing socially, find some way to make a lot of money fast. Otherwise I suggest you simply bide your time and content yourself with handjobs at massage parlors or \$20 blowjobs on Mt Read. Or, you could sign up with the local model rocketry club and at least there you can swap stories about how far you got your rockets to fly and what are the best masturbatory techniques for banging it off right in time when the coxman nuts his load in the porno you plan to watch after you're done playing with your model rockets. You do have one thing down though: drinking. Keep drinking. At your age, it's all you've got. But hang in there, resist the urge to kill yourself. It will get better, trust me.

Money saving One Piece Boxset 1 in January (2014-09-13 08:04)

I was a fan of One Piece since 2005, but the box sets were far beyond my price range until January 2015. One Piece is better than Bleach and Naruto. I see Bleach and Naruto at Wal-Mart. Wal-Mart doesn't know One Piece is better in overall score at Internet Movie Database, because they're stupid. It's Walmart's world. I don't see Bleach and Naruto at Target. One Piece boxset 1 costs \$90 for 100 episodes. One Piece Boxset 2 costs \$90 for 110 episodes released in February 2015. That's 66 % off per episode over previous dvd collections

On Instagram.... finally! (2014-09-17 06:15)

They make it so difficult to get sign up. They make you download Android x86 4.4. Why can't Instagram be like Flickr?

Diablo 3 PS4 review (2014-09-17 06:41)

The game looks very pretty on PS4 (1080p). The DualShock 4 compliments well with the game play. For instance, you can get to inventory by pressing on the touch pad. The hot keys are displayed in the lower left corner, so you won't have to memorize which button to press to get to the execution/item you want. I chose to play as the witch doctor and the key difference to note here is in the PS4 version, you can actually flip and roll the character, unlike in the PC version (I believe only the demon hunters can do this in PC). When firing your weapon, you don't have to repeatedly tap the button. All you have to do is press and hold upon firing your choice of weapon. Obviously this review is based on the first couple of hours I have played thus far, as I just got this game today. So far, I am pretty impressed with it and I look forward to play the game going forward. 1) Local couch co-op is... a... blast! You and up to three other friends can bash away at demons until the wee hours of the morning and never want to stop. The drive for better gear and abilities drives everything, and it's contagious. The menus are well-optimized for console, but you may still have to be a little patient when playing local multiplayer. Everyone wants to get their character right, you know. 2) I bet I'm not the only one who can't stomach getting a gaming PC for one reason or another. The PS4 version looks a million times better than ROS on my MacBook Pro, and I can't imagine it looking better! No one would argue that the PC can give the best-looking experience, but at a cost. The PS4 never drops a frame. 3) Controllers work wonderfully in combat! The menus take some getting used to (and believe me, you'll spend a lot of time there), but you will get used to it. You'll get the most out of managing loot (particularly in local multiplayer when everyone has to do it) if you force yourself to tag the loot you plan to sell as "junk". You can bulk-sell your "junk" at merchants in one press. But back to combat, it's wonderful, yes, even for ranged characters! I'm loving my PS4 and Diablo III is an icing on the cake.

Peninsula State Park Door County vacation (2014-09-30 06:48)

Price gouging everywhere all while Fish Creek is having an annual merchandise flea market. Door County antiques are 80 % more expensive then the same thing on Ebay. Disney Snow White pictures cost \$450. I also went to Washington Island, and there was a car show in Bailey's Harbor, WI. Door

county is a lot better then Wisconsin Dells.

16.10 October

Top Halloween movies (2014-10-04 12:06)

I pick the older horror movies, because they get IMDB scores in the 7s and 8s while the ones after 1980 usually have 5s and 6s ranges for scores. That's the only reason. According to IMDB the new ones suck. I still watch the new horror movies, but these are in a different IMDB list. :)

1 best dracula ever Horror of Dracula 7.5 1958

2 Sleepy Hollow 7.4 1999

3 "Demons from hell, so politically incorrect. :)

It is nothing like Tom Hank's Angels and Demons which don't show demons at all. The demon in this movie looks cute!" Curse of the Demon 7.6 1957

4 Old and realistic ET plots. No zombies, just aliens. The 1982 version had tentacles, and aliens. I have Resident Evil, there is no ET plot in it. The Thing from Another World 7.3 1951

5 Real evil here. The Devil Rides Out 7.1 1968

6 An American Werewolf in London 7.6 1981

7 The Shining 8.5 1980

8 Tentacles and ET, better than zombies The Thing 8.2 1982

9 The Night of the Hunter 8.1 1955

10 Real evil The Exorcist 8 1973

11 The Curse of Frankenstein 7.2 1957

12 Invasion of the Body Snatchers 7.8 1956

13 real evil The Omen 7.6 1976

14 real evil Halloween 7.9 1978

15 The Innocents 7.9 1961

16 The Wicker Man 7.7 1973

17 The Haunting 7.7 1963

18 The Black Cat 7.2 1934

19 The Fog 6.8 1980

20 The Hound of the Baskervilles 7 1959

21 The Gorgon 6.5 1964

22 Dracula: Prince of Darkness 6.7 1966

23 Dracula Has Risen from the Grave 6.6 1968

24 Taste the Blood of Dracula 6.4 1970

25 not scary, but cool with Patton The Changeling 7.3 1980

26 Pit and the Pendulum 7.1 1961

27 real evil It 6.9 1990 28 Funny! House on Haunted Hill 6.9 1959

29 stupid fun Them! 7.3 1954

30 The Brides of Dracula 6.8 1960

31 Dracula 6.4 1979

32 Dracula 7.7 1931

33 Frankenstein Created Woman 6.6 1967

34 Dead of Night 7.7 1945

35 House of Usher 7 1960

"Moderates" skip voting moderate candidates again (2014-10-20 05:02)

Its deja-vu like the 2012 presidential elections where Americans stayed in home instead of voting for the Mitt Romney who was moderate already. For some strange reason, the employers won't allow employees to vote during lunch break. There's something wrong with having no time to vote.

The evangelical vote in America has been a key ingredient in deciding who becomes the Republican nominee for president. Polling bears that out.

Yet the social issues near and dear to the hearts of evangelicals are under attack within Republican circles.

A few years ago, former Gov. Mitch Daniels, R-Ind., wanted to declare a truce on the hot button social issues.

"All I was saying was we are going to need to unify all kinds of people. Freedom is going to need every friend it can get," he argued.

That's the line by some within the GOP who say that the only way the party can get more votes and win elections is by staying away from controversial social issues like abortion and gay marriage.

But Huckabee, who's considering running for president in 2016, told CBN News that ditching these issues may cost the GOP evangelical votes.

"It leaves them at home. They just don't go vote, which they didn't do very strongly in 2012. There were fewer evangelical voters who voted for Romney than McCain. If 10 percent more evangelicals had voted for Romney, Romney would be president right now," Huckabee said.

Nevertheless, many in the Republican Party appear intent on phasing out social issues.

Just this past week, the Nevada Republican Party stripped out all language pertaining to abortion and marriage.

And after President Barack Obama won re-election in 2012, a Republican National Committee document concluded the following: "When it comes to social issues, the party must in fact and deed be inclusive and welcoming."

But Huckabee suggested the GOP might want to rethink that strategy.

"This notion of 'don't mention those issues because you might offend the voters who are leaning left,' you better worry about who are you going to leave at home, cool off, and completely chill out the voters who just will say, 'Well, I really don't have anyone to carry the issues that matter for me,'" Huckabee warned.

Huckabee insists that social conservative candidates will need to stand firmly for their values and convince the party that issues like marriage and abortion are an important part of the total equation.

"I think it's a mistake to think that younger voters are going to make their entire election decisions on a candidate's position on same-sex marriage," Huckabee predicted.

"If a candidate can articulate the reason he's for traditional biblical marriage is because of his biblical viewpoint, then will they hold that against them anymore than they would hold it against a Muslim who won't eat pork or drink liquor? If they do, then the problem is bigger than what the position is; it's why they hold the position," he added.

Those pesky Ruskies with a 65 % debt to GDP ratio are friggin' commies. How dare they.

16.11 November

Downloaded Sega CD (2014-11-01 13:35)

I downloaded Popful Mail, and Shining Force CD, because they cost \$100 each. They would play in Fusion on PC. Popful Mail was a great Sega CD game from Working Designs.

Robo Aleste is a lot cheaper, but I have MUSHA for Sega Genesis. I found a DVD with my entire ROM collection on it. Roms cost nothing and you save money on expensive videogames. The hacker community knew our salaries were staying the same or going downward. There is always price gouging.

Owning the rom is better then seeing people go bankrupt on Youtube and having to sell their collection to pay off bank debt from the 3000 games he owns. I have a 1500 ROM game collection that fits on a DL-DVD. Half of these ROMs are already on SDcards Gamepark Cannoo and JXD handhelds.

bought 3DS XL (2014-11-03 10:22)

I had the regular 3DS since 2011 and I played New Super Mario Bros. 2, Mario and Luigi - Dream Team, Luigi's Mansion 2, and Mario Kart 7 on it. I also upgraded to GBA SP ten years ago. My GBA graduated high school with me. In high school, I played Mario Kart Super Circuit, followed by Castlevania Circle of the Moon, Castlevania: Harmony of Dissonance and Super Mario Bros. 2. Then I didn't upgrade the DS to DS XL, because I had to purchase PSP, PS3, Xbox 360 and Wii. I played each of those consoles for at least 15 hours each. I added Bravely Default to my collection due to the ranking on gamerankings.

If you like your portable gaming three-dimensional, clam-shelled and big, then Nintendo's 3DS XL fulfills those broad, unconventional requirements. It's a design refresh that more closely references both previous generations of DS hardware (and the incoming Wii U) - all while touting a substantially bigger, 3D-capable, parallax-barrier screen. Aside

from a larger battery, the XL's internals rehash what we first saw over a year ago: the controls remain the same, with no addition of a (mildly) hardcore gamer-courting second analog stick. For what it's worth, the device does arrive with a 4GB SD card in-box (up from 2GB in the original), matching the approximate doubling in physical dimensions. 18 months is a long time in gaming, especially these days, and although 3DS sales have recently rallied against Sony's latest, we reckon the 3DS XL has double the appeal of its forebear. We'll explain why right after the break.

Pros

Bigger screen improves the 3D effect significantly

Improved battery life under some conditions

More comfortable to hold and use

Cons

Digital content still lacking

No secondary analog stick

Not the most powerful of handheld hardware

Summary

If you've been holding off from buying a 3DS, the improvements to the screens and battery are enough to warrant a purchase, but some issues still remain.

Hardware

It's a huge relief to see Nintendo return to the cleaner, tidier lines of the DS Lite and DSi. Gone are the awkward tri-colored gloss and the angular, bizarre shape of the 3DS. Instead, it's now a simple, softly curved oblong, which looks more mature and considered. Closed, the 3DS XL's matte finish wraps around both halves – and unintentionally reminds us of Sony's Tablet P. Fortunately, the casing is far more solid than that Android tablet, and feels much slimmer. In fact the device's thickness feels (and measures) roughly equal to the 3DS, despite the explosion in screen size, improved battery life and a 46 percent weight increase to 336g (11.85 ounces).

While gamers with smaller paws may not agree, the 3DS XL feels more at home in-hand than the 3DS – not to mention, it looks a good deal classier than what came before. Thanks to those rounded corners, the device doesn't dig into your palms like its slightly squarish predecessor. The circle pad is still supremely comfortable, just the right side of tactile, while the faithful Nintendo button medley and D-pad still do the trick.

We don't understand why they couldn't have embedded another analog stick into the 3DS XL – certainly, it's not for lack of space

Even more than what's changed, it's what's still missing that baffles us. Given that the 3DS has been furnished with a secondary analog stick through a slightly unwieldy peripheral, we don't understand why they couldn't have embedded one into the 3DS XL – certainly, it's not for lack of space. Our review sample arrived with Resident Evil: Revelations in the slot – a game that's not very forgiving without that second stick. It's also worth adding that while the plastic stylus on the bigger hardware remains functional enough, we miss the classy, extendable chrome pen that arrived in the original 3DS. The collar buttons are just as responsive as Nintendo's preceding handhelds. And if you weren't a fan of the cheap-looking button trio underneath the secondary screen, you'll be glad to hear that the odd bar has been replaced by three more standard-looking – and feeling – buttons. The SD slot has been repositioned to the right edge, meaning that Nintendo's sticking with standard removable storage. There's also now a horizontal cubby for the aforementioned stylus, referencing the DS Lite and DSi of gaming past.

Displays

DNP Nintendo 3DS XL review Bigger is better, but it's still not quite enough

Bigger is better. Maybe it's our review-jaded eyes, but the larger, 4.8-inch screen (just shy of the width of the PlayStation Vita, although slightly taller) seems to make the 3D effect less taxing, not to mention more immersive. The similarly expanded secondary screen also offers more real estate for touch-heavy titles. The pair of screens, however, still looks a little incongruous, each boasting different sizes and dimensions. While matching the humble resolutions found on the original, we found the screens both had comparable (if average) viewing angles. The main screen may be 1.8 times larger, but it packs the same 800 x 240 resolution of last year's model – now spread a little thinner, with the more typical 'flat' 320 x 240 display also unchanged on the secondary.

Even if the 3DS XL doesn't win on crispness, however, Sony's onyx wonder can't (and never will) output 3D content. Purely number-wise, it doesn't sound impressive to anyone spoiled by Retina displays and the like. The screens on

the original weren't the sharpest back then, but the jagged edges on fonts and detail is noticeably more pronounced on the bigger model. It goes without saying that the Vita's screen is a stronger performer, both visually and technically (being capacitive and all). We presume this is why Nintendo imposed filming and photography restrictions on its reviews for the 3DS XL, even though pixel math dictates that the bigger screen won't look so hot close-up. Even if the 3DS XL doesn't win on crispness, however, Sony's onyx wonder can't – and never will – output 3D content.

Software

So apart from size, the hardware hasn't changed that much. The same can be said for the software, but it's a good chance to see how Nintendo's embraced online content and gaming in the midst of strong smartphone contenders. Since launching last March, Nintendo's baked-in software, including eShop, Spot Pass, Mii Plaza and online functions, have had time to grow and it's particularly noticeable when it comes time to interact with other users. During the first few months of use, you weren't going to pick up many Mii visitors – not unless you were hanging around gaming writers, tech bloggers and importers, anyway.

Now, whether we flit across the country by train or park somewhere in center city, we pick up new Miis – and accessories – in the process. Admittedly, the games that tie into this social component really aren't worth your time, but the simple process of connecting with other users – and being notified of it – still makes us smile. The uncomplicated approach makes online gaming a cinch. With access to WiFi, we could connect in-game with a single option selection and would soon be battling strangers with far greater skills than we could ever muster. The friend PIN system also allows you to connect with real-life competitors.

The augmented reality games are still baked into Nintendo's newest portable, although they haven't moved on in any way. If you've played with them on the original, you're getting the same deal again here. The Nintendo eShop has expanded its offerings since we last opened our online wallets for the 3DS launch, with its wares separated out for ease of navigation. "In Stores" houses demos of incoming 3DS titles, and is presumably where the full-length games will be housed in the near future. Next is the Virtual Console, wrapping up NES, GameBoy, GameBoy Color and (gasp) Game Gear titles for anyone over 20 to replay again. It's joined by software and mini-game channels and a recommended videos collection. Unfortunately, the likes of Netflix and Hulu weren't available on our review model here in the UK and overall it's still not as good as it could be. While it does give taste of how content will be sold through Nintendo in the future, we'd like those to be available now, not in another two months.

Battery life

Nintendo reckons you'll see around three to six and a half hours of gameplay from 3DS titles, and between five and eight for simpler DS games. In our experience, we managed an average of four hours of playtime in full-fat gamer mode, with the 3D switch and brightness cranked up to maximum, WiFi connected and around two hours of online play folded into our test. As even Nintendo forewarns on the console, how the 3DS XL is used has a huge impact on total runtime. Switch off the 3D mode, dabble with older DS titles and retro hits, and you'll see a substantial improvement in battery life. We did just that, also switching on battery saver mode and dropping brightness down to the middle setting, and got closer to nine hours of playtime – it's a substantial improvement but obviously means limiting your gamer habits to some extent.

Transitioning

Nintendo's explanation for the lack of an AC adapter in both European and (some) Asian countries is that most buyers will be coming from older hardware – naturally. Thus, buried in the settings menu, is the option to transfer your content – like your digital purchases – across from original 3DS consoles and the DSi. You'll need both devices and an SD card to get it done, and it feels like an exercise in frustration compared to the effortless systems in place for other gaming challengers like Google Play, which allows you to house your purchases on multiple devices without so much hassle.

Wrap-up

DNP Nintendo 3DS XL review Bigger is better, but it's still not quite enough

After playing with the 3DS XL, we returned to the original only to find it difficult and awkward to use in comparison. The new size is an improvement in so many ways, including ergonomics and playability. The bigger screen makes 3D gaming less tiring, and offers a larger sweet spot for Nintendo's all-important gaming effect, while the curved edges simply fit your hands better. Competition remains tough, however. The Vita remains clearly ahead technically, while Nintendo banks on its strong in-house software team to bring in the customers. Pitch Resident Evil: Revelations

against Uncharted, or Super Street Fighter IV 3D against Marvel Vs. Capcom 3, and it's clear to see on those big ole' portable screens which has the most potent hardware. But if you've been waiting out for a 3DS Lite before taking the plunge into 3D waters, then we can't help but recommend Nintendo's latest. We just hope the company can give its online content offering a shot in the arm soon, as it's really starting to age the hardware.

Governor Debate (2014-11-04 07:52)

IFRAME: [//www.youtube.com/embed/qvjoxN8yO2M](http://www.youtube.com/embed/qvjoxN8yO2M)

Be sure to vote for Walker. Abortion laws would bother me. I'm around these gays in minnesota. Why would I get a girlfriend if it had to end up in abortion anyway? I rather own a dog, its cheaper. I agree with my NRA friends about the 2nd amendment rights.

Generation Z plays with ADHD medications to screw Generation Y over (2014-11-05 10:47)

Most of us have a terrible time focusing on our work. Left uninterrupted, we are likely to interrupt ourselves. The Internet, everyone's interrupter of choice, is the most tantalizing type of reward system to our brain: intermittent but unpredictable rewards, in the form of a randomly great video or a juicy email here or there. (This is also why kids love to whine to get what they want. Parents give in only when they are at their wit's end, creating, from a child's perspective, a similar, randomly yummy reward system.) Each time we interrupt ourselves at work, the process to get us back to that point of focus takes twenty-five minutes. So we spend nearly a third of our work day recovering from interruptions, trying to recover our focus. The time management gurus are all over this problem. Winifred Gallagher is the author of Rapt: Attention and the Focused Life. The thesis of the book is that the ability to positively wield your attention is the key to your quality of life. Gallagher says (in either her book or in the article that I am liberally quoting from — I'm not sure which, but I am distracted enough by the issue that I feel compelled to distract you as well) "You can't be happy all the time but you can pretty much focus all the time. That's about as good as it gets." That sounds true to me. We each have a certain amount of attention, and our quality of life depends on how wisely we invest our attention. I have written about how self-discipline is the key to happiness. And then I have written about how knowing that has not helped me much because self-discipline is not an easy nut to crack. Now I am wondering if attentiveness is the way to achieve self-discipline. You find your goal—the stuff that is really super important—and you focus on it. That focus creates enough self-discipline to do what you need to achieve the goal. But that isn't just my idea. There are others thinking the same thing. Merlin Mann has one of the most popular productivity blogs, and he's raking in money teaching executives (who surely are too focused to have time to read blogs) to be more productive in their workday. Merlin Mann says that the key to productivity is attention, not lifehacks. Here's a gem from Mann's interview with Anderson in New York magazine: "On the web there's a certain kind of encouragement to never ask yourself how much information you really need. But when I get to the point where I'm seeking advice twelve hours a day on how to take a nap or what kind of notebook to buy, I'm so far off the idea of lifehacks that it's indistinguishable from where we started. There's very little advice right now to tell people that the only thing to do is action, and everything else is horseshit." Okay. So notice this about focus: You are not actually able to be productive without focus. So we can stop looking for the ultimate moleskin notebook or the perfect Firefox extension because those are actually productivity distractions. The hardest thing about productivity is figuring out what is the number one thing on your to do list. After that, you need to focus on doing that one thing. Mann says, "There's no shell script, there's no fancy pen, there's no notebook or nap or Firefox extension or hack that's gonna help you figure out why the fuck you're here." Maybe what you need instead is Adderall. Officially, Adderall is prescribed to treat ADHD. Unofficially, it is the drug of choice for

Gen Y. Adderall, or other drugs that treat ADHD, give a typical brain an intense ability to focus for long periods of time. I got most of my Adderall information from a great article in the New Yorker by Margaret Talbot titled Brain Gain: The underground world of neuroenhancing drugs. In it, Sean Esteban McCabe, from the University of Michigan's Substance Abuse Research Center says that at some universities, up to 20 % of the population is using these drugs: "White male undergraduates at highly competitive schools—especially in the Northeast—are the most frequent collegiate users of neuro-enhancers." Anjan Chatterjee, a neurologist at the University of Pennsylvania, coined the term "cosmetic neurology" to describe the trend of taking drugs to enhance ordinary cognition. He says, "Many sectors of society have winner-take-all conditions in which small advantages produce disproportionate rewards." That resonates with me. I have already decided that cosmetic surgery is a must-have career tool for the high performers. So why not consider cosmetic neurology as well? Joshua Foer wrote about his own Adderall experiment in Slate, and it sounds glorious: "The part of my brain that makes me curious about whether I have new emails in my in box apparently shut down." So I decided that maybe I should give the Adderall a whirl. But then I started getting worried. Because I read research from Nora Volkow, director of the National Institute on Drug Abuse that shows Adderall is addictive. Not addictive like crystal meth. But addictive like, if you have a proclivity to addictive behaviors, you are a sitting duck for this one. "Because drugs that increase dopamine have the potential for abuse, these results suggest that risk for addiction in vulnerable persons merits heightened awareness." That scared me. But what really scared me is that the cost of gaining extreme focus is often losing extreme creativity. A good example is Paul Phillips, a professional poker player who won more than a million dollars after taking Adderall to help him. The scary thing about the Phillips example is that Adderall also helped him resist the impulse to keep playing losing hands out of boredom. I think we have some of our most creative moments when we are doing odd stuff to quell boredom. That is, when we are not focused at all. "Cognitive psychologists have found that there is a trade-off between attentional focus and creativity," says Martha Farah, director of the Center for Cognitive Neuroscience. "There is evidence that individuals who are better able to focus on one thing and filter out distractions tend to be less creative." Maybe it's better just to do lots of things at once without great focus but with natural creativity. Focusing on focus seems to distract from the real issue, which is knowing what you value most. Do we know that? And if we did know that, maybe our focus would come naturally from that. And our lack of time management comes from a lack of self-discipline which comes from a lack of focus which comes from a lack of knowing the meaning of life. And we'll never know that. So maybe we should just be happy that we have our lack of focus because that enables our creativity. And we don't know the meaning of life, but we do know that we each get to create our own life, and that, in the end, may be the only guarantee we have.

high school plagiarism (2014-11-05 13:13)

I caught my high school class copying my ideas and alienating me. They steal my Linux, my videogames bragging right ideas and they still alienate me. The town I was located in St. Croix County says it all, but for some crazy reason it has no law binding affect to that local high school class (which is supposed to know me, but pretends not too)

Bankrupt videogame companies (2014-11-15 21:00)

In many ways, the video gaming industry has never looked more promising: smartphones and tablets have massively expanded the addressable market; wearables (including virtual and augmented reality devices) are enabling new interaction models and experiences; and user generated content allows studios to add depth and re-playability at little-to-no cost. In 2013, the industry generated more than \$65 billion in revenue – representing a nearly 30 % increase in only 5 years and totaling 82 % more than the global box office and 3.2 times the size of the recorded music industry. Despite this, brand-name studios – including some of the most celebrated and commercially successful ones – continue to hemorrhage or shut down entirely.

Mobile is only a part of the reason why. Over the past decade, the video game industry has been fundamentally

upended:

Led by the Nintendo Wii, the seventh generation of video gaming was the first to really achieve mass market adoption. As the console base proliferated, the industry benefited from a nearly 350 % increase in annual unit sales – from under 150M in 2006 to 630M only four years later. Yet, this trend abruptly reversed itself in 2010 – and industry volumes have since fallen to fewer than 460M units. Over this same period, we’ve seen an even greater reduction in industry output: 48 % fewer (non-mobile) games were released in 2012 than in 2008 (accurate estimates for 2013 could not be sourced). See-sawing demand and competition typically challenges industry economics, but in fact, these trends have provided the industry with a shockingly consistent increase in average unit sales per game:

In theory, this should have driven industry stability – but over this same period, studios have had to contend with exponential increases in ‘tablestake’ investment costs. In the early 1990s, game development required only a handful of programmers, designers and artists. However, the sophistication of modern gaming engines and ever-rising graphical standards have driven this figure into the hundreds. Some blockbusters, such as Call of Duty and Assassin’s Creed IV, have even exceeded 1,000 (with each team member having a total annual cost of roughly \$100,000). Once-modest marketing expenditures have also grown to rival those of major motion pictures. All in, 2013’s Grand Theft Auto V is believed to cost nearly \$265M – placing payback sales volume at roughly 10M units (25x average sale volumes). Though GTAV is an outlier, few studios can still afford to develop 2-3 ‘average’ blockbuster titles per year – and a single failure can be ruinous. Furthermore, these titles still need to compete against the likes of Assassin’s Creed and Grand Theft Auto for finite consumer spend.

The normal recourse for this cost creep is raising prices, which remain largely unchanged from the early 90s. In fact, prices have actually eroded by 38 % over the past twenty years after accounting for inflation. As a result, today’s studios feel pressure on both the top and bottom lines. Increased sales per game have helped, but they’re insufficient in and of themselves. With this in mind, it shouldn’t be shocking that there has been such dramatic reduction in the number of market participants. But the gaming industry has not just more financial precarious, it has also become more complex.

Over the past five years, the traditional gaming categories, PCs and consoles, have shrunk by nearly \$1.5B. During this same time, online and mobile have both doubled, generating an additional \$12B and \$5B in revenue per year. While mobile has primarily cannibalized time and spend from traditional gaming forms, online has had the most profound impact on veteran gaming studios. Like motion pictures, video games have evolved from a product to a recurring service:

While games used to follow the standard media product lifecycle, they've transitioned to a new model where the goal is to drive (and monetize) ongoing usage. Activision Blizzard's *World of Warcraft*, which generates revenue through online monthly subscriptions (and soon in-game transactions too), did not reach its peak quarterly user base for nearly five years – at which point quarterly recurring revenue had increased 1,400 % over its Q4 2004 release. Though this growth was supported by sequel-esque expansion packs (in Q1 2007 and Q4 2008), the franchise's 'Entertainment as a Service' value is proved through its ability to both sustain and grow paying subscribers in the 26 and 22 months paid months in between releases.

The success of WoW and other EaaS games (not all of which are MMORPGs) explains many of the aforementioned trends:

- By increasing the amount of time the average player plays per game purchase, total industry unit sales are likely to drop
- The focus on developing and establishing blockbusters (which require far more depth than an average 15 hour game) drives studios to reduce the number of games they produce and increases development costs per game
- To meet lofty payback targets, publishers amp up initial marketing costs
- To sustain user engagement, marketing and promotion expenses (tournaments, advertising, developer programs etc.) long after a game's initial release

What's more, studios need a far greater skillset than ever before:

"Then"	+ "Now"
• Game design • Programming • Licensing • Testing - Etc.	• Staging / collective experience building • Customer relations • Monetization engine (including in-game economies, gamification) • Uptime / service provision & management • UGC facilitation, development and management • Player events • Bugs and patches • Billing - Etc.

Notes: (1) Inexhaustive; Illustrative

@LiamBoluk

Until recently, game production was straightforward: a studio would design, build, test and perfect a game – there was a "ship and forget" mentality, to use industry terminology. Unfortunately for many, the Entertainment as a Service world is far more complex: Studios/publishers must manage customer relations, foster user generated content and experiences, design and oversee complex in-game economies (which may generate up to 100 % of the game's revenue), provide ongoing patches and bug support and so on. Even the classic skillset of game development is strained: Guild Wars 2 developer ArenaNet has pursued a 2 week content release cycle in order to drive user engagement.

Whether the game is even getting paid for these “services” depends on the game; many users expect it for free after paying for \$60 of content. As a result, many games have team supporting for at least a couple months after release. In addition, games that were unable to achieve the necessary user scale are often made free-to-play in hopes of increasing engagement and in-game commerce – further challenging industry economics.

There simply aren’t many studios with the skillset, IP and balance sheet to compete in this new market. As a result, we’ve seen a dramatic thinning of the “middle layer” of studios. The largest studios (such as EA, Bungie, Rockstar) will continue to survive, as will niche developers and lean mobile shops. However, we’re likely to see mid-market players continue to exit (which will drive further reductions in industry output).

For all its promise, non-mobile game developers face a harsher reality than ever before. Though consolidation will drive back office synergies and some increased talent utilization, it will not resolve the aforementioned issues. Premier developers, such as Activision or Rockstar, would no doubt love to increase prices. Yet, this would inevitably initiate price-based competition in an industry already moving to free-to-play models in order to maximize the total userbase.

To survive, studios need to acknowledge the reality that content creation, curation and consumption is being democratized. For many executives in the media & entertainment industry, this concept is anathema; they believe that their veteran experience and instinct can pick ‘winning’ game concepts and turn them into blockbusters. Even if and when this is true, the final game will fall short of its potential if it remains tightly controlled. To quote Gabe Newell, Co-Founder and Managing Director of Valve: “Games are essentially going to be nodes in a connected economy where the vast majority of digital goods & services are user created vs. created by companies... Our users have already outstripped us spectacularly... They’re an order of magnitude more productive.” How can a studio fight back spiraling development, marketing and support costs? It doesn’t. It outsources them to users.

Jamie Bisch (2014-11-20 08:34)

I never had the chance of succeeding in the most popular Internet celebrity in my class. One commanded Century College’s HR department and the other coached a NCAA Basketball team. Jamie Bisch and Meghan Hahella have Masters degrees. My high school class doesn’t want me to exist right now. There was too many people with an IQ of 120-130 trying to erase me from existence in my high school class. It didn’t work, but it almost did.

Homebrew channel now operational (2014-11-29 06:44)

I had the roms for a long while, but now I have all the emulators. I ran these SNES and GENESIS emulators on Playstation 2 ten years ago and Playstation Portable eight years ago. Wii now plays my V64 roms.

16.12 December**Owns Chrono Trigger Crimson Echoes (2014-12-06 03:20)**

This sequel to Chrono Trigger was 98 % done and in development for 5 years. Everybody likes it. Chrono Trigger 2 has a 4.7 out of 5.0.

Lets look beyond those and look at the game itself, the parts that were actually completed. The plot line weaves a very compelling main narrative in which the heroes are summoned to put a stop to King Zeal. How was he resurrected? It turns out to be a friend rather than a foe that did the deed. While the original Chrono Trigger plotline focused on bending the rules of time to protect history, this sequel has much heavier undertones with regards to the consequences of one's actions in time. The party triggers a timeline change in the past while battling King Zeal, and must consign an entire future of Reptite Kingdoms that spawned from the change into nothingness. Crimson Echoes does a terrific job of bridging the gap from Chrono Trigger to Chrono Cross in it's storyline. It doesn't do quite as well at wrapping up the loose ends. For instance, a sidequest to start Lucca's orphanage was left woefully underdeveloped and felt tacked on, while the game's idea of why Crono and Marle wind up appearing in Chrono Cross will make you think of the term "magic bullet" pretty quickly. The aesthetic changes will either leave you cold or strike you as good ideas. One of each from me: I don't mind at all that Crono learns to talk in this game, and as I read up on the reasoning behind it, where the group wanted multiple characters to shine, it struck me as a fairly well-thought out plan. On the other hand, Frog loses his middle ages accent and text because it isn't there in the Japanese version of the game. While that's all well and good, he loses a lot of his character in the switch. His dialog rings hollow and he speaks at times in a way that makes you wonder why the change was made at all. I don't have any problem with them making him a little less stereotypical, but there are ways to do that without making it feel like he loses who he is in the process. I just felt like I had a stranger in my party. One of my big pet peeves with Crimson Echoes is the amount of original areas made inaccessible. I don't need every place in the world to be a gateway into a new sidequest, but would it have been so hard to keep the Dactyl Nest or the Denadoro Mountains in 600 A.D.? Post some guards out at the gate and come up with a magic bullet idea about why the party isn't allowed in if need be. It just feels weird to navigate familiar world maps without access to every area. You'll look for openings in mountains for minutes before you realize that something is gone. Then when some areas are beaten, they simply vanish from the World Map as if they never existed. Awkward. The basic game play is unchanged, but through a lot of the game you'll feel like the difficulty has been knocked up a notch. Partially this is because it has, but actually it's because for a lot of the early

game you don't have three characters in the party most of the time. If you thought the Black Omen was difficult, try having to go through an entire forest when your party is Marle solo. You start learning just how many Ice spells it takes to kill an enemy pretty quickly, because there are a lot of eight minute battles involved. Some characters are given new moves, but mostly they retain their earlier skills. Magus got a pretty good makeover in terms of his learned skills, mostly because he loses all the multi-target elemental spells, but the characters as a whole average around two or three skills changed up. One of the best things the game has going for it are the new areas and maps. The Reptite timeline has a slew of wonderful designs, and Singing Mountain is an incredible dungeon. They pass the smell test for sure, and you never question whether they are part of the game or not. At least after you find it, in Singing Mountain's case. The final dungeon did a terrific job of integrating the idea of The Dead Sea from Chrono Cross with the sixteen-bit technology of Chrono Trigger. Wander too far off the map and you'll suddenly find yourself moving from a castle that you erased to a portion of 2300 A.D. that died after you beat Lavos in Chrono Trigger. I'd say this game rates a solid 8.3-8.4 on my scale. The flaws are very noticeable, but it's hard to keep down a main storyline that's this good. Contrast this to say, Final Fantasy 4's The After Years, which could only be considered a truly good game if you played it with nostalgia, and I think you'll find that Crimson Echoes is a better game. I wouldn't call it a must-play, but if you still harbor any feelings for Chrono Trigger, I think it's worth the 40-50 hours it will take to finish and the 2-3 hours it takes to find a copy of the 98 % version. It's a very ambitious vision that is still completely playable even though it wasn't finished.

Puppy! (2014-12-18 15:05)

My dog is a genius. She can be naughty. I'm crate training her. She sings a lot, barks and howls.

Rebuying videogames or vacationing never increased my status. (2014-12-24 01:06)

When I was younger, I used to rebuy videogames for Virtual Console on Wii and multiplatform videogame titles across PC, Xbox 360 and Playstation 3. I figured that these are for first time buyers who are younger than me. For example buying Half-life 2 for PC and then PS3. Then I play 16-bit roms in PC emulators and 32-bit videogames in PC emulators/Cannoo/Android, because I don't want to rehook the consoles to my tv.

After I found that my popularity didn't increase after multiplatform titles or upgrading DVD. I realized that repurchasing the same titles didn't matter from a hitcounter and subscriber standpoint and stop upgrading to Bluray altogether. Pressed discs have a lifespan of 100 years No one is hyping Bluray, Advanced Audio Coding, and Xbox One around here. I wouldn't buy a new car, because I can post a Koenigsegg Agera R on Pinterest for free and get slightly less attention as the new car I bought.

Constantly looking at Flickr and Youtube at English speaking monarchies scenery and news broadcasts completely killed my interest visiting them in real life for budget reasons. The pictures are free, and I could Photoshop myself in them to get the same amount of attention online.

Christmas (2014-12-25 14:16)

The only console I don't have in my collection is Xbox One so I bought that today with \$300 birthday cash and then \$120 from the savings today. Halo 5 will be pretty awesome.

My PS4 has 6 games already. I guess all I am missing is people. I obviously have updated to the peripherals. I believe the Kinect is dead. Now I own all of them. Last generation, I bought Xbox 360 first in 2005 and then Wii last in 2007. I bought this generation in complete reverse. (Wii U first 2012, PS4 2nd and Xbox1 3rd. I also got a 2nd Dual Shock 4, a BDRE drive, and Last of Us Remastered.

It's election year! PS4 holds the edge of sales worldwide. Xbox One has a slight edge of 22 states in the United States.

\

I got a Hyosung ATV for a graduation gift, because of the evidence Facebook users around here already had more than one already.

Consoles make a comeback in 2014 (2014-12-27 06:11)

The last few years of the previous console generation were generally pretty bleak. The Xbox 360 and PlayStation 3 had been on the market for the better part of a decade, hardware and software sales were plummeting, and some felt innovation was falling by the wayside as developers eagerly looked for fresh platforms to spark creativity. Indeed, Ubisoft chief executive Yves Guillemot was one among a number of key voices at publishers who felt that the console cycle had dragged on past its welcome.

"We need new consoles and at the end of the cycle generally the market goes down because there are less new IPs, new properties, so that damaged the industry a little bit," he said at the end of 2012.

Fast forward to this holiday season, and it would seem that the calls for new consoles to revive the business were largely accurate. Looking back at 2014, it's clear that excitement for the PlayStation 4 and Xbox One drove the AAA market. In every NPD Group report we covered, hardware sales skyrocketed as consumers simply couldn't get enough of the new consoles. Microsoft has shipped 10 million Xbox One units as of November, while Sony's PS4 installed base is close to 14 million now. By comparison, during their respective first years, the Xbox 360 sold fewer than 8 million units and PS3 had shipped around 10.5 million.

The difference between the seventh and eighth generations of course is that Nintendo's console platform suffered a precipitous drop. While the original Wii caught lightning in a bottle and soared to 20 million units in its first year alone, the Wii U - now completing its second year on the market - has yet to even reach half that figure (sitting at 7.29 million as of the end of September). That said, even Nintendo is now feeling some momentum and analysts are expecting it'll have its best holiday in years, driven by Super Smash Bros., Mario Kart 8 and new revenue sources like Amiibo.

"The landscape is changing, and the platform is becoming the retailer itself, much to the chagrin of companies like GameStop"

On the software side - at least in terms of the AAA market - Guillemot's hope that new consoles would drive more successful new IPs has proven partially accurate. While we've seen commercial successes like Watch Dogs, Bungie's Destiny, EA's Titanfall and a solid showing from Insomniac with Sunset Overdrive, there were others that performed average at best - Knack, Ryse, etc. - and the rest of the market has been saturated with the same AAA franchises we've grown accustomed to (Assassin's Creed, Call of Duty, Forza, Dragon Age, Far Cry and more). The good news is that anticipated new IP like Evolve, No Man's Sky, The Order 1886, Bloodborne, The Division, and Quantum Break, to name a few, is still coming.

The bad news is that console software no longer "just works." In the old days, you'd choose console over PC because you knew that when you put in that cartridge or disc, it would boot up and you'd be playing shortly (longer load times notwithstanding) without significant errors. Now, with eighth generation consoles more connected than ever before, you're often confronted with day one patches, mandatory updates to make anything playable online, and even then you may run into problems, as evidenced by the troubles encountered by Drive Club, Assassin's Creed Unity, Master Chief Collection and more. This is really the subject of a separate editorial, but if publishers continue to ship broken products, they should at least treat them like unfinished games and charge far less, effectively beta testing with users similar to Steam's Early Access.

The more exciting element of the new consoles essentially being always-on is that digital gaming is reaching new heights. On the AAA side you can buy any major release digitally on day one, and indeed digital sales are becoming a larger and larger portion of a title's total. Some of the year's top games took in 20 percent or more in digital receipts - and that's great news for publishers who receive higher margins on digital sales. The landscape is changing, and the platform is becoming the retailer itself, much to the chagrin of companies like GameStop.

On top of the AAA business, Sony, Microsoft and Nintendo have all made great strides in bolstering their digital storefronts, offering numerous titles on a smaller scale, often from indies. Sony, most of all, has capitalized beautifully

on this, luring in indies and grabbing the attention of gamers with free games as part of PlayStation Plus. The focus on indies has not only helped to diversify consoles' offerings in the early part of this console generation, but it's also served to offset some of the gaps left by the still-in-development or delayed AAA IP.

So where do consoles go from here? Needless to say, judging Xbox One and PS4 on just one year of sales isn't going to tell us where they'll be in five or six years. But barring a major surge in 2015 and beyond, it doesn't look like the eighth generation will significantly outperform the prior generation. In fact, Wedbush Securities' Michael Pachter expects around 240-260 million consoles to be sold when it's all said and done. The Xbox 360, PS3 and Wii combined for 260 million, so the eighth generation ultimately could see flat sales. "So it's not a growth industry. For everyone in this room not chasing that market, you're going to be fine. The market is going to get a lot bigger, just not on console," he said at the recent Game Monetization conference in San Francisco.

Indeed, the overall gaming pie will be getting much, much bigger, thanks to the booming mobile/tablet sector. A new IDC Research report points out that the smartphone and tablet gaming installed base has topped 1 billion in 2014. So consoles obviously are becoming more of a "niche" market, but that's not really a fair word either. 260 million units is hardly small potatoes, and ultimately, if you make a unique and innovative console game you can still be incredibly successful without chasing the mobile scene.

In 2014, consoles put their foot down, shouting "I'm still here and I'm not going anywhere!" It remains to be seen how they'll fare over the long haul, but memory constraints on devices and bandwidth troubles online will make it difficult for them to be replaced by any phone, tablet or streaming service any time soon. Moreover, if virtual reality does begin to take off, consoles could have another exciting avenue to pursue as we've seen with Project Morpheus (no expensive gaming PC rig required). And perhaps then motion controls like Kinect and Move, which - let's face it - were essentially swept under the rug in 2014 will be given new life as VR accessories.

Pressure from other platforms and technologies isn't the only challenge consoles will face, however. It's ultimately the business model that will have to evolve in order for the industry to really move forward. Mobile has been dominated by freemium, which isn't always ideal, while console often asks too much of its audience with \$60 purchases and a flow of DLC add-ons. Customers deserve more options. As Xbox co-creator Seamus Blackley told us a year ago, "What we need is the next generation of business infrastructure to make [innovation] possible. And iOS isn't doing a great job at that. There needs to be new excitement injected into the console world to provide more infrastructure for that to happen."

17. 2015

17.1 January

2015 (2015-01-06 22:20)

1) Wearables continue to tank

This is yet another case of the industry looking for new growth opportunities and a chance to expand by driving something the public doesn't really want. People don't want another device to carry or remember to wear, they are often inaccurate, and the newness wears off quickly and they get tossed in the drawer.

2) IoT proves a hard sell

Take what I said above and multiply it by 10. I don't know anyone screaming for an Internet-connected refrigerator. Then again, Steve Jobs did famously say "A lot of times, people don't know what they want until you show it to them." But with concerns about privacy by government and corporate snooping, security from all the hacks and general public tech illiteracy (the Silicon Valley is so myopic about this), IoT will be a hard sell.

3) BYOD chickens come home to roost

Many firms established BYOD rules when the trend first began, and they never revisited them. Eventually, there will be a reckoning where companies have to set down rules concerning data security and loss prevention, not to mention who pays the bills. It's only a matter of time before we get stories of employees giving up on BYOD and telling their boss to just provide a device.

4) Stock market crash and burn

The stock market has been going gangbusters, but it won't last. Every seven years, the stock market melts down like Chernobyl. We all remember 2008, and the recent "Cromnibus" budget deal in Washington has set us up for a repeat. In 2001, it hit the skids due to the Dot Bomb crash and 9/11. In 1994, the bond market went into the toilet. And in 1987 we had Black Monday with the massive sell-off. And if you don't believe me, maybe this guy's words will carry weight.

5) AMD finally bottoms out, Qualcomm acquires it for IP protection

AMD is in a real tough spot. Its CEO change caused a collapse in confidence and stock, neither of which has bounced back. Nvidia is gaining market share and is now over 70 %, according to Jon Peddie Research. There are hints of big things to come but nothing concrete, and the company has been through endless rounds of layoffs.

Nvidia wouldn't be allowed to buy the company, unless it was torn in half and it got the x86 business (and CEO Jen-Hsun Huang has repeatedly said he doesn't want an x86 business), with the GPU side going to Intel. A more likely outcome is Qualcomm grabbing the company primarily for IP protection against Intel.

6) IT continues to dump its own data centers in favor of the cloud

The trend of shutting down an on-premises data center in favor of a cloud solution has been going on for some time, but it will take off in 2015 for one very good reason - Windows Server 2003 is reaching its end of life and there are 10 million 2003 server installations out there that need upgrading. Many companies may decide it's easier to move to the cloud than buy new servers and go through a rip-and-replace routine.

7) Windows 10 is a hit, mostly

Windows 10 seems to have a lot of warm and fuzzy feelings around it, and it will likely revive PC sales, especially in the enterprise. The only thing that will mute Windows 10 at this point is declining interest in PCs. If the trend toward tablets as PC replacements continues, well, there's nothing Microsoft can do about that except get the tablet experience right, which it seems to have done with Surface 3.

8) Big Data's growth will be hampered by talent shortages

Big Data is an important new trend in tech, but it's also a significant change in how computer science is done. It requires people with specialized, advanced degrees, and there are not a lot of them on the market. In fact, there have been repeated predictions of talent shortages of data scientists and other people to make Big Data work. The

people who have that kind of experience, however, will make some serious money.

9) Tablets will crash and burn

Tablet sales are already slowing down and the trend likely won't reverse in 2015. Some experiments have failed, like the Los Angeles Unified School District's \$1.3 billion tablet boondoggle. I expect as the batteries start to die on these things and they are not replaceable, that will also hurt. The main problem, though, is that tablets don't have an advocate. Steve Jobs was the big champion of the tablet and no one has stepped forward to take up the mantle.

10) MMOs start dying off

My one consumer prediction. For some time now, every game company and a whole bunch of startups had massively multiplayer online games in the works. Then they all started failing. "Star Wars: The Old Republic," "Final Fantasy XIV," and "Elder Scrolls Online" all bombed recently, and when an "Elder Scrolls" game bombs, that's a big warning. Many other MMOs have faded into nothing. And Blizzard killed its MMO codenamed "Titan" after seven years of R & D. The reality is these games demand too much time and people who play them frequently suffer from health problems for their addictions.

The most entitled generation is Babyboomers! (not me) (2015-01-11 13:35)

That generation is the millennials – our generation are the most unemployed in american history.

The culprit, say some social commenters, are millennials themselves. In this telling, we are a lazy cohort of entitled and narcissistic brats — the proverbial Generation Me. But this is a classic case of blaming the victim.

The true cause of this unfortunate situation is clear: It's the economy. The Great Recession stymied economic growth, halted job creation, kept older Americans in the workforce longer, and encouraged younger Americans to continue debt-financed schooling.

Moreover, the Great Recession was not merely a one-off calamity — it was a symptom of economic ills long perpetuated and ignored. And the criticism and labels that have been heaped upon millennials bear much more resemblance to the type of intergenerational stereotyping that has always existed ("darn kids these days") than to any measurable reality.

The truth: The economic tragedy of the Millennial generation was written before many of us had even learned to read — Baby Boomer parents and grandparents who, at once, genuinely love and care for us, but have also created or perpetuated institutions, policies, and economic realities that have now hobbled us.

Our generation has been called "entitled." We beg to differ. If any generation is entitled, it's our parents' and grandparents' generation: the baby boomers.

True entitlement is tripling the national debt since the 1980s and using the proceeds to spend lavishly on tax cuts and government programs that primarily provided short-term economic boosts, while refusing to raise the Social Security age of retirement or to reduce benefits, even as the gluttonous program careens toward unsustainability.

AAP Image/NEWZULU/ZOE

A protester at recent Australia climate-change rallies in the lead up to the UN climate summit in New York.

True entitlement is allowing the reasonable minimum wage that Baby Boomers enjoyed when they were our age to deteriorate while opting to cut taxes on the gains from stocks and bonds that they accrued during periods of debt-driven economic and stock-market surges — creating an economy where wage earners at all income levels, as of 2012, receive a smaller portion of economic output at any time since 1929.

True entitlement is, for decades, enjoying the benefits of the lowest energy costs in the world while refusing to price-in the external costs of carbon emissions, exacerbating the real changes to our planet that pose profound risks to the environment and economy for which millennials will soon be the primary stewards.

These grave consequences were entirely foreseeable — but they happened. Young Americans have been fleeced in order to fund the transient excesses of the old — and yet millennials are labeled “entitled” because we were given “participation trophies” and “personal tutors” before we were old enough to vote ... ?

Give us a break. Millennials are not entitled. But we are frustrated.

We’re frustrated, because the same baby-boomer bloc that created or tacitly perpetuated the policies that have hamstrung millennials now makes up almost a third of the American voting-aged population and holds nearly two-thirds of the seats of the US House of Representatives and Senate. This, during a decade-long span when incumbent House and Senate members are richly rewarded for being the most unproductive legislators in US history, respectively winning reelection 94 % and 87 % of the time.

ITU/Rowan Farrell

Granted, many members of our generation need to learn how to vote every two years, not just every four. And we need to begin to fulfill the civic-minded label — “The Next Great Generation” — which social scientists have bestowed upon us. When we do begin to regularly share our opinions in the voting booth, not just on Twitter, you can be assured that we’ll act to keep this country great. We’ll make the “hard” choices the baby boomers have refused to make.

Already, we’ve learned how to be fiscally responsible — with the most student debt of any generation in history, we’ve had to. More than any other generation, we eschew expensive possessions like cars and large houses, opting instead for bikes and shared living spaces. Sure, we would like to own all that fancy stuff someday, but we realize that we can’t have everything we want.

We know that our government would be better off spending more of our tax dollars on jobs and education, and not just on Social Security and defense. We overwhelmingly recognize that the war on drugs has been an embarrassing waste of money and lives, and that anyone should be able to marry whomever they love.

Perhaps we millennials are entitled: We seemed to think that baby-boomer politicians would enact much-needed changes while we fiddled with our smartphones. We were definitely wrong on that one.

Bought some overdue Retro Bit Super RetroTRIO (2015-01-13 21:55)

I bought a Retro Bit Super RetroTRIO Video Game System for playing 16-bit videogame carts. I watched so many youtube collections or speedruns with 16-bit videogames and Room of Doom website, where getting rid of any of 16-bit, Playstation, Saturn games gets rid of my karma I spent money on. Unlike my FC Twin I bought 10 months ago, this Retron 3 also plays Sega Genesis. The FC Twin is \$80 now and a Neo Geo X system is \$150. I remember when FC Twin was \$30 5 years ago.

If FC Twin is going to end up like Gamepark Cannoo and cost \$300, I'm glad I got it now. Owning since 2014

Owning since 2015 and the build quality is great.

I lost my Action Replay for Saturn to play Radiant Silvergun, DoDonPachi I also bought Super Smash Bros. for Wii U. The RetroTRIO and the Neo Geo X game system bought in 2012, I supposedly increased my karma. Some of the 16-bit games are worth \$60 in good condition so I don't know why women don't like old games. I bought a Retro Bit Super RetroTRIO Video Game System for playing 16-bit videogame carts. I watched so many youtube collections or speedruns with 16-bit videogames and Room of Doom website, where getting rid of any of 16-bit, Playstation, Saturn games shrinks the karma. The karma these days aren't like on Playstation Universe.

Videogame reviews killed my videogame job (2015-01-23 19:39)

The negative reviews at IGN.com (6 years ago) and Gamespot ultimately decided my career. I grew up with N64 and looking at what happening to Wii U and console. It wasn't a good fit. I like collecting them and completing them. Also the industry looks to be changing constantly and the turnover seems higher than information technology. The gamespot and the IGN blogs were testing this industry for FREE! It seems as though these are pretty dark times to be

working in the gaming industry. Square-Enix and Capcom have seen much better days. Far from their 90's glory, but I don't think they will fade quickly. However, the gaming public is sick and tired of paying \$60 for crap games only to have to spend more money for DLC. , cause everyone loves those shallow pointless games. was once a huge Final Fantasy fanboy but Squaresoft was purchased and the series has gone to hell, so there goes my interest for a console. A 360 would have interested me for Lost Odyssey but one game isn't worth a \$400 bill. The gaming industry never ceases to amaze me with its stubborn refusal to adapt to market demands and its inability to learn from its peers in the entertainment industry pertaining to its current hot issues. It's probably going to take a few more major firms going under and/or splitting up before they get their acts together.

As CEO of Sega of America in the early 1990s, Tom Kalinske oversaw the company during its glory days, when all eyes in the industry were glued to the titanic struggle for console superiority between the Super Nintendo and Sega Genesis.

Times have changed, to put it mildly. Kalinske left Sega in 1996 and soon signed up with educational entertainment company LeapFrog, where he remains a vice chairman today. The intervening decades have seen Nintendo's best days as well as its worst, and the company sits in a distant third place in the current console race. Meanwhile, Sega hasn't been the same since Kalinske left. The Sega Saturn bombed. The Dreamcast signaled an end to Sega's days as a first-party hardware maker, and the ensuing decade-plus as a third-party publisher hasn't been all wine and roses, either.

"[Sega] seem to have made the wrong decisions for 20 years."

Kalinske spoke with GamesIndustry.biz earlier this month at the DICE Summit, just days after Sega announced staff reductions and the relocation of its San Francisco offices. Though Kalinske said he doesn't keep especially close tabs on the mainstream gaming space these days, he was shocked to hear his old company was pulling out of San Francisco. And while it might have seemed a foregone conclusion that Sega couldn't compete in the gaming industry once giants like Sony and Microsoft got involved, Kalinske dismissed the notion.

"It was not inevitable," Kalinske said. "It could have been avoided if they had made the right decisions going back literally 20 years ago. But they seem to have made the wrong decisions for 20 years."

Regardless of Sega's ability to best the deep-pocketed intruders, Kalinske said it could have joined them had the right decisions been made.

"One of the key reasons why I left Sega is when we had the opportunity to work with Sony, when [Sony Interactive CEO] Olaf Olafsson, [Sony Corporation of America president and CEO] Mickey Schulhof and I had agreed we were going to do one platform, share the development cost of it, share the probable loss for a couple years on it, but each benefit from the software we could bring to that platform. Of course, in those days, we were much better at software than they were, so I saw this as a huge win. We went to Sony and they agreed, 'Great idea.' Whether we called it Sega-Sony or Sony-Sega, who cared? We go to Sega and the board turned it down, which I thought was the stupidest decision ever made in the history of business. And from that moment on, I didn't feel they were capable of making the correct decisions in Japan any longer."

Regardless, there's still hope for Sega as a brand. And Kalinske should know, having helped breathe new life into flagging brands numerous times over his career, from giving The Flintstones a jolt with the introduction of a line of vitamins to bringing Barbie back from the brink in the early '70s. There's never a shortage of experts willing to pile dirt on a brand before it's truly dead, but as Kalinske emphasized in his DICE talk, "The Experts Are Always Wrong." That said, brands aren't immortal, and Kalinske did identify one thing strong enough to kill them.

"You have to really make a lot of mistakes to kill a strong brand."

"Stupidity," Kalinske laughed. "They're hard to kill. You have to really make a lot of mistakes to kill a strong brand. I do think some great brands obviously have been destroyed, Atari being one of them. Why didn't that survive? I think there's a lot of bad decision making involved in killing brands like that. I hope Sega isn't the same thing."

But even a destroyed brand has some value, some potential for future success. The Atari brand still exists, and people are trying to resuscitate it with a mix of familiar franchises, real money gaming, and fitness apps. Kalinske said even he and original Atari founder Nolan Bushnell saw value in it, as they attempted to acquire the name somewhat recently.

"And we failed in that effort, obviously," Kalinske said. "It was maybe five years ago. We weren't able to put it together. At the time it was owned by the French, and the French didn't want to sell."

Moving back to the big brands of today, many analysts and experts have called on Nintendo to get out of the hardware market and bring its valuable stable of intellectual properties to new platforms, specifically mobile devices. While it's another case that might fall under Kalinske's "The Experts are Always Wrong" dictum, he thought they might only be half-wrong in this case.

"I don't think [Nintendo] should give up hardware or consoles," Kalinske said. "I am surprised that they haven't formed a division to extend the IP. I'd love to play some of their games on my iPhone or iPad. It's really a form of marketing for them in a sense. They wouldn't even need to make that much money off it, but it would keep their brands relevant with the users, including people that are older, like me. So it seems to me it's a marketing mistake, but I don't think they should give up what they're doing because they're damn good at it."

"I don't think [Nintendo] should give up what they're doing because they're damn good at it."

In some ways, Leap Frog faces the same dilemma as Nintendo. It has its own hardware and software built using a proprietary language, so anyone wanting to play LeapFrog content has to play it on LeapFrog devices. And while the company makes consoles and tablets, they aren't exactly as ubiquitous as an iPad.

"We're struggling with that," Kalinske acknowledged. "It's a big internal issue and there's a lot of work going on in that area I really can't talk about. But from my perspective, I would love to see a way [to have LeapFrog content on mobile devices]—so long as it was profitable, because you don't want to do these things if they're not at least a little profitable. And that's what they're struggling with, because most of the education content on iOS doesn't make a profit. Almost none on Android makes a profit."

Kalinske's complaints with the educational app market on mobile devices should sound familiar to anyone who's worked on entertainment apps in recent years.

"There's an awful lot of stuff available that's losing money and isn't very good," Kalinske said. "So you have a mess out there right now. This is one of the criticisms I have of Apple. They should take a look at all the educational content on their site right now, it's terribly confusing to parents, and they ought to do a better job of curating that. Put some standards in and make sure that anything saying it's educational actually is, and get rid of a lot of stuff that isn't very good."

That seems unlikely to happen in the near term. Kalinske has been in the interactive edutainment field since 1996, and one constant he's seen is that the seismic overhauls that reshape interactive entertainment every few years don't seem to happen at the same pace.

"It's really hard to make a profit off doing education well. It's pretty easy, relatively, to do entertainment well."

"Education's been much slower," Kalinske said. "The adoption of really good technology has been much slower. It's still slow. It's still happening. It's great to see Massive Open Online Courses (MOOCs), but it's not great to see MOOCs that are boring. My whole thing has been to figure out what the great curriculum is, and then figure out ways to make it fun and interesting, whether that's for a young child or a college age student. Why does it have to be dull and boring lectures?"

There's a reason behind that slower pace of adoption for educational games, and it's one Kalinske said he learned back when he was still at Sega.

"We were doing the Pico, and Pico was a really good system for young kids," Kalinske said. "And we were doing \$100 million in business from the Pico and its software. But it had a lower gross margin on it than obviously, entertainment software. And this is again during that time when Japan was making decisions for me. And they said to me, 'Stop wasting your time on that. It takes too much effort and too much money. You could just do another Sonic title and do a lot more revenue, a lot more profitably. It's easier.' And it struck me. That's why Disney hasn't been that good at education, or any of the other big entertainment companies, like Sony. Because it's hard. It's really hard to make a profit off doing education well. It's pretty easy, relatively, to do entertainment well."

"With the amount of storage that one can do today at a reasonable cost, no matter what the subject is, if we wanted to present that curriculum to children or even teenagers in a way that was most interesting to them, we could do that today," Kalinske added. "And we're not doing it. And that frustrates me."

Newer Rom Collection (2015-01-28 21:39)

I knew there was Dreamcast, PS2, Gamecube, Wii ISOs back in 2005, but they were all torrents with 0 seeds. Ten years later, these roms are on FTP servers. I began downloading NDS roms in 2007, because those were only a couple hundred megabytes and are on my old list. In 2010, I was downloading Saturn and Dreamcast ISOs. Last year I began downloading 2 Gigabyte ROMs for Gamecube, PSP.

Gamecube

Super Mario Sunshine (1.0 Gigabyte)

Super Smash Bros. Melee (1.0 Gigabyte)

Mario Kart Double Dash (1.2 Gigabyte)

Metal Gear Solid Twin Snakes (2.4 Gigabytes 2 files)

Playstation Portable

Crisis Core: Final Fantasy VII (850 MB)

Castlevania Dracula X Chronicles (603 MB)

Daxter (975 MB)

These Roms for the late 2010s when Retro-Bit manufactures Gamecube clone, PS2 clone, Wii clone for \$80 once these patents expire like what happened with NES, Super NES, Genesis and GBA patents.

Nanobots for real-time surgery. (2015-02-06 22:17)

The Mach 7 Navy Gun

Using electromagnetic energy instead of gunpowder or other combustible fuel, this rail gun fires 23-pound shells a distance of 100 miles or more at seven times the speed of sound — Mach 7. The Navy expects to conduct seaside trials in 2016, after more limited testing in defense labs. A rail gun projectile will cost as little as \$25,000 — far less than the current cost of an attack missile, \$500,000 to \$1.5 million. And one warship could hold hundreds of projectiles. Multiple rail gun shells could also be fired in sequence to blow apart incoming missiles.

Doctors Inside Bodies

Early research is promising for development of medical “nanobots” that could be introduced into a soldier’s bloodstream or tissues, capable of releasing treatments for everything from a sore throat to malaria or maybe even the effects of chemical or biological weapons. The nanobots, part of an area of research called In Vivo Nanoplatfoms, would work at the molecular level, hitching rides on a natural protein in the body. One day they might save the lives of soldiers where combat medicine or medevac services are lacking, and they could eventually find their way into civilian applications, too.

A “Flying Humvee”

This rugged transporter would take off like a helicopter and fly like a cargo plane. When they land, some versions under study by Lockheed Martin, United Technologies and Textron would even be able to drive off like, well, a Humvee. The concept vehicle, dubbed the ARES, would be similar to a small version of a V-22 Osprey transport, which already provides the Army and Marines with a huge operational advantage in difficult terrains. One of its most promising capabilities: quickly moving soldiers and gear over minefields and past roadside booby traps without having to call in a bomb squad first. The military wants the air-to-land vehicle to be extremely rugged, utilitarian in design, easy to operate and simple to fix.

Silent-Running Motorcycles

Imagine off-road dirt bike engines that make no sound. They would be powered by tough, powerful battery packs, allowing warriors to sneak up quickly on an unsuspecting enemy. Such designs are in the works at Logos Technologies and electric bike maker BRD. The electric two-wheelers would have just a small reserve of gasoline in case of an

electric failure, plus a secondary fuel source, if needed, to escape danger.

Ship Lasers

Easier to turn, aim and fire than today's heavy shipboard anti-aircraft weaponry, laser guns will give sailors a more precise bead on the enemy. So precise, in fact, that naval vessels will be able to zap and disable an approaching enemy boat's engine, allowing sailors to capture and interrogate their combatants rather than killing or wounding them. This technology will be especially useful in close-to-shore patrols, where ships are more vulnerable to attacks from small boats. Several companies are involved in building the so-called Laser Weapons System, including Raytheon and San Diego-based defense contractor Kratos. It will be tested soon aboard the USS Ponce, one of the workhorses of the U.S. Atlantic Fleet.

17.3 March

Home video to HEVC (2015-03-07 13:34)

I finally backed up 5 VHS tapes, one VHS 4 hours long onto 5 DVDRs. That is 12 hours of 20th century footage. The next step was to convert these to 720x480 x265 format. I am in the middle of converting MPEG2 to x265. The mp4 is on 64 GB SDcard. Its got Disney World and 1990s footage. I have 6 hours in x265 1.4.512 and it is blurry compared to MPEG4 AVC. It takes an hour to encode 30 minutes so I keep the HEVC versions.

Game store reunion (2015-03-11 14:52)

Of course the local videogame thrift shop is complaining about business due to roms and emulators sold for free. The clerk talking how he cannot mod Playstation 2, because its the users all run games off the hard drive or burn PS2 games. Piracy of roms is huge in Hudson.

Whats a pisser is nobody uses the retro message boards, Instagram, Twitter or Pinterest. They don't play (never owned) Commodore Amiga. They're on Facebook only and the gaem store has no domain server, just Facebook. He only visits real life people in the store, yet hates all social media and email. The other one has 300 Facebook friends he knows personally even though Facebook is obviously really stupid. That one uses Facebook in place of LinkedIn. I read the Facebook comments, one reviewer said that they don't clean the cartridges. The SNES and Genesis games sell more than current generation. The clerk I knew from 8 years ago now works at a cookie factory in River Falls.

Super Mario 3D World on Smartphone (2015-03-22 07:39)

I have played and completed Super Mario 3D World and Mario Kart 8. Super Mario Bros. on Smart phone will help Wii U and 3DS, since it makes Nintendo richer. It would help fund Mario Kart 9, Super Mario 3D World 2, and Super Smash Bros. 5 on Wii U. The New 3DS was released this year so Nintendo hardware stays relevant. Sony publish a Xperia running Android, but it failed. Playstation Portable and Playstation Vita were lagging far behind DS and 3DS sales. A "Phoneboy" with 4G LTE would work as long as it runs Android. A Phoneboy running quad core CPUs and 4 GB of RAM.

Hardest Super Mario GALaxy levels (2015-03-28 16:13)**The Perfect Run - Grandmaster Galaxy - Super Mario Galaxy 2**

This level requires skill. There are many reasons. 1. Daredevil - you have one life to do the whole thing which is not easy 2. Hammer bros - you have to get rid of the blue ones but avoid hammers and discs and them themselves 3. Lazer - a lot of lazer is used in the level on the flipswitch bit and one on the green thingy. I could say much more

This level so hard 1 needed 241 (1 is the normal version of grand master galaxy) 2 many planet have yoshi to out the planet with many thing that hurt Mario 3 it is daredevil

Champions road is not even hard. Nor is this level

2

Battlestation's Purple Coins - Dreadnought Galaxy - Super Mario Galaxy

I was amazed when I found out how hard it was. I would never see that again.

One of the hardest stars of the game. I say it's the third hardest star.

3

Luigi's Purple Coin Chaos - Mario Squared Galaxy - Super Mario Galaxy 2

This is the same as the first except for one thing. Cosmic guys.

Major Burrows daredevil run is harder.

4

Bouldergeist's Daredevil Run - Ghostly Galaxy - Super Mario Galaxy

I don't know why you guys are rubbish at video games but i, m speaking from my advise that this is the 4th easiest boss in the game on my first time I beat him I actually felt sorry for him that I kicked his ass so hard

This is one of the hardest video game levels EVER. I spent 11 lives to finish it!

It is hard to do this with one life, extra hard.

5

Luigi's Purple Coins - Toy Time Galaxy - Super Mario Galaxy

This is HARD but has plenty of coins with a low time to do it in.

6

Lava Spire Daredevil Run - Melty Molten Galaxy - Super Mario Galaxy

The ways I died on this level... Hmm... Well, there was that one time I fell in lava... and that time I got hit by lava... and the time I literally jumped into the lava because of head-bursting frustration at the ultimate and too-challenging-to-be-a-Mario-level-because-lava-is-completely-EVERYWHERE challenge... actually, challenge is just an understatement.

Good God, going through the most intense galaxy in the game with ONE LIFE

I don't know about you but this is hard with one life.

7

Throwback Throwdown Speed Run - Boss Blitz Galaxy - Super Mario Galaxy 2

This is so hard. I cannot do those bosses THAT quick!

8

Bouncing Down Cake Lane - Toy Time Galaxy - Super Mario Galaxy

There are so many platforms and includes a hard boss

9

Dino Piranha Speed Run - Good Egg Galaxy - Super Mario Galaxy

That's okay, practice makes perfect.

I can't DO it that quick.

10

Purple Coins On the Puzzle Cube - Gusty Garden Galaxy - Super Mario Galaxy

I can't do it really quick and I keep on running into the walls

11

The Electric Labyrinth - Super Mario Galaxy

I was totally annoyed of this level because of how many tries and GAME-OVERs it took me to get the PERFECT timing...

Tricky and very annoying.

12

Dreadnought's Garbage Dump - Super Mario Galaxy

I hate this level!

13

Purple Coins in the Bone Pen - Super Mario Galaxy

Hardest Super Mario levels I've played (2015-03-28 17:40)

The Perfect Run - Super Mario Galaxy 2

Grandmaster Galaxy only opens up when you have collected all 120 Power Stars, and all 120 Green Stars! There ARE checkpoints, but contains four VERY HARD sections! If you're not 100 % sure that you have SUPREME CONFIDENCE in your abilities, I would recommend coming into this level with at least 30 lives, just to be safe...

World 8-3 - Super Mario Bros.

This level is made out of nothing but massive pits, Bullet Bills, Koopas, and Hammer Bros.. All of that is already insanely hard, but imagine trying to pull all of this off with only a whopping 300 seconds on the timer, AND the fact that this is the longest level in the game! Timing your jumps is the key here to beating this level!

Tubular - Super Mario World

I've been stuck on this level for ages once, can't express how much I hated this level back then.

Luigi's Purple Coins - Super Mario Galaxy

After completing the game for the first time, a series of Purple Prankster Comets appear in almost every galaxy, giving the player the option to go through remixes of certain levels in the galaxy, forcing them to collect 100 Purple Coins. Sometimes under a time limit. This is the hardest of them all, because all 150 of the Purple Coins are on a giant eight-bit Luigi planet. The tricky part is once Mario lands on one of Luigi's sprites, it shrinks more and more until it disappears, forcing the player to collect two-thirds of the Purple Coins while only touching each sprite ONCE! >:^ }

Secret Shine Challenge 14 - Super Mario Sunshine

The trip to this stage is hard enough. The actual stage is much worse. Mario has to hop on a pad while that pad is on a river, while trying to collect eight red coins. The catch is the river is poisonous and is an instant death.

Kamek's Revenge - Super Mario World 2: Yoshi's Island

The first part of the level, the player will have to avoid Kamek and his spells. The hard part is Kamek throws his staff

wildly Baby Mario and Yoshi will have to reach a key, which will unlock the second part of the level. Once there, the duo will equip with skis, still trying to avoid Kamek.

Wing Mario Over The Rainbow - Super Mario 64

Why is it every hard level in Super Mario 64 seem to play the Athletic Theme, huh? Anyway, in this level, Mario must collect eight red coins in the clouds all throughout the level. The catch is the coins can only be grabbed by flying around the level using Mario's Wing Cap. Now, don't get me wrong, flying around with the Wing Cap is amazing, but in this level, flying leads to rage. If Mario isn't fast enough before the Wing Cap and plummets into the sky below, he will land back outside Princess Peach's Castle near the moat, meaning the player will have to travel all the way back up to the top of the castle just to attempt to complete this ridiculous. Level again.

Lava Spire Daredevil Run - Super Mario Galaxy

This...was the hardest Power Star under the White Comet to get in this game without a doubt. Why? Well, because instead of being dropped off near the Sinking Lava Spire Planet or somewhere else close to the Power Star, you have to try to complete the ENTIRE LEVEL without taking damage or screwing up.

Champion Road - Super Mario 3D World

World Crown in Super Mario 3D World only opens if you've collected every single green star, stamp, and got to the top of the flagpole in every single level in the game. This is very similar to The Perfect Run except that there are no checkpoints! This level also contains six super difficult sections and yet, it's probably the longest level in the entire game! If you die, you HAVE to go back ALL THE WAY BACK to the beginning. Don't even expect to get it on your first try. If you did, then you're probably a wizard. Oh, and if you don't have a tanooki suit, you're pretty much dead.

Special 8-5 - Super Mario 3D Land

This is basically a rush level. Where it begins, you will only have 30 seconds to complete the level. There will also be a Cosmic Clone chasing you throughout the level. Trying to rush through the level is hard enough, but having someone dangerous chase you while doing it really takes the cake. Don't expect to get this on your first try.

Hanna Barbara DVDs (2015-03-30 23:11)

I got complete series of Star Trek The Next Generation (another post) Star Trek Deep Space 9 (another post), Star Trek Voyager (another post), Battlestar Galatica (another post), X-Files (another post), Wire (another post) The Sopranos (another post), Game of Thrones (seasons 1-4). My head wasn't completely up my ass, because some of the anime is \$300. And I also focused on Disney DVDs back in 2012.

So far, I bought complete season of Johnny Quest from Hanna Barbara, yet I need more series. The complete season of Flintstones is \$80. Scooby Doo Where are You is \$50. I glazed at Space Ghost Coast to Coast DVDs. I relived several episodes in MPEG4. I watched that in the 1990s. Since these DVDs were published in 2012, I was hoping the *used* price would decrease in 2015. Hanna Barbara is way expensive. I heard rumors these were the same price in 2012.

Hillary Rodham Clinton

United States Secretary of State

Hillary Rodham Clinton (born October 26, 1947) is currently serving as the 67th Secretary of State in the Obama Administration. She was a Senator for New York from 2001 to 2009, and ran for the Democratic Primaries in 2008. She was the First Lady of the United States from 1993 to 2001 as wife of President Bill Clinton whom she married in 1975.

Early Life

Hillary Clinton was born *Hillary Diane Rodham* to Hugh Ellsworth Rodham and Dorothy Emma Howell in Chicago, Illinois on Oct. 26, 1947. She has two younger brothers, Hugh Rodham and Tony Rodham. Her parents, who were United Methodist's who moved the family to Park Ridge, Illinois when Hillary was three-years-old. Her father operated a small business in the textile industry^[1] while her mother was a homemaker.^[2]

Early Political Activism

Growing up in a politically conservative household, Hillary began working for the Republican party from the age of thirteen. However during her college years, prompted by events such as the Civil Rights Movement and the Vietnam War, she changed her political views by the late 1960's. She left the Republican Party for good in 1968.

Law School & Career

Hillary majored in political science at Wellesley Collge in 1965 before entering Yale Law School where her research focused on children and the law.

Marriage to Bill Clinton

In late Spring, 1971, Hillary began dating Bill Clinton who was also studying law at Yale. In 1974, following repeated requests from Bill Clinton to marry him, Hillary accepted. They were married on Oct. 11, 1975 in the Rodham's living room. On February 27, 1980, Rodham gave birth to a daughter, Chelsea, her only child.

Moving left

Hillary Clinton grew up as a Goldwater Republican, like her father, in the middle-class Chicago suburb of Park Ridge. By the time she was a freshman at Wellesley, when she was elected president of the College Republicans, her concern with civil rights and the war in Vietnam put her closer to the moderate-liberal wing of the GOP led by Nelson Rockefeller. By her junior year, she had to be talked by her professor into taking an internship with Rep. Gerald R. Ford and the House Republican Caucus. In her senior year, she was campaigning for the anti-war Democrat Eugene McCarthy.

"I sometimes think that I didn't leave the Republican Party," she has written, "as much as it left me."^[3]

Alinsky Thesis

The senior thesis of Hillary D. Rodham, Wellesley College class of 1969, was on the work of Chicago radical Saul Alinsky.

The Clintons who asked Wellesley in 1993 to hide Hillary Rodham's senior thesis from the first generation of Clinton biographers, according to her thesis adviser and friend, professor Alan H. Schechter, who describes taking the call

from the White House. "A stupid political decision."

Wellesley's president, Nannerl Overholser Keohane, approved a broad rule with a specific application: The senior thesis of every Wellesley alumna is available in the college archives for anyone to read – except for those written by either a "president or first lady of the United States."

So far, that action has sealed precisely one document: Hillary Rodham's senior honors thesis in political science, entitled " 'There Is Only the Fight...': An Analysis of the Alinsky Model."

Rodham took her thesis title — "There Is Only the Fight..." — from T.S. Eliot:

"There is only the fight to recover what has been lost and found and lost again and again."

She began with a feminist jab at the clichés of male authors: "Although I have no 'loving wife' to thank for keeping the children away while I wrote, I do have many friends and teachers who have contributed to the process of thesis-writing." She thanks particularly "Mr. Alinsky for providing a topic, sharing his time and offering me a job."^[4]

Radical law firm

Hillary Rodham served a:) clerkship in 1971 at one of America's most radical law firms, San Francisco based Treuhaft, Walker and Burnstein.

One partner at the firm, Doris Brin Walker, was a lifelong Communist Party USA member at the time. Another partner, Robert Treuhaft, had left the party in 1958, several years after being called before the House Un-American Activities Committee and labeled as one of America's most "dangerously subversive" lawyers. The Oakland-based firm was renowned for taking clients others rejected as too controversial, including Communists, draft resisters, and members of the African-American militant group known as the Black Panther Party. The other partner Malcolm Burnstein, maintained a lifetime commitment to radical causes.

The firm was involved in a volatile Black Panthers case the summer Mrs. Clinton worked there: the trial of Huey Newton for the 1967 killing of an Oakland police officer. Treuhaft represented a Newton associate whose role in the trial may have helped Newton win a series of mistrials and, eventually, the dismissal of all charges related to the officer's death.

Partners at the firm said it was likely Mrs. Clinton also worked on politically sensitive cases involving a Berkeley student activist denied admission to the California bar over incendiary rhetoric, Stanford physician interns fighting a loyalty oath at the Veterans Administration, and men claiming conscientious objector status to avoid being drafted and sent to Vietnam. Mrs. Clinton's only public recollection of her work at the Treuhaft firm is that she handled a child custody matter.

Mrs. Clinton's most vivid memories from that summer may be personal ones that have nothing to do with the law firm with which she clerked. A fellow Yale law student, President Clinton, shared the Berkeley apartment where she was staying. The pair soon got serious and would move in together when they returned to New Haven that fall.

Mrs. Clinton's decision to work at the Treuhaft firm was rooted in the turbulence, chaos and radicalism that buffeted Yale after she entered law school there in 1969. Most campuses saw their share of foment, but Yale saw more than its share in the spring of 1970 because of the impending criminal trial in New Haven of a Black Panthers' leader, Bobby Seale, and several co-defendants, for kidnapping and murdering another member of the Panthers. Many, including Yale's president at the time, doubted that Seale and other black militants could get a fair trial. As students prepared for a national student strike on May Day 1970, a suspicious fire broke out in the basement of a Yale law library.

Mrs. Clinton has written about joining a "bucket brigade to put out" the library fire and about organizing round-the-clock patrols in the wake of the blaze.

Ultimately, the May Day protest turned Yale into an armed camp, occupied by thousands of soldiers, but the event yielded little of the feared violence. That came three days later at Kent State University in Ohio when National Guard soldiers shot and killed four students protesting the Vietnam War.

The Black Panthers' trial didn't actually begin until the fall. During the lead-up, Seale's attorney, Charles Garry of San Francisco, became a regular presence in the courtyards at Yale Law School.

At some point, Treuhaft and his wife, Jessica Mitford, passed through New Haven and threw a party to raise money for the Panthers' defense. According to Gail Sheehy's biography of Mrs. Clinton, "Hillary's Choice," the future senator attended the Treuhaft-Mitford party. Many have surmised that this event laid the groundwork for Mrs. Clinton's clerkship at Treuhaft's law office.

One of Treuhaft's partners, Malcolm Burnstein, said Mrs. Clinton's internship was arranged by a national student group. "She was sent to us by the Law Students' Civil Rights Research Council," Mr. Burnstein told the Sun. The group also paid Mrs. Clinton during her summer at the firm, he said. It is possible Mrs. Clinton selected the Treuhaft firm and then arranged funding through the council. That's how she set up her first law-school summer internship working with the future founder of the Children's Defense Fund, Marian Wright Edelman.

Mrs. Clinton's only public recollection of her stint at the Treuhaft firm came in her 2003 memoir, "Living History."

"I told Bill about my summer plans to clerk at Treuhaft, Walker and Burnstein, a small law firm in Oakland, California and he announced that he would like to go with me," she wrote. "I spent most of my time working for Mal Burnstein researching, writing legal motions and briefs for a child custody case."

A review of some of Mr. Burnstein's legal files now at the archives of the University of California at Berkeley shows that the Treuhaft firm also handled two major cases in mid-1971 involving political dissent. One involved a protest leader who was elected Berkeley student body president, Daniel Siegel.

Mr. Siegel passed his the bar exam in 1970, but his admission was blocked on grounds that he was morally unfit. He was criminally charged with inciting the 1969 "People's Park" riot, which left one man dead, others injured, and hundreds arrested.

Mr. Siegel was acquitted of that charge, but bar officials said his statements prior to the riot and thereafter indicated he was not suited to be an attorney. They also asked him if he was a Communist, which he denied.

Mr. Burnstein appealed the bar committee's rejection to the California Supreme Court, arguing that Mr. Siegel was being punished for his political beliefs. The court eventually sided with Mr. Siegel, who joined the bar in November 1973.

Two other dissenters whose case was pending during Mrs. Clinton's summer at the Treuhaft firm were Peter

Cummings and Peter Rudd. Both were medical students from Case Western Reserve University in Ohio who won internships at Stanford University in Palo Alto, Calif. On arriving at Stanford, they discovered they were required to fill out loyalty oaths to do a required rotation at the nearby Veterans Administration hospital. "It was the typical, 'Are you now or have you ever been a member of the Communist Party?'" Dr. Cummings recalled in a recent interview. He said he and Dr. Rudd were not Communists, but chafed at signing the oath. "I've always been very annoyed by and not a fan of this kind of loyalty oath," Dr. Cummings said.

Through the American Civil Liberties Union, the pair became clients of Mr. Burnstein. In the ensuing legal challenges, which went before riders of the 9th Circuit Court of Appeals at least twice, the government argued that disloyal medical students might try to kill unsuspecting veterans who sought medical treatment. Mr. Burnstein prevailed and the loyalty oath for Veterans Administration doctors soon wound up as a footnote of history.

As Mrs. Clinton left the Treuhaft firm in 1971, one of its partners was gearing up for the defense of a Communist and black revolutionary, Angela Davis, against murder, kidnapping and conspiracy charges stemming from a 1970 shootout that left a California judge dead. Ms. Walker became the resident Communist on Ms. Davis's legal team. "I was asked by the Party to participate in Angela's case," the lawyer said. She said no one else at the law firm, including Mrs. Clinton, worked on Ms. Davis's case.

At the trial, held in 1972 at San Jose, the Treuhaft firm's winning record held up again. A jury acquitted the polarizing African-American activist of all charges.

By the time Mrs. Clinton arrived at the Treuhaft firm in 1971, its reputation as a defender of left-wingers and radicals was well established. Indeed, those at the firm assumed that reputation drew the Yale law student in.

"She did want to work for a left-wing movement law firm. Anyone who went to college or law school would have known our law firm was a Communist law firm," Treuhaft told Ms. Sheehy in 1999.

"This was an old-left, radical law firm," a staff attorney there during Mrs. Clinton's summer, David Nawi, said. "Treuhaft was suing the police and doing wonderful work with the black community in East Oakland before anybody else."

A Yale Law student who worked as a clerk at the firm the summer before Mrs. Clinton arrived, Mary Nichols, said Treuhaft was open about his stint in the Communist Party. "Treuhaft, he himself was proud of having been a Communist at one time. This was not something that they hid in any way. They were not people stockpiling dynamite. They were a respectable law firm, but still you knew they had experimented in that kind of way," she said.

Mr. Siegel, the Berkeley protester-turned-lawyer, said committed student leftists in 1971 would have viewed the firm's Communist connections as quaint, perhaps even conservative. "We almost universally thought Communist Party people were sellouts," he said. "People of my generation who were getting involved were Marxists, Maoists, even Trotskyists. The Communist Party was pretty unpopular, unless your parents were in it."

The details of Treuhaft's membership in the Communist Party were not formally disclosed until 1977, when his wife, Jessica Mitford, published a humorous memoir of their years in the Communist ranks. In "A Fine Old Conflict," she reported that her husband signed up in 1943 and that she followed in 1944. Both left the party in 1958, she wrote. Ms. Walker joined the party in 1942. "I'm still a Marxist, and that's why I stayed in," she said.

While many American Communists quit the party in disgust in 1956 following the Soviet invasion of Hungary and Nikita Khrushchev's denunciation of Josef Stalin's crimes, those events do not seem to have been the impetus for the departure of Treuhaft and Mitford, who stayed on for another two years.

A journalist who edited a recently published collection of Mitford's letters, Peter Sussman, said the couple's falling out with the American Communist Party was driven largely by its unyielding bureaucracy.

"She was bored with it," Mr. Sussman said. "It was ineffective. She had worked to reform it and that was unsuccessful, and to give the American party some autonomy from Soviet Communism."

Mr. Sussman said Mitford, who died in 1996, was also "bitterly disappointed" about a decision the party made to cut ties with a group dedicated to resolving racial inequities in America, the Civil Rights Congress.

A collection of Mitford's letters indicates that Republican political operatives knew about Mrs. Clinton's work at Treuhaft's firm months before the 1992 election, but apparently chose not to raise it despite her prominence in her husband's presidential campaign. In a July 4, 1992 letter to a veteran civil rights activist, Virginia Durr, Mitford wrote, "There was a v. long article in Vanity Fair by Gail Sheehy, an interview with Hillary in which every detail of her life from childhood on was explored — no mention of the internship in Bob's law office. Quite right, I thought, as

obviously if that came out it would be prime meat for the Bush campaign."

Mr. Burnstein said he, Treuhaft, and Ms. Walker agreed upon learning of Mr. Clinton's presidential bid not to talk publicly about Mrs. Clinton's clerkship because they anticipated it would become fodder for Mr. Clinton's opponents. "We expected it," Mr. Burnstein said. "We were very carefully not talking to the press back then. ... We did not want her being unfairly tarred with someone else's politics. Hillary's politics were not Bob's politics, which were not Doris's politics, which were not mine."

"For Hillary to pick the most left-wing firm really at that time in the Bay Area, it's still a surprise to me that more hasn't been made of that," Ms. Walker said. "It was such an obvious thing for them to pick up, but they didn't, and I've never understood it."^[5]

Bernard Rapoport connection

As Texas swung from a Democratic stronghold to an increasingly Republican and conservative state, marxist leaning businessman Bernard Rapoport continued to support liberal Democrats and their causes, both with his money and his extensive national political connections. His contributions to George McGovern's 1972 presidential campaign put Mr. Rapoport on one of President Richard M. Nixon's enemies lists; contributions to the presidential campaigns of both Bill Clinton and Hillary Rodham Clinton helped nourish a 40-year friendship. Mr. Clinton was scheduled to deliver a eulogy at a memorial service in May 2012, in Washington DC.^[6]

Single-payer Bill

In 1994 Jim McDermott, John Conyers and Paul Wellstone promoted a "single-payer" health care bill (HR1200/S491).^[7] Ellen Shaffer, a member of Wellstone's staff told the People's Weekly World that the authors had been "working closely" with Hillary Clinton. "She knows what they are doing" Shaffer said.^[8]

2000 WFP Convention

The New York Working Families Party 2000 Convention was held at the Desmond Hotel, March 26.

Attendees included;

- Jim Duncan, WFP co-chair and statewide political director of the United Auto Workers
- Bertha Lewis, WFP co-chair and chair of New York ACORN
- Bob Masters, WFP co-chair and statewide political director of the Communication Workers of America
- State Senator Eric Schneiderman
- Chris Silvera, Treasurer of Teamsters local 808
- Dennis Hughes, president New York Federation of Labor
- Jose Velazquez, Lithographers local 1 organizer
- Ed Vargas, director of the state council of UNITE
- Karen Scharff, executive director of Citizen Action New York
- Jim Hightower
- Maude Hurd, national chair of ACORN
- Bradley Erck, a rep. on the Niagara County legislature and UAW Local 686, legislative committee chair

- Larry Handley, President Amalgamated Transit Union
- Arthur Cheliotas, president of Communication Workers of America local 1180
- Hillary Clinton

There were sizable delegations from ACORN and Citizen Action.^[9]

Clinton and communists helped Kucinich

During Dennis Kucinich's 1996 Congressional run, there was considerable controversy over his ties to Communist Party USA member Rick Nagin. Writing in the Communist Party USA paper People's Weekly World Ohio Communist Party chairman, Rick Nagin, detailed the campaign which led to Kucinich's election to Congress:^[10]

"The election of Dennis Kucinich in Ohio's 10th Congressional District was a ground-breaking event demonstrating the powerful political potential of a mass, grassroots coalition led by Labor.

Trade unionists and seniors provided the largest numbers of some 5,000 volunteers but many others came from Hispanic, environmental, peace and other organizations.

According to the campaign staff, the volunteers canvassed at least 600 of the district's 750 precincts, some as many as four times. They turned the western half of Cuyahoga County and especially the west side of Cleveland into a sea of 15,000 bright yellow yard signs reading "Light Up Congress! Elect Dennis Kucinich" -[10]

Many organizations also issued their own literature and did their own mailings including the AFL-CIO's Labor '96, the UAW CAP Council, the Sierra Club, Peace Voter '96, gay rights and senior groups. The United Auto Workers and the Steelworkers did plantgate distributions. The Ohio Council of Senior Citizens distributed 12,000 pieces with the positions of Kucinich and his opponent, incumbent Martin Hoke, on senior issues to senior buildings, nutrition sites and bingo games.

Then First Lady **Clinton**, Congressmen Louis Stokes, Joseph Kennedy and Barney Frank also helped out.

"The coalition embraced many political viewpoints: Democrats, independents, Greens, socialists, Communists, members of the Labor Party, even some disgruntled Republicans. Democratic Party figures, including First Lady Hillary Clinton, Congressmen Louis Stokes, Joseph Kennedy and Barney Frank visited Cleveland to help in the effort."^[11]

Take Back America Conferences

Hillary Clinton was on the list of 114 speakers (which included George Soros) at the 2004 Take Back America conference, which was organized by the Institute for Policy Studies, and Democratic Socialists of America dominated Campaign for America's Future.^[12]

She was back in 2006, 2007.

Admiration for Cesar Chavez

On April 1, 2008 Evelina Alarcon, Executive Director of Cesar E. Chavez National Holiday welcomed the backing for a Cesar Chavez national holiday from Presidential candidate Senator Barack Obama who issued a statement on Cesar Chavez's birthday Monday, March 31, 2008. *"We at Cesar E. Chavez National Holiday appreciate the backing of a national holiday for Cesar Chavez from presidential candidate Senator Barack Obama. That support is crucial because it takes the signature of a President to establish the holiday along with the Congress's approval,"* stated Evelina Alarcon. *"It is also encouraging that Senator Hillary Clinton who is a great admirer of Cesar Chavez acknowledged him on his birthday. We hope that she too will soon state her support for a Cesar Chavez national holiday."*

Alarcon's remarks were part of a statement made at a press conference at our nation's Capitol on April 1st

called by Chair of the Hispanic Congressional Caucus Rep. Joe Baca (D-CA) in support of HR 76, a resolution he authored with 62 Co-Sponsors that encourages the establishment of a Cesar Chavez national holiday by the Congress^[13]

Support from Individuals

Hilda Solis & Dolores Huerta

In 2007 Hilda Solis, current Secretary of Labor, endorsed Sen. Clinton for president and signed on to co-chair of the Clinton campaign's Environmental and Energy Task Force and co-chair of the National Hispanic Leadership Council. Solis was joined by her friend and Democratic Socialists of America honorary chair, Dolores Huerta. Solis and Huerta had the honor of formally nominating Clinton for the Democratic primary.

Together Huerta and Solis campaigned for Clinton through California and Nevada on a tour themed "Juntos Con Hillary, Una Vida Mejor" (Together with Hillary, A Better Life).

Megan Hull

Between Feb. 2, 2008 and August 28, 2008, Megan Hull contributed \$6,900 to Hillary Clinton's 2008 Presidential Nomination race.^[14]

Sheinbaum

Stanley Sheinbaum has many influential friends on the U.S. left.

His walls are adorned with framed photos with Fidel Castro, King Hussein, Barbra Streisand and other world leaders and A-list celebrities.^[15]

Key political players such as Bill Clinton, **Hillary Clinton**, Jesse Jackson, Queen Noor of Jordan and former Sen. Gary Hart, *have made the pilgrimage to his Westside salons in search of intellectual stimulation and money for their pet causes – sometimes their own political campaigns.*

"Sheinbaum keeps the New Deal torch alive in an age when it's not fashionable to do so," said former senator and presidential candidate Gary Hart, a longtime friend. *"He's a voice of conscience."*

George Soros

By 2008, Barack Obama was one of only a handful of candidates to get a personal contribution from George Soros. The others include Senate Minority Leader Tom Daschle (D-S.D.), Sens. Barbara Boxer (D-Calif.), Hillary Rodham Clinton (D-N.Y.), Bob Graham (D-Fla.), John Kerry (D-Mass.), Patrick Leahy (D-Vt.), U.S. Rep. Tom Lantos, and former Vermont governor Howard Dean.^[16]

Support from Organizations

Council for a Livable World

The Council for a Livable World, founded in 1962 by long-time socialist activist and alleged Soviet agent, Leo Szilard, is a non-profit advocacy organization that seeks to "reduce the danger of nuclear weapons and increase national security", primarily through supporting progressive, congressional candidates who support their policies. The Council supported Hillary Rodham Clinton in his successful Senate run as candidate for New York.^[17]

Planned Parenthood

Clinton received \$1837 in lobbying funds from Planned Parenthood in 2008.^[18]

EMILY's List

Clinton has been supported by EMILY's List during her campaigning.

International Association of Machinists and Aerospace Workers

The 700,000-member International Association of Machinists and Aerospace Workers, one of the nation's largest and most politically active trade unions, endorsed New York Democratic Senator Hillary Clinton for President. They also took the unusual step of endorsing a Republican candidate for the primaries, former Arkansas Governor Mike Huckabee.

Obama appointment

In January 2009, Clinton was nominated by the Obama administration for the position of Secretary in the Department of State and confirmed in January 2009.^[19]

Midwest Gaming Classic 2015 (2015-04-12 14:08)

Its my first time here since its a long drive from St. Croix County. Pretty good conference. Met some instagram and facebook people to add.

Midwest Gaming Classic

375 S Moorland Rd, Brookfield, Wisconsin 53005

The Hardest Sonic the Hedgehog levels I've played (2015-04-14 16:34)

1. Cannon's Core - Sonic Adventure 2

I got SA2B when I was very small, I swore I could beat it before I became ten. I think I did it... But only a month before. That is all due to this 'mega level'. Still though, it was a good way to wrap up a good story and the ending was just awesome... Also did I mention the music? No? Oh, I'll sum it up quickly then... IT'S OVER 9000!

2 Eggmanland - Sonic Unleashed

Only number 10... I've beaten all of the sonic games in a week but eggmanland took me a year. This should be number 1

Ha! Rank A! But too hard. Try to jump down onto the platform instead of swinging on the pipes across the lava.

3 Scrap Brain Zone - Sonic the Hedgehog

It's true! Everything wants to kill you in this game! Even the first level is hard! First, you get your hopes up and then you DIE! I also finished the game without the Chaos Emeralds, and what did I get? A kick in my ass.

4 The End of the World - Sonic the Hedgehog 2006

Why is this not number one it only took me a couple days to beat Cannons core but I never got to beat this stage also bad controls, hard to beat enemies, and lots and lots of glitches.

5 Casino Park - Sonic Heroes

Casino Night Zone from the Mega Drive version of Sonic 2 is much better than Casino Park. Still, I like this hard stage. This level is like TORTURE! It takes you forever to reach the goal ring.

6 Death Egg/Doomsday Zone - Sonic and Knuckles

7 Metallic Madness - Sonic CD

I had to look up how to beat this level's second act because it was so big and confusing.

8 Labyrinth Zone - Sonic the Hedgehog

I was stuck on this level longer than any other in any game as far as I can remember.

How can this level not be at least in the top five? Its so hard and frustrating!

9 Metropolis Zone - Sonic 2

I DIED 68 TIMES ON THIS LEVEL! Wing Fortress was harder, though.

10 Lost Impact - Shadow the Hedgehog

Thought The Doom was hard? This level is 10 TIMES WORSE! The level is way more confusing and ridiculously big, and you have to kill ALL of the enemies to beat the Hero mission. I HATE THIS LEVEL.

11 Launch Base Zone - Sonic 3

12 The Cauldron - Sonic and the Black Knight

I died a lot on this level because of the lava rings when trying to jump

The stupid lava rings...

13 Dragons Lair - Sonic and the Black Knight

Like shrouded forest but more challenging missions

14 Final Chase - Sonic Adventure 2

I had trouble getting to the final boss of the dark story

15 Shrouded Forest - Sonic and the Black Knight

First mission in this level is not that hard but there are other ones I haven't done yet

16 Marble Zone - Sonic 3

17 Night Palace - Sonic and the Secret Rings

I find this level tricky but not that tricky since I did beat on my first try

18 Eternal Engine - Sonic Adventure 2

It is known for how long and boring it is

19 Carnival Night Act 2 - Sonic 3

I can't even do it!

20 Terminal Velocity - Sonic Colors

Looks pretty easy right until the enemies arrive

21 Lost World - Sonic Adventure

22 Crazy Gadget - Sonic Adventure 2

23 Scrambled Egg Zone - Sonic the Hedgehog 2

24 Final Fortress

For Team Sonic and Team Dark, the camera view is so bad that it is hard to see where you are going. When you start playing the stage, you launch through the ring and there is a rail somewhere. When you miss the rail, you're toast and it seriously takes you a ton of tries to reach the rail. There are also lasers on the rail you have to avoid as you go deeper into the stage.

25 The Doom - Shadow the Hedgehog

This level is too maze like and WAY too big and boring elevators that you have to wait for. the hero mission is when you have to chuck healing capsules on dead reasearchers but the camera has a seizure and you will probably miss a lot. The dark mission sucks more since you have to kill SIXTY gun troops! In the giant maze like area! Oh and one of the gun mechs is glitches and you have to use a checkpoint warp to actually FIND THAT GUN MECH. even the normal mission is Tedious.

This level is a never ending maze. You are never sure where to go. I was stuck on that for a few days

A year ago I played this stage and it took me 23 MINUTES to complete it (I did dark mission)

26 Route 280 Mission 4 - Sonic Adventure 2

Beating act 1 of this kart racing level is fine, but when you go to act 4 and you have to clear without hitting any walls, be prepared

27 Lava Mountain Zone 2 - Sonic Lost World

28 Blue Marine Zone - Sonic Blast

This is the most confusing zone in the Sonic series.

29 Dusty Desert - Sonic the Hedgehog 2006

30 Camelot Castle - Sonic and the Black Knight

31 Security Hall - Sonic Adventure 2

32 Grand Metropolis / Power Plant - Sonic Heroes

33 Flame Core - Sonic the Hedgehog (2006)

This level is so annoying, falling off walls and landing in lava, and a hard boss to go with it!

34 Bullet Station - Sonic Heroes

I got 3 Game Overs playing the first time with team sonic!

35 Windy Hill - Sonic Lost World

36 Wacky Workbench (Sonic CD)

Pandoraviruses from Mars! (2015-04-21 09:52)

If you were to guess right now what kinds of organisms have driven some scientists to believe that another branch of life exists, what would they be? Hideous, green aliens or maybe man-eating flies? Actually, the organisms in question are neither alive nor visible to the naked human eye. Recently identified giant viruses – literally just uncommonly large viruses – are the organisms responsible for this new line of thinking.

Giant viruses appear to have been hiding from us in plain sight (figuratively speaking of course). In 2003, a group of French researchers identified the first mega viruses in a cooling tower, where they had been living off of amoebas. Since then, other giant viruses have been found in swamps, contact lens fluid (!), a pond in Australia, and off the coast of Chile. The recent identification of giant viruses doesn't mean that they have suddenly appeared on Earth in the last ten years. On the contrary, it signifies the changing notions of what it means to be a virus. Scientists have long thought that viruses are small and fairly simple. Seeing that giant viruses are neither, other scientists who may have found them before now probably assumed that they were just bacteria. Giant viruses are unique because of their immense size and vast number of genes. In comparison to other viruses, giant viruses are like lions amongst mere house cats – larger, and more complex. Since the discovery of the first few giant viruses, such as Mimivirus and Megavirus chilensis, two extremely large new ones have been identified. Known as Pandoraviruses, for their box like shape, these two particular specimens are the largest viruses ever found. How large are they? So large that they can be seen under a light microscope. Pandoraviruses are even bigger than some eukaryotic cells, the ones humans are made of, which is radical since they are after all viruses.

The number of genes Pandoraviruses have is especially noteworthy. Their genomes range from 1,900 to 2,500 genes. In comparison, the influenza virus has a mere 13 genes while humans have roughly 24,000. What's more, only 7 % of their genes have been seen before in other organisms, meaning that the other 93 % is foreign. According to Jean-Michel Claverie and Chantal Abergel, who are researchers on Pandoraviruses, "the lack of similarity of most of their genes with other life forms might be an indication that they originated from a totally different primitive cellular lineage." As of now, three domains of life are recognized: Bacteria, single-celled Archaea and Eukaryotes, the domain plants, animals, and humans belong to. Pandoraviruses' foreignness alludes to the possibility of a fourth branch of life distinct from the other three and greater biological diversity.

Hand in hand with the theory of a fourth domain is the idea that Pandoraviruses and other giant viruses descended

from primitive, living cells separate from bacteria, archaea, and eukaryotic cells. If so, then ancient cells must have embarked on two different evolutionary paths: some gave rise to “modern life” while others evolved into viruses.

Giant viruses, as far as we know, are harmless to humans. They have been found lurking in amoebas inside the human body but don't appear to cause any sickness. Only time and more research will tell if they actually can wreck havoc in the body. There is even some evidence that they are useful, not to humans but to the oceans. Pandoraviruses found in water regulate some populations of phytoplankton, which contribute significantly to the world's supply of oxygen, by preying on them. The French scientists who discovered Pandoraviruses are hopeful that future studies on the viruses will lead to further “biomedical and biotechnical innovations”. Overall, I think that the discovery of giant viruses shows that much biological diversity on earth is still unknown to humans and worth discovering.

Dear Evangelical voters (whose skipped) (2015-04-23 10:30)

The Most Smart State: Massachusetts (Republican Mitt Romney)

% of Population With Bachelor's Degrees: 38.2 %

Median Household Income (2013): \$65,339 (5th)

Average SAT Score (2013): 1553

Average IQ and Ranking: 104.3 (1st)

Massachusetts is home to some of the most prestigious schools in the world including Harvard University and the Massachusetts Institute of Technology. Tufts University, Boston College and Wellesley also call the state home. The state reported a gross state product of \$404 billion in 2012, while per capita personal income was third highest in the nation at \$53,221. Median household income in the state was \$65,339 last year. Nearly a third of working residents in the state were employed in education, health care or social assistance.

Interested in another Republican, but too early.

Bought Everdrive 64 and Superdrive emulation carts last week. (2015-04-29 14:39)

I bought the 2.5 version (firmware) of Everdrive 64. Now I can play all the Super Mario 64 mods like Starry Road on old N64s. My N64 collection isn't large enough for Instagram. I like to collect the entire N64 category, but am spending that money on 3DS, PS4 and Vita games. I also got a Pro8 Superdrive for SNES. This will emulate roms from Sdcard and save games with a Nihm battery. The SNES games are always expensive. Earthbound Reloaded was \$50. I have 30 SNES games and 20 Sega Genesis games.

Then I have two Gamepark Cannoos and 2 JXD PSP clones.

Overpriced Nintendo Amiibo isn't worth buying (2015-04-29 22:12)

Amiibo and Club Nintendo aren't worth it. Club Nintendo didn't have good enough free Virtual Console games and the known accessories are complete junk.

We're right in the middle of a storm. Nintendo botched it big time when it came to stocking the new Amiibo figures with any sort of sense, with such ridiculous, half-assed explanations it isn't unreasonable to assume the supplies are scarce on purpose. The moment folks got wind of certain Amiibo figures being hard to get, the scalpers and desperate consumers declared war and dumb things are happening as a result. People are now importing Amiibo, re-selling them for several times the retail price and of course paying several times the retail price. Other people are just unhappy and/or disappointed. Add in children, a huge part of the Nintendo fanbase to the equation, and things just get sad.

When you get caught up in a craze like this, it's easy to forget what's important. Like, for example, if the damn things are even worth buying. Maybe you're a fan of the whole NFC thing as a genre, and know exactly what you're getting into. Maybe you couldn't care less about Skylanders or Disney Infinity, but the adorable Nintendo characters are shooting daggers into your heart. Either way, buying into this stuff is a hell of an investment depending on your approach, and it's absolutely worth discussing how you're going to justify drop-kicking somebody's mom to get a hold of Best Buy's last Little Mac. Here are a few talking points.

Price

Price is definitely a factor for anything, but the scarcity and instability of the secondhand market right now is making these things fluctuate everywhere but the unreliable retail locations. If you can find what you want at Toys R Us

though, you can do pretty well. At least for the holidays, you get a slight discount when you buy two Amiibo figures. Normally, they're \$12.99 each. That's pretty good in terms of NFC figures; Disney Infinity toys are a few dollars more. If you want to import to get the more hard to find Amiibo, you're probably looking at around 20 bucks and shipping. The secondhand market is nutty, going as far as 50 dollars or more for the rare figures, like Marth. Do not pay more than around 20 dollars for an Amiibo. Do not pay more than around 20 dollars for an Amiibo. You will be disappointed.

Quality

Unfortunately, Amiibo seem prone to factory defects and paint issues. This makes pre-ordering thoroughly unappealing, which is awful considering how that's going to be the only option for a lot of these things, unless they get restocked later. It's still vague as to whether or not that's going to happen, and to what capacity. Thanks, Nintendo! That said, when you get one without any problems, they're pretty cool. Don't expect the same level of artistry as the Disney Infinity figures, however. Those things are amazing. Amiibo are still nice pieces, and some of them have a lot of neat little details, like Peach. Some of the less complicated characters, such as Little Mac, are going to be a little boring if you're not into the character or franchise. It's also worth nothing the stands on some of these figures. Some of them are a hideous shade of yellow for no clear reason, and others just have them in visually awkward places. Mileage may vary on characters like Link and Captain Falcon.

Function

Here's the big one. In terms of actual, NFC video games thingy function, Amiibo are... kinda garbage. Especially compared to the competition. Right now, three games are Amiibo compatible: Mario Kart 8, Hyrule Warriors and of course, Super Smash Bros. for Wii U. In the first two, Amiibo simply unlock some in-game items, mostly cosmetic. Using the Link Amiibo in Hyrule Warriors does net you a new weapon, but the others just give you a random item. In Mario Kart 8, you get outfits for the Mii racer depending on which characters you use (not all of them are compatible). The functionality in Smash Bros. is a bit more elaborate, with the Amiibo becoming trainable A.I. which you can customize and fight with.

What's going to make or break Amiibo is how Nintendo supports them after Smash Bros. When you look at Skylanders or Disney Infinity, you can immediately see the value. Buying a figure gives you tangible in-game content. If you pick up Hulk, you can play as Hulk. When you bust your ass to find a Little Mac, you could already play as him in Smash Bros. Unfortunately, with all the artificial scarcity going on, it's hard to imagine a game revolving around the figures working out very well. If Amiibo continue to unlock alternate costumes and items, that doesn't sit well with me either. What does "Amiibo" even mean, anyway?

Ultimately, I'd be willing to argue that without the supply issues, Amiibo probably wouldn't be the hot topic it is now. Does that mean Nintendo didn't have enough confidence in the gimmick to hit the ground running with it? Who knows. What we do know is, they don't actually do much, despite being neat little figures. If you're into collecting things, by all means these are some of the best Nintendo-themed trinkets money can currently buy (for a generally affordable price, no less). Otherwise, if you want to see what NFC figure gaming is all about, those Disney Infinity figures are super nice, and do a lot more for you. You can also, like, find all of them in stores.

17.5 May

European Union Commission investigating E-commerce (online PC game) eroding national markets. (2015-05-06 05:48)

The gradual erosion of national markets is one of the apparent side effects of the growth of on-line commerce and the ever increasing influence of the institutions and law of the European Union (of course with Grexit and Brexit this centralising tendency may not continue). More specifically the practice of having differential prices across Europe and the related practice of geo-blocking (preventing persons located outside a certain territory from accessing websites in another territory) is coming under increased scrutiny. This is a highly relevant issue for the games industry, given that games are increasingly being sold online and in digital form, and with a specific European Commission investigation

into the pricing of games. Current developments include:

- Reports that the European Commission is investigating on competition law grounds "the alleged geo-blocking of certain video games sold online for personal computers."
- An investigation, again on competition law grounds, into cross border restrictions in the EU of pay TV services offered by US film studios.
- The European Commission Digital Single Market Strategy due to be launched in May, which is likely to result in the development of digital market policy and possibly legislation.
- A European Commission Competition 'Sector Inquiry' into the E-commerce sector which is expected to conclude mid-2016.
- Raids on producers of electronic products and small domestic appliances, based at least in part on alleged infringements of competition law in relation to on-line sales.

It is apparent that the majority of these investigations involve competition law. There can be very significant implications for any companies that have been found to have breached competition law (including fines of up to 10 % of worldwide turnover). However, the wider issues could have significant implications for the games industry as a whole- with fundamental implications for how and where games are sold, the price at which they are sold and therefore the money available to develop further games. This article considers the current position in relation to the law and thoughts on the potential outcomes of the current investigations

So what is the current position with respect to the application of competition law in this context? As you might expect a lawyer to say, the position is complicated, nuanced and ultimately should be the subject of detailed and specific advice. But looking at the position broadly the following principles are relevant.

"companies cannot make agreements with third parties that have the object or effect of restricting competition"

Firstly, of some comfort to businesses, competition law acknowledges that companies have a right to determine how they conduct their own business, who they choose to deal with and the price at which they deal. However that right is not absolute and there are exceptions. Where companies have market power over competitors and customers (referred to in competition law terms as 'dominance') they have a special responsibility not to abuse that power. This can in certain circumstances require companies to deal with third parties, or not to discriminate between customers on illegitimate or arbitrary grounds (nationality is likely to be one such illegitimate ground). Typically dominance will only arise with market shares well above 30 %.

However while competition law will only rarely intervene in the conduct of a business acting on its own, companies are more restricted when it comes to the relationships with third parties. More specifically, companies cannot make agreements with third parties that have the object or effect of restricting competition. Of particular relevance to this article is the law around territorial restrictions in agreements between companies.

While it is generally deemed acceptable for a manufacturer to determine how its products are actively marketed by its distributors or resellers by allotting distributors or resellers certain exclusive territories (so called active selling), it is generally not allowed for a manufacturer to prevent those same distributors or resellers from meeting unsolicited requests for product from customers outside of their territory (so called passive selling). In this way the authorities with responsibility for enforcing competition law seek to balance the pro-competitive benefits of rationalising the distribution of products within territories, with the overarching EU goal of ensuring as far as possible that there is a single market for goods and services within the EU.

"a games manufacturer in the UK can appoint an exclusive reseller to market and sell their games in Poland and prevent them actively targeting customers the UK"

So by way of example a games manufacturer in the UK can appoint an exclusive reseller to market and sell their games in Poland and prevent them actively targeting customers the UK. However, the reseller in Poland cannot typically be prevented from fulfilling unsolicited orders from gamers in the UK.

Perhaps the best example of enforcement of this principle in practice is in relation to Nintendo. In October 2002 Nintendo and its exclusive distributors were fined a total of €167.8 million (one of the highest fines for infringement of competition law at the time) for having in place general prohibitions in its distribution agreements on the trade of its consoles and games between EU member states.

Because the European Commission sees the internet as generally a passive sales channel- any absolute requirement on third party resellers not to fulfil orders from outside the territory (which is likely to include a requirement to geo-block) is likely to fall foul of the law outlined above.

There are a number of cases other than Nintendo that follow current law and illustrate that this is more than just a theoretical risk. For example:

- In 2007 objections were raised to Apple iTunes pricing practices which were resolved by a settlement with the European Commission based on a decision by Apple to equalise prices across the EU (or more specifically reduce the price for songs in the UK). In its statement on settlement the European Commission suggests there may not have been grounds for formal action given that this was a unilateral action by Apple "The Commission's antitrust proceedings have also clarified that it is not agreements between Apple and the major record companies which determine how the iTunes store is organised in Europe. Consequently, the Commission does not intend to take further action in this case."
- In the much publicised Murphy case in 2012 the Court of Justice of the European Union held that the use of foreign decoder cards to broadcast FAPL football matches to a pub in the UK (thus avoiding Sky's licence fee) could not be prevented on the basis that obligations not to provide decoders outside the territory are contrary to competition law. The effect of this case was not however as dramatic as it might have been, given the finding of the courts that broadcasting to the public without an appropriate license could infringe intellectual property rights.

But competition law is not the only relevant law in this area. General provisions of the Treaty on the Functioning of the European Union (TFEU), and Directives also cover these areas - for example Article 26 TFEU states that "The Union shall adopt measures with the aim of establishing or ensuring the function of the internal market....the internal market shall comprise an area without internal frontiers from which a free movement of goods, persons, services and capital is ensured". The Services Directive of the European Parliament states that "Member States shall ensure that the recipient [of a service] is not made subject to discriminatory requirements... but without precluding the possibility of providing for differences in the conditions of access where those differences that are directly justified by objective criteria".

"There is therefore a real possibility that the outcomes of the various current enforcement actions and enquiries will be great centralization of prices for games (and other products) across the EU"

As the Nintendo, Apple and Murphy cases demonstrate there is little tolerance at a European level for cross border restrictions. That is also consistent with the broader aims as outlined in the TFEU and the Services Directive, as well as those that wish to create a single EU economy. There is also a personal element to some of these concerns - Margrethe Vestager - Commissioner for Competition EU has said "I, for one, cannot understand why I can watch my favourite Danish channels on my tablet in Copenhagen - a service I paid for - but I can't when I am in Brussels."

There is therefore a real possibility that the outcomes of the various current enforcement actions and enquiries will be great centralization of prices for games (and other products) across the EU.

However there are clearly rational objections to any single market approach. Some differences in prices across the EU may be rational however- and not simply on the basis of different costs of distribution. In a digital world the cost price differences between prices in the sale of games are not likely to be significant. But discrimination between member states can be pro-competitive in ensuring that the price of the games matches the customer's ability to pay. A single price across the EU risks that games will be set at prices that are relatively cheap in North and Western Europe, and relatively expensive in South and Eastern Europe. Ultimately this could lead to respectively oversupply and undersupply depending on the area, and may limit the profits available to reinvest in producing better games and games technology. Others complain that the move towards a single market will undermine the cultural heritage across Europe, favouring instead larger companies with pan-European operations.

It remains to be seen what the outcome of the enquiries and the investigations will be. This is however something the games industry participants should monitor carefully and feed into with their views when they have the chance. The outcome of the current inquiries could have a profound impact on the way games and other digital content is market, sold and consumed in the EU.

New Windows Store development kits fully compatible with Android and iOS app source code (2015-05-06 06:24)

It's no secret that Microsoft is way behind iOS and Android in the mobile space. At the Build conference in San Francisco this week, however, the company made its intentions clear. It wants to make it as easy as possible for developers on other platforms to bring games and apps to the Windows Store. In fact, to make the process even easier, Microsoft is introducing new dev kits that will enable ports to come to the Windows Store "with minimal code modifications." Revamped apps will essentially become Universal Windows Apps, and so whether they're running on Windows Phones or Windows 10, they'll be integrated with Cortana and Xbox Live and will have functionality not found in previous iOS or Android versions.

"The theme is to start with your existing code base, and then extend," Operating Systems Group President Terry Myerson said, according to ZDnet. "We want to embrace devs where they are."

Ultimately, Microsoft is pushing for a unified storefront for Windows 10 across all devices. The Universal Windows Platform idea should include PCs, smartphones, tablets, and even the new HoloLens headset. According to a blog post from Myerson, Microsoft believes it can push Windows 10 out across one billion devices within two to three years of Windows 10's availability.

Scientific Linux 7.1 review (2015-05-14 12:56)

I was wise enough to use Scientific Linux 6.6 at home. I started the SL6x series with 6.2. In 2003, I started out with RHEL 3.3. I don't like 7.0 and would use it later. Why would anyone prefer SL 7.0 for daily desktops over SL 6.6 when everything is at stake? It wasn't wise to use SL 7.0, it actually crashed twice. I started out with RHEL 3.3 from CompUSA.

Let's start with the GOOD news: Scientific Linux 7.1 is vastly improved over the disaster known as Scientific Linux 7.0. The coders and developers at both Red Hat and Scientific Linux need to be highly commended for their efforts they put into 7.1. The BAD news is Scientific Linux 7.1 is UNPOLISHED and still needs a lot of work.

One of the advantages of having a pair of mirror image machines is you can spot problems that would normally have you tearing out your hair trying to solve. I had no problem this time around doing the initial install of Scientific Linux 7.1. It was only after I did the install that I started having troubles. The single biggest problem was in adding the latest version of kmod-nvidia drivers. I also ran into issues installing VMware Player 7.1.0 – which installed just fine... but then crashed the first time I started it up. It was the problem with the Nvidia drivers that would throw me. I found every hack in the book, but no matter what I did, the second I rebooted the machine I got a Black Screen with a blinking cursor. After 5 complete installations I was set to throw in the towel and live without the Nvidia working. While I did my install using manual partitioning, my buddy did his using LVN partitioning, but did not want to lose his Windows partitions. He got the same results as I did. So we decided he should try to manually partition his SSD. He never made it past the point where he could install the OS, which I breezed through. We decided to check into BIOS. The first thing we noticed is that he had two CD-ROM drives listed, not one, even though he only had one physical device: One UEFI and one NON-UEFI. The UEFI was listed first, then came the NON-UEFI. Just for fun we had him change the order and placed the NON-UEFI CD-ROM first. He then rebooted and had ZERO problems with the install. Next he then found an interesting link in regards to installing kmod-nvidia drivers in Scientific Linux 7.1, and followed the instructions, and PRESTO he had Nvidia up and running.

<http://linuxsysconfig.com/2014/09/nvidia-drivers-on-Scientific Linux-7/> Excited by the news, I jumped on it, only to end up with a Black screen and a blinking cursor. One other difference in our install procedures was I installed the whole thing – 7 GB – which required that I install it from a thumb drive, while he installed his from a DVD live version. In BIOS the thumb drive shows up as a UEFI hard drive. Based on my buddy's experience I went over to the "Boot" portion of the BIOS and found in there a NON-UEFI version of the thumb drive. While I could not put this version in train I could over-ride the boot sequence and boot directly from this NON-UEFI version. The first thing I did was to install the LVN version and followed the hack my buddy found... and like him my system came up with Nvidia. I then went back and installed a test version via manual partitioning, but first I checked out to see what partitions were created by the automatic LVN partitioning scheme. What was created a /boot, a /home, a /, and /swap; where as in all my installs there was also a /boot/efi partition. This time I left out the /boot/efi partition and the software installed just fine!!! Also the hack worked just fine and the kmod-nvidia drives installed just fine as well. For the 8th time I did a total re-install only this time I booted from the

NON-UEFI drive and left out the /boot/efi partition during the install. . It is just a guess but I suspect that Microsoft with its undue influence over everything, everything now defaults to UEFI, to include UEFI devices, motherboards, etc, and these receive priority over non-UEFI items, thus if you have a recent vintage motherboard, or other devices, they are set up to comply with the Microsoft UEFI policy, but to be backwards compatible, there is a list of non-UEFI items. If you are installing Scientific Linux 7.1 your first trip should be to BIOS, to ensure that whatever device you are booting from is **NOT UEFI ENABLED** . If you are doing Custom Manual Partitioning

DO NOT install a /boot/efi partition – you do however need a /boot partition. Once you have done that the rest of the install is rather straight forward.

The BIOS hack needs to be published and save everyone from tearing out their hair in frustration. Were it not for the fact I was working with a mirrored computer I might not have caught this.

The biggest problem with Scientific Linux 7.1 is that it is grossly unpolished. There is no reason that you should have to jump through a bunch of hoops just to install kmod-nvidia. A "yum install kmod-nvidia" should be all that is needed. Other problems come to the installation of Users and Groups. In Fedora, all you do is go to Administration -> click on "Users and Groups" and be on your merry way. Both in Scientific Linux 7.0 1406 and 7.1 1503 there is no easy way to add Users and Groups, as the administrative icon is missing. If you want to add Users and Groups you need to be Old School and do it from the CLI. That said I was able to add the Users and Groups icon back in: You need to 1) enable several repos including elrepo, epel, extras, and nux-dextop. 2) Run yum grouplist 3) Run yum groupinstall "MATE Desktop", yum groupinstall "Xfce", yum groupinstall "Milkymist", and groupinstall "Haskell". It is somewhere in one of those four groups. When you next click on Applications -> Administration you will find the familiar "Users and Groups" icon.

What about tunes?!? If you are looking for kscd, forget it, I've looked and still can not find it. The news is slightly better if you are a fan of Amarok. If you plan to run amarok do try to install it

before you add your kmod-nvidia drivers. Before I "fixed" the OS to run kmod-nvidia, I had no problem installing amarok, and it worked just fine; after I "fixed" it so I could run kmod-nvidia I went to install amarok I got the following message:

Error: Multilib version problems found. This often means that the root cause is something else and multilib version checking is just pointing out that there is a problem. Eg.:

1. You have an upgrade for qtwebkit which is missing some dependency that another package requires. Yum is trying to solve this by installing an older version of qtwebkit of the different architecture. If you exclude the bad architecture yum will tell you what the root cause is (which package requires what). You can try redoing the upgrade with `-exclude qtwebkit.otherarch ...` this should give you an error message showing the root cause of the problem.
2. You have multiple architectures of qtwebkit installed, but

yum can only see an upgrade for one of those architectures.
If you don't want/need both architectures anymore then you can remove the one with the missing update and everything will work.

3. You have duplicate versions of qtwebkit installed already.

You can use "yum check" to get yum show these errors.

...you can also use `--setopt=protected_multilib=false` to remove this checking, however this is almost never the correct thing to do as something else is very likely to go wrong (often causing much more problems).

Protected multilib versions: qtwebkit-2.3.3-3.el7.x86_64 != qtwebkit-2.3.4-3.el7.i686

I suspect the problem occurs because when you run the hack that "fixes" it so you can install kmod-nvidia part of it requires you to install 32 bit libraries. To quote the source:

"When running a 64bit OS, the 32bit Nvidia libraries may also be needed for compatibility, I always install them. The good thing is that kmod-nvidia also disables nouveau automatically, so no more manually tweaking modprobe and grub

"yum install kmod-nvidia nvidia-x11-drv-32bit"

I suspect that the `qtwebkit-2.3.4-3.el7.i686` is 32 bit and that conflicts the amarok install. You might try to get around the problem by installing amarok before you fix the nvidia drivers problem. No guarantee, but it is worth a shot.

The alternatives included in Scientific Linux 7.1 are sparse – Rythembox being the ONLY alternative.

Another place where Scientific Linux 7.1 falls down is when it comes to turning ON and turning OFF services. You use to go to Applications -> Administration and find "Services", you go there open it up and then at a glance you could see what was running, and what was not. You could also choose to STOP and/or RE-START any given Service. Like "Users and Groups" this too is missing. There may or may NOT be something similar in Scientific Linux 7.1: If you go to Favorites -> System Settings -> find System Administration -> find and open Startup and Shutdown -> Service Manager you have something that looks sort of like the old service manager. things such as ntp, etc, are missing. The *old* version was far better, and for better or worse, it should be included as an alternate to the "new" version.

One place that is a clear improvement is VMware Player. Once I "fixed" the problem with installing the kmod-nvidia drivers, it also it seemed to "fix" the problem with the VMware Player. It now opens all my Virtual Machines without a problem. One BIG improvement was that even though during the install the 1 TB SATA is not in the train (it is listed as being found, just not listed in the boot sequence) Scientific Linux 7.1 goes out and can see all the directories on that HD. You just need to select the directory, enter your secret sauce root password, and BINGO!! you now have access to the data on your other drive!!!

OTOH if you are looking for Games – card, or board – SORRY you are out of luck. I've gone in search of these and none can be found.

CONCLUSION: Unlike Scientific Linux 7.0 1406 which was a Total Disaster, Scientific Linux 7.1 1503 is very much a usable OS though still lacking in features. It is clearly NOT designed for a newbie who would through up their hands in total defeat. It really is a DIY type of OS – if you are willing to sink a lot of time into it, it really is a nice OS with some nice features, but there are clearly places where it can be improved: It still needs a way for people to Add Users and Groups; kmod-nvidia should be a rather straight forward install without needing to jumps through hoops; amarok, kscd, should be part of the multimedia package set as these are two old standards people know and love; games – totally missing and found on every distro except Scientific Linux 7.1 (and probably RHEL 7.1) need to be added; Administrative tools such as the "classic" "Services" that was found under Application -> Administration should be reinstalled; and overall the OS needs to be polished. In short Scientific Linux 7.1 needed far too much hacking to be made usable. Unless I encounter other problems I can now say I will be migrating off Fedora 20 and to Scientific Linux 7.1. While it still needs work – a lot of work – Scientific Linux 7.1 is quite usable, even if not as polished as Fedora 20, and 21. The Problem with Fedora, is you are always on the Bleeding Edge – and trust me you do a LOT of

BLEEDING; Scientific Linux by contrast is nice and stable for the most part, however Scientific Linux 7.x has been quite a disappointment. With the release of Scientific Linux 7.1 1503 I can now say it is usable even if it still needs work. For the Newbies out there I would pass on Scientific Linux 7.1, and wait until Scientific Linux 7.2 is released when hopefully many of the problems I have encountered have been fixed; for the more experienced user with a handful of tricks published above I think you'll really enjoy this release, understand this is closer to a Beta or a RC1 release than a final release since it still needs work.

Top 10 U.S. fighter jets (2015-05-16 13:49)

10. F-4 PHANTOM The McDonnell Douglas F-4 Phantom II[N 1] is a tandem two-seat, twin-engine, all-weather, long-range supersonic jet interceptor fighter/fighter-bomber originally developed for the United States Navy by McDonnell Aircraft.[1] It first entered service in 1960 with the U.S. Navy. Proving highly adaptable, it was also adopted by the U.S. Marine Corps and the U.S. Air Force, and by the mid-1960s had become a major part of their respective air wings. The Phantom is a large fighter with a top speed of over Mach 2.2. It can carry over 18,000 pounds (8,400 kg) of weapons on nine external hardpoints, including air-to-air missiles, air-to-ground missiles, and various bombs. The F-4, like other interceptors of its time, was designed without an internal cannon. Later models incorporated a M61 Vulcan rotary cannon. Beginning in 1959 it set 15 world records for in-flight performance,[3] including an absolute speed record, and an absolute altitude record. During the Vietnam War the F-4 was used extensively; it served as the principal air superiority fighter for both the Navy and Air Force, and became important in the ground-attack and reconnaissance roles late in the war. The Phantom has the distinction of being the last U.S. fighter flown to attain ace status in the 20th century. During the Vietnam War the USAF had one pilot and two weapon systems officers (WSOs),[5] and the US Navy one pilot and one radar intercept officer (RIO), achieve five aerial kills against other enemy fighter aircraft and become aces in air-to-air combat.[6] The F-4 continued to form a major part of U.S. military air power throughout the 1970s and 1980s, being gradually replaced by more modern aircraft such as the F-15 Eagle and F-16 in the U.S. Air Force; the Grumman F-14 Tomcat in the U.S. Navy and the F/A-18 Hornet in the U.S. Navy and U.S. Marine Corps. The F-4 Phantom II remained in use by the U.S. in the reconnaissance and Wild Weasel (suppression of enemy air defenses) roles in the 1

9. F-14 TOMCAT The Grumman F-14 Tomcat is a supersonic, twinjet, two-seat, variable-sweep wing fighter aircraft. The Tomcat was developed for the United States Navy's Naval Fighter Experimental (VFX) program following the collapse of the F-111B project. The F-14 was the first of the American teen-series fighters which were designed incorporating the experience of air combat against MiG fighters during the Vietnam War. The F-14 first flew in December 1970 and made its first deployment in 1974 with the U.S. Navy aboard USS Enterprise (CVN-65), replacing the McDonnell Douglas F-4 Phantom II. The F-14 served as the U.S. Navy's primary maritime air superiority fighter, fleet defense interceptor and tactical reconnaissance platform. In the 1990s, it added the Low Altitude Navigation and Targeting Infrared for Night (LANTIRN) pod system and began performing precision ground-attack missions. The Tomcat was retired from the U.S. Navy's active fleet on 22 September 2006, having been supplanted by the Boeing F/A-18E and F Super Hornets. As of 2014, the F-14 was only in service with the Islamic Republic of Iran Air Force, having been exported to Iran in 1976, when the U.S. had amicable diplomatic relations with Iran. In this photo released by the U.S. Navy, an F-14D Tomcat from Fighter Squadron Three One (VF-31), performs a fly by past the Nimitz-class aircraft carrier USS Dwight D. Eisenhower (CVN 69) in the Atlantic Ocean on June 19, 2006. For the past 30 years, the F-14 Tomcat has assured U.S. air superiority, playing a key role in ensuring victory and preserving peace around the world. The F-14 Tomcat will be removed from service and officially stricken from the inventory in September of 2006. (AP Photo/U.S. Navy, Dale Miller)

8. A/V-8B Harrier II The McDonnell Douglas (now Boeing) AV-8B Harrier II is a single-engine ground-attack aircraft that constitutes the second generation of the Harrier Jump Jet family. Capable of vertical or short takeoff and landing (V/STOL), the aircraft was designed in the late 1970s as an Anglo-American development of the British Hawker Siddeley Harrier, the first operational V/STOL aircraft. Named after a bird of prey,[8] it is primarily employed on light attack or multi-role missions, ranging from close air support of ground troops to armed reconnaissance. The AV-8B is used by the United States Marine Corps (USMC), the Spanish Navy, and the Italian Navy. A variant of the AV-8B, the British Aerospace Harrier II, was developed for the British military, while another, the TAV-8B, is a dedicated two-seat trainer. The project that eventually led to the AV-8B's creation started in the early 1970s as a cooperative effort between the United States and United Kingdom (UK), aimed at addressing the operational inadequacies of the first-generation Harrier. Early efforts centered around a powerful revamped Rolls-Royce Pegasus engine to dramatically improve the capabilities of the Harrier. Due to budgetary constraints, the United Kingdom abandoned the project in 1975. Following the withdrawal of the UK, McDonnell Douglas extensively redesigned the earlier AV-8A Harrier to create the AV-8B. While retaining the general layout of its predecessor, the aircraft incorporates a new wing, an elevated cockpit, a redesigned fuselage, one extra hardpoint per wing, and other structural and aerodynamic refinements. The aircraft is powered by an upgraded version of the Pegasus, which gives the aircraft its V/STOL ability. The AV-8B made its maiden flight in November 1981 and entered service with the USMC in January 1985. Later upgrades added a night-attack capability and radar, resulting in the AV-8B(NA) and AV-8B Harrier II Plus, respectively. An enlarged version named Harrier III was

7. A-10 THUNDERBOLT (WARTHOG) The Fairchild Republic A-10 Thunderbolt II is an American twin-engine; straight-wing jet aircraft developed by Fairchild-Republic in the early 1970s. The only United States Air Force aircraft designed solely for close air support of ground forces; the A-10 was built to attack tanks; armored vehicles; and other ground targets with limited air defenses. The A-10 was designed around the GAU-8 Avenger; a 30 mm rotary cannon that is the airplane's primary armament and the heaviest such automatic cannon mounted on an aircraft. The A-10's airframe was designed for survivability; with measures such as 1; 200 pounds (540 kg) of titanium armor[4] for protection of the cockpit and aircraft systems that enables the aircraft to continue flying after taking significant damage. The A-10A single-seat variant was the only version built; though one A-10A was converted to the A-10B twin-seat version. In 2005; a program was begun to upgrade A-10A aircraft to the A-10C configuration. The A-10's official name comes from the Republic P-47 Thunderbolt of World War II; a fighter that was particularly effective at close air support. The A-10 is more commonly known by its nicknames "Warthog" or "Hog". It also has a secondary mission; where it provides airborne forward air control; directing other aircraft in attacks on ground targets. Aircraft used primarily in this role are designated OA-10. With a variety of upgrades and wing replacements; the A-10's service life may be extended to 2028. 376th Air Expeditionary Wing; AFCENT; Airmen; Kyrgyz Republic; Kyrgyzstan; Staff Sgt. Robert Barnett; Transient; Transit Center at Manas; U.S. Air Force; United States

6. F/A-18 HORNET The McDonnell Douglas (now Boeing) F/A-18 Hornet is a twin-engine supersonic, all-weather carrier-capable multirole combat jet, designed as both a fighter and attack aircraft (F/A designation for Fighter/Attack). Designed by McDonnell Douglas and Northrop, the F/A-18 was derived from the latter's YF-17 in the 1970s for use by the United States Navy and Marine Corps. The Hornet is also used by the air forces of several other nations. The U.S. Navy's Flight Demonstration Squadron, the Blue Angels has used the Hornet since 1986. The F/A-18 has a top speed of Mach 1.8 (1,190 mph or 1,915 km/h at 40,000 ft or 12,190 m). It can carry a wide variety of bombs and missiles, including air-to-air and air-to-ground, supplemented by the 20 mm M61 Vulcan cannon. It is powered by two General Electric F404 turbofan engines, which give the aircraft a high thrust-to-weight ratio. The F/A-18 has excellent aerodynamic characteristics, primarily attributed to its leading edge extensions (LEX). The fighter's primary missions are fighter escort, fleet air defense, Suppression of Enemy Air Defenses (SEAD), air interdiction, close air support and aerial reconnaissance. Its versatility and reliability have proven it to be a valuable carrier asset, though it has been criticized for its lack of range and payload compared to its earlier contemporaries, such as the Grumman F-14 Tomcat in the fighter and strike fighter role, and the Grumman A-6 Intruder and LTV A-7 Corsair II in the attack role. The Hornet saw its first combat action in 1986 during Operation El Dorado Canyon and subsequently participated in 1991 Operation Desert Storm and 2003 Operation Iraqi Freedom. The F/A-18 Hornet provided the baseline design for the Boeing F/A-18E/F Super Hornet, a larger, evolutionary redesign of the F/A-18. A KC-135 Stratotanker from the Kansas Air National Guard's 190th Air Refueling Wing prepares to refuel Navy F/A-18 Hornets over Wake Island during an escort mission from Japan.

5. F-117 NIGHTHAWK The Lockheed F-117 Nighthawk is a single-seat, twin-engine stealth ground-attack aircraft formerly operated by the United States Air Force (USAF). A product of Lockheed Skunk Works and a development of the Have Blue technology demonstrator, the F-117 was the first operational aircraft to be designed around stealth technology. The maiden flight for the type was conducted in 1981, and it achieved initial operating capability status in October 1983.[1] The F-117 was "acknowledged" and revealed to the world in November 1988.[4] The F-117 was widely publicized for its role in the Persian Gulf War of 1991. It was commonly referred to as the "Stealth Fighter", although it was a strictly ground-attack aircraft. The F-117 also saw combat in Yugoslavia; during which the only aircraft of the type to be lost in combat was shot down by a surface-to-air (SAM) battery on 27 March 1999. The Air Force retired the F-117 on 22 April 2008,[2] primarily because of the fielding of the F-22 Raptor[5] and the impending introduction of the multirole F-35 Lightning II.[6] Sixty-four F-117s were built, 59 of which were production versions with five demonstrators/prototypes. A U.S. Air Force F-117A Nighthawk stealth fighter aircraft from the 37th Tactical Fighter Wing refuels from a U.S. Air Force KC-10 Extender aircraft from the 22nd Air Refueling Wing during Operation Desert Shield. The Nighthawk is en route to Saudi Arabia.

3. F-15 STRIKE EAGLE The McDonnell Douglas (now Boeing) F-15E Strike Eagle is an American all-weather multirole fighter, derived from the McDonnell Douglas F-15 Eagle. The F-15E was designed in the 1980s for long-range, high speed interdiction without relying on escort or electronic warfare aircraft. United States Air Force (USAF) F-15E Strike Eagles can be distinguished from other U.S. Eagle variants by darker camouflage and conformal fuel tanks mounted along the engine intakes. The Strike Eagle has been deployed for military operations in Iraq, Afghanistan, and Libya. During these operations the F-15E has carried out deep strikes against high-value targets, combat air patrols, and providing close air support for coalition troops. It has also seen action in later conflicts and has been exported to several countries. An F-15E Strike Eagle deploys countermeasure flares Nov. 12 over Afghanistan. The aircraft is assigned to the 391st Expeditionary Fighter Squadron at Bagram Airfield, Afghanistan. (U.S. Air Force photo/Staff Sgt. Aaron Allmon)

2. F-35 LIGHTNING II The Lockheed Martin F-35 Lightning II is a family of single-seat, single-engine, fifth-generation multirole fighters under development to perform ground attack, reconnaissance, and air defense missions with stealth capability. The F-35 has three main models; the F-35A is a conventional takeoff and landing variant, the F-35B is a short take-off and vertical-landing variant, and the F-35C is a carrier-based variant. The F-35 is descended from the X-35, the product of the Joint Strike Fighter (JSF) program. It is being designed and built by an aerospace industry team led by Lockheed Martin. Other major F-35 industry partners include Northrop Grumman, Pratt & Whitney and BAE Systems. The F-35 took its first flight on 15 December 2006. The United States plans to buy 2,443 aircraft. The F-35 variants are intended to provide the bulk of its manned tactical airpower for the U.S. Air Force, Marine Corps and Navy over the coming decades. Deliveries of the F-35 for the U.S. military are to be completed in 2037. The U.S. Navy variant of the F-35 Joint Strike Fighter, the F-35C, conducts a test flight over the Chesapeake Bay. Lt. Cmdr. Eric "Magic" Buus flew the F-35C for two hours, checking instruments that will measure structural loads on the airframe during flight maneuvers. The F-35C is distinct from the F-35A and F-35B variants with larger wing surfaces and reinforced landing gear for greater control when operating in the demanding carrier take-off and landing environment. (U.S. Navy photo courtesy Lockheed Martin/Released)

1. F-22 RAPTOR The Lockheed Martin F-22 Raptor is a single-seat, twin-engine fifth-generation supersonic supermaneuverable fighter aircraft that uses stealth technology. It was designed primarily as an air superiority fighter, but has additional capabilities that include ground attack, electronic warfare, and signals intelligence roles. Lockheed Martin Aeronautics is the prime contractor and is responsible for the majority of the airframe, weapon systems and final assembly of the F-22. Program partner Boeing Defense, Space & Security provides the wings, aft fuselage, avionics integration, and training systems. The aircraft was variously designated F-22 and F/A-22 prior to formally entering service in December 2005 as the F-22A. Despite a protracted development, the United States Air Force considers the F-22 a critical component of their tactical air power, and claims that the aircraft is unmatched by any known or projected fighter.[7] Lockheed Martin claims that the Raptor’s combination of stealth, speed, agility, precision and situational awareness, combined with air-to-air and air-to-ground combat capabilities, makes it the best overall fighter in the world today. Air Chief Marshal Angus Houston, former Chief of the Australian Defence Force, said in 2004 that the "F-22 will be the most outstanding fighter plane ever built." The maneuverability of an F-22 Raptor is demonstrated during the 2010 Aviation Nation Nellis Open House Nov. 12. The open house is an opportunity for the Las Vegas community to view aerial demonstrations and static displays of various aircraft from the military. (U.S. Air Force photo by Tech. Sgt. Michael R. Holzworth

Bought expensive Videogames (2015-05-30 11:48)

I bought some rare PS2 games this week including Rule of Rose for PS2 and Shadow Hearts for PS2 and Fire Emblem Shadow Dragon for Nintendo DS. Rule of Rose costing \$135. Fire Emblem for DS was expensive. Maybe someday I'll have the Gamecube version. All three are supposed to collectors items. I saw the Toyriffic game store in Minnesota hyping Rule of Rose for \$250 on their facebook page and someone bought it for \$250. I don't think Rule of Rose was very good, IGN gave it a 4.5 out of 10 in gameplay and 4.9 overall. I knew I looked at this IGN review in 2006 when the game came out.

17.6 June

Cold War II (2015-06-01 15:59)

The Pentagon is trying to reform the military to deal with Chinese PLA military base expansion in the future cold war II . Maybe decades in the future, the PLA will be in Afghanistan. The BBC won't tell us that there was meant to be a cold war with the PLA since the British Empire rule ended in the 1950s (technically in the beginning of the cold war) or Auckland's Folly. BBC News still feels sensitive about this British Empire subject, and won't talk about it right now. The New York Times isn't much better.

Macintosh gift (2015-06-03 08:36)

I may be receiving a Intel Macintosh so I can use it for Macintosh certifications or Macintosh apps. In the future, I will receive an iPad 4. It feels a little behind the times with my Windows 8.1, Linux and Android devices. Leo Leport on Twitter always brags about his iMac and Macintosh appearing in all Iron Man movies. I accomplished everything with either Windows and Linux. Maybe I'm getting Intel Mac for employee karma with my employer!

Screen Size 27 inches

Processor Intel Xeon

RAM 12 GB

Videogames are bigger than Hollywood (2015-06-06 14:58)

The majority of video games in the U.S. are purchased and played by adults. The largest titles make money that Hollywood films could only dream of raking in, and the biggest players in the industry run multibillion-dollar multinational operations that employ thousands of people. Yet many consumers still think of gaming as a kid's thing that doesn't merit serious consideration or scrutiny. In an age where our culture recognizes previously sniffed-about industries like professional sports as much more than child's play, it's time to get over that same hump about video games.

Games, like film, TV, and literature before them, are commercialized art and products of our culture. They can be great or terrible, memorable or forgettable, and everything in between. They can be five minutes of dreck you play on your phone on the bus, or 500 hours of life-changing tramping around a richly imagined virtual world.

In 2013 alone they were also a \$21 billion business in the U.S. And still, in the rare instance that the nightly news even mentions video games, it's likely to be an ill-informed pundit grandstanding about violence in games, or video footage of "booth babes" and cosplayers at a convention, without considering the huge amount of money, time, and people involved.

This week, as they do every June, about 50,000 video game industry professionals and game-focused media will descend on Los Angeles for E3.

Nominally a trade industry conference, E3 has for nearly 20 years been not just a trade show but rather, a caffeine-fueled orgy of blazing virtual guns, polygon-count comparisons, and top-volume trailers for the Next Big Game.

By the numbers...

- 59 % of Americans play video games
- 51 % of all American households have a dedicated video game console
- 58 % of all American adults have a smartphone
- 71 % of players are over age 18
- 81 % of young adults ages 18-29 play games
- 23 % of seniors over age 65 play games
- 48 % of players are girls or women
- 36 % of players are women over age 18
- 17 % of players are boys under age 18

Sources: Nielsen, Pew, and the ESA.

Large international companies dominate the show floor, with smaller developers scattered through hundreds of side-rooms, all of them holding endless screenings, demos, and interviews, clamoring for attention.

Major tech companies like Sony and Microsoft use the event not just to show off their games but also to announce major hardware launches, like last year's PlayStation 4 and Xbox One.

But why does it matter, you might ask? Why do so many people get so caught up in the announcements, the trailers, the projections, the marketing, and the hype? Why should anyone except the most hardcore of console enthusiasts care about a single word that comes out of the L.A. Convention Center this week?

Because despite the lingering popular conception of video games as child's play — and, specifically, boy's toys — they are anything but. The business is, well, serious business.

What Does A Gamer Look Like?

There is a tendency almost toward ethnography in the mainstream media whenever video games come up.

Earnest news anchors and reporters approach "the gamer" as a heretofore unknown species, a sub-type of aggressive young man whose befuddled mother doesn't understand his "Nintendo" but who nonetheless stands a very good chance of growing up to be a productive member of society.

And sure, teenage boys like to play video games. But the truth of the matter is, they are far from alone.

In 2014, one might as well talk about a "TV-er" or a "movie-er" as a "gamer."

About 59 % of Americans play video games, according to estimates from the ESA (the gaming industry's major trade and lobbying group).

Some quick math says that in a country of about 315 million, that's just shy of 186 million players.

How does that compare to other media?

Movies: about 68 % of Americans (214m) see movies in the theater (MPAA - PDF)

Cable: roughly 100 million Americans have paid-TV (cable/satellite/fiber) subscriptions

Premium cable: Game of Thrones, considered wildly successful, has about 18 million viewers per week.

Broadcast TV: The top-rated show the week of May 19 (ABC's Dancing With The Stars) drew 15.5 million viewers

Netflix: Had a little over 33 million U.S. subscribers at the end of 2013.

Games now are at least as mainstream as any other pop culture in our fragmented media landscape.

Who's playing? Pretty much everyone.

Having "a Nintendo" just isn't what it used to be. In 2014, there are lots of players competing in the video game space — but the biggest competitor is one that makes the smallest devices.

It's Not Just Shooters

The following list of 2013's best-selling console games makes it clear that while big-budget, violent blockbusters are big business, so too are plenty of other kinds of games:

Grand Theft Auto V

Call Of Duty: Ghosts

Madden NFL 2015

Battlefield 4

Assassin's Creed IV: Black Flag

NBA 2K14

Call Of Duty: Black Ops II

Just Dance 2014

Minecraft

Disney Infinity

According to ESA data, 32 % of 2013's top games were "action" and another 20 % were specifically shooters, meaning half of all top-selling games fell outside of those two categories.

For PC-only games, strategy (38 %) and casual (28 %) titles take the day, while shooters and action titles together come to less than 10 %.

Enter Apple, and the more than 500 million iPhones they've sold since 2007. Sure, mobile devices let us use Facebook and access mobile boarding passes and stream video and all the rest — but what they mostly let us do is play games. In 2013, the most-downloaded and highest-grossing iOS app — ahead of YouTube, Netflix, Facebook, SnapChat, and Instagram — was Candy Crush Saga.

Candy Crush has seen its star fall a bit since it dominated the mobile airwaves last year, granted. But when publisher King prepared for their IPO this March, they claimed 408 million monthly active users.

That's not 408 million people who downloaded the app once because some friend told them to and forgot about it; that's players who actually open it and play the game somewhat regularly.

Predictably, Candy Crush and other "casual" puzzle, card, trivia, and social (think Words With Friends) games dominate mobile gaming. But what of all the "traditional" console and PC players out there?

Back in the land of "traditional" or "hardcore" gaming, the field is more evenly split.

Microsoft has sold about 83 million Xbox 360s, Sony's sold a similar 80 million PlayStation 3 systems, and Steam, the most heavily-used PC gaming service, has over 75 million users.

Specifically tracking who's playing what and where can be very difficult. Although every publisher knows exactly how many copies of every game it's sold, the numbers are rarely public. And while the numbers of physical retail copies — the actual discs — of games sold are closely tracked, physical copies now account for less than half (47 %) of estimated video game spending.

Although in 2014 the major industry market research group has started tracking digital sales, for the most part that remaining 53 % remains largely mysterious, as each digital storefront — including Xbox Live, PlayStation Network, Steam, and other, smaller outlets — keeps its own numbers proprietary.

Billions... With A B

There is a whole enormous world of cheap and free small, independently developed and produced games out there. But, as with movies and books, the big-budget blockbusters tend to make headlines and grab attention.

When Grand Theft Auto V launched, it reached \$1 billion in sales in three days.

Seeing a large studio spend between \$50 and \$100 million on a video game is no longer uncommon. The most expensive video game produced so far is Grand Theft Auto V, which cost a reported \$265 million to make.

That puts the big-budget blockbuster games about on par with big-budget blockbuster films, money-wise. Legendarily pricey Avatar probably cost Fox about \$280 million, and three years later Disney spent a reported \$220 million on The Avengers. So GTA V fits right in that range.

But gaming publishers, like Hollywood studios, are finding that the rate of return on that ludicrously large investment can sometimes be worth the risk.

In the history of the American box office, there are 18 movies that have grossed \$1 billion or higher. The fastest to do it was Avatar, which hit the 10-digit gross mark in a scant 17 days.

When Grand Theft Auto V launched last September, it reached \$1 billion in sales in three days.

That's three days. Less than a week. The game hit store shelves and digital storefronts on Tuesday morning, and by Friday had sold \$1 billion worth of copies.

Even acknowledging that many of the sales were pre-orders that took place over the months beforehand, and even accepting that a \$60 game reaches money-based milestones faster than a \$10 movie ticket does, that's ridiculously fast. The previous record-holder was 2011's Call of Duty: Black Ops II, which cruised to an easy 15-day billion after making the first half in just 24 hours.

But smaller-budget games, in the mobile-friendly era, can make bank even more reliably than their big-budget cousins. Those "free" Facebook and mobile apps, laden with microtransactions and \$0.99 shortcuts, are cash cows for their publishers.

The specific numbers are tightly-guarded, but back in February, a hacker released what was allegedly the financial

information from mega-hit Clash of Clans (the new Candy Crush Saga, as these things go).

Nobody verified the data, so it's worth taking with a grain of salt, but the images released claimed that developer Supercell takes in \$5 million per day from its free-to-play games.

How The Game Makers Fail Gamers

Whenever there are billions of dollars at stake, there are companies who will try to make a few million more by cutting corners and not caring how it harms workers or consumers.

For example, video game publisher EA managed to take Consumerist's Worst Company In America trophy two years running before losing out to Time Warner Cable (and ultimately, to Comcast) this spring.

That's a lot of ill-will for an entertainment media company to have built up over a few years, particularly as their games remain generally well-liked top sellers. But when consumers vent their hostility at the way EA has treated them, they have ample targets just from the last 2-3 years:

The class-action price-fixing suit in which EA was found to be "anticompetitive" with its sports games

The complete and utter debacle of the always-online (until it wasn't) SimCity (2013) launch

Using college athletes' likenesses without their permission to sell more sports games

Slyly trying to discourage negative reviews of a (pretty terrible) mobile game

Allegedly knowing ahead of time a \$60 game was shipping with game-breaking bugs and lying about it

As games become more popular, more ephemeral, and more and more part of a streaming on-demand or rental-access future, consumers have more chances to get screwed over and less opportunity for recourse, meaning game publishers will only continue to ship more titles that are broken and incomplete.

If the movie studios sent films to theaters with missing reels and promised to send out the missing minutes a within a few weeks of release, it would be front page news.

If book publishers knowingly sent out books with screwed-up page numbers and chapters in the wrong order with the promise that you'd get a fixed version in a month or so, and another fixed version a few weeks later, then another, and another, no one would buy books anymore.

We should be holding video game publishers to the same standards.

Linux Mint 17.1 review (2015-06-12 18:17)

The Linux Mint team recently released Linux Mint 17.1—a somewhat minor but still welcome upgrade to the Ubuntu-based ecosystem. And while Linux Mint 17.1 arrives as it usually does (a few weeks after the release of a new version of Ubuntu), version 17.1 is not based on Ubuntu's latest effort, 14.10. Instead, this edition of Mint remains tied to the last Long Term Support (LTS) release, Ubuntu 14.04.

Review: Long-term support and stability plus tweaks for desktop? Delicious!

This marks the first time Linux Mint has not used the newest version of Ubuntu for a release. But if you paid attention to the curious approach of Linux Mint 17.0, you'll know that was the plan all along. These days, Mint will not be changing its Ubuntu base again until the next LTS release—Ubuntu 16.04—arrives in 2016. And at first glance, it might seem like a bad thing. After all, Mint is missing out on whatever new stuff is in Ubuntu 14.10 (in this case it's not much, but 15.04 will have plenty of changes). However, Mint 17.1 is in fact a very good sign for fans of the distro's own tools, like its homegrown Cinnamon desktop. By relying on a consistent LTS release, Mint developers can more or less ignore the base system. Instead of spending all their time and effort making sure whatever Ubuntu has changed works with Mint, they can focus on what makes the ecosystem great—namely, its two primary desktops, MATE and Cinnamon.

Linux Mint 17.1—a new leaf

While most of what's new in Mint 17.1 will be seen in the updated desktops, there are some common components to both Cinnamon and MATE. While accessing some of these new tools varies slightly by desktop, the results are the

same in both. Right away, you'll notice the login screen is among these new and improved elements.

If you start the Mint installation process and walk away, you'll likely come back to an image slideshow that's slowly flipping through all the various wallpapers that Mint 17.1 offers. The choices are vast, since Mint 17.1 contains not only wallpapers that are new with this release but all the options that came with every previous Mint release. Suffice it to say that if you need an aesthetic desktop refresh, Mint 17.1 has you covered.

Enlarge / The new Mint 17.1 login screen, complete with slideshow controls.

The slideshow is a nice touch, and you can control how it behaves with the Login Window Preferences menu. This menu now has Theme, Auto Login, and Options items to access different settings. There's also a theme preview button to test out other available choices (or any options you install yourself).

While the newly polished login screen is nice, a far more useful change comes in the form of a revamped Update Manager. Mint has been refining this for some time now. The last release saw the introduction of some new icons and a numbered rating system that lets you know which updates are essential and which can be safely ignored. Mint 17.1 builds on those improvements with a new feature that groups package updates together based on source package.

That is, rather than just list every new package that's going to be updated, Mint 17.1 will group everything you need to update in a single package—say, LibreOffice—into one line in the Update Manager. Select the update and you can see the individual packages listed in the bottom pane. If you want more information on what's new, there's a Changelog tab that will download details on what's new in that package.

Enlarge / Mint 17.1's Update Manager.

The new grouping system will help users avoid selectively updating packages and potentially breaking the whole because not every necessary part is up to date. Mint's lead developer Clement Lefebvre described how it used to be on the distro's site: "When a developer fixes a bug or writes new features, the source code is modified and all packages which are related to it become available under a new version... it is therefore futile and sometimes dangerous to apply some package updates and not others within the same source package." But because Mint 17.1 groups updates, you'll never apply something incomplete. It's now considerably easier to review exactly what's being updated in each source package because everything is shown together in one place.

Among other notable tweaks, the Update Manager in Linux Mint 17.1 features a redesigned kernels menu that makes it easier to see security updates and any regressions in each kernel update. Linux Mint 17.1 also ships with a new font, Google's Noto font, which is Google's attempt to create a font family that supports all the world's languages. And while the trademark minty green is still the default, Mint's theme gets quite an overhaul in this release. Those that don't like the default green can banish it in favor of quite a few new colors, and there are a number of dark-on-light theme options available if the default light-on-dark interface isn't what you want.

Viewing various installed kernels in Mint 17.1's Update Manager.

As noted previously, this release sticks with the Ubuntu 14.04 base, meaning the kernel is v3.13. That's a little behind what most distros released in the last couple of months are using. If you're already running Mint 17 without issues, then you'll likely be fine with 3.13. The main issue you may run into is if you have any brand new hardware that requires a newer kernel for full support.

On the other hand, one bit of hardware that does get some love in this release is the single-button trackpad (like, for example, those used in Apple laptops). If you're planning to run Mint on a Macbook of some kind, this release is a must-have. Be sure to check out the new Mouse and Touchpad panel in the System Settings, which now allows you to configure which actions apply to two-finger and three-finger clicks (by default it's right and middle click, respectively). Cinnamon is Mint's homegrown flagship desktop. If you're not interested in new approaches to the desktop like those being pioneered by Ubuntu's Unity or GNOME 3's Shell interface, Cinnamon offers a more traditional interface based on familiar ideas like a task bar and main menu. Cinnamon is not breaking any new ground on the UI front, but it's polished, fast, and reliable.

We've been using Cinnamon nearly full time for quite a few releases now. When it first arrived, it was the desktop you knew had potential, but it was buggy enough to create a bash alias to restart things after a crash. Thankfully those days are long gone, and Cinnamon has been rock solid in use ever since Mint 15.

For Mint 17.1, Cinnamon has been updated to version 2.4. This release focuses on reducing memory use and speeding things up. While Cinnamon will never be as lightweight as something like LXDE or Openbox, Cinnamon 2.4 is considerably snappier than its predecessor, even on underpowered hardware like my aging Asus EeePC 1005.

When you install the Cinnamon version of Mint 17.1, once you get past the slideshow login screen you'll be greeted with yet another new animation—a GNOME-inspired desktop zoom that gives the Cinnamon boot experience a more polished feel. It's a small thing, but it sets the tone quite nicely for Cinnamon 2.4. The Cinnamon interface remains light-on-dark by default, but as noted earlier, there are numerous new theme options and colors to customize things to your liking (most GTK 2 and 3 themes should work as well).

Among the more visual changes in this release are a slew of new features in Nemo, Cinnamon's file manager. The latest version of Nemo adds support for colored folders, new ways to customize the sidebar, and what Mint calls "emblems."

Enlarge / Adding color and emblems to the Documents folder.

The emblems are little sub-icons that are displayed on top of the base icon—for example, the musical note emblem overlays the Music folder by default. You can now apply any emblem to any folder or file. The emblems make it a little easier to find the folder or file you're looking for in the sidebar or list views (as do the new colored folder options). The emblems and colors would be even better if they showed up in open/save dialogs in other apps, but unfortunately they do not.

Nemo's toolbar has been redesigned, and its buttons are now configurable. For example, there's an especially handy button that will open a terminal window in the current directory. It's not there by default, but you can enable it under Edit > Preferences.

Enlarge / Customizing Nemo's toolbar.

The Cinnamon settings panel has been revamped for this release, with panes now displayed in alphabetical order within each section. There are also a couple of new panes, including one for controlling notifications. The Privacy pane is particularly of note, as it's based on the same tool in GNOME 3 and allows you to control how long recent items are stored.

Other improvements in Cinnamon 2.4 include support for multiple panel launchers, improvements in the sound applet, and the usual slew of bug fixes that come with any major update. Between the new features, themes, added polish, and speed improvements, Cinnamon 2.4 feels (to at least one Linux enthusiast) like simply the best desktop to use on any OS, including Windows and OS X.

Linux Mint 17.1 MATE desktop

The MATE desktop began life as a fork of GNOME 2, a response to GNOME 3's radical departure from GNOME 2. Since then, MATE has gone on to become very much its own thing.

That's not to say that the latest, MATE 1.8, has strayed too far from its GNOME 2 roots. This release is still aimed at GNOME 2 fans and those looking for a lightweight but full-featured desktop. In fact, those GNOME roots are strengthened in this release with the addition of Compiz support. Yes, it's true, MATE and Compiz can be joined for a return to the halcyon days of rotating cubes and wobbly windows.

Enlarge / Compiz and MATE, together at last.

To keep MATE true to its lightweight past, Compiz is not enabled out of the box, but turning it on is just a matter of opening Desktop Settings > Windows and switching from the default Marco window manager to Compiz. MATE will warn you that Compiz's Settings Manager is a powerful tool capable of rendering your desktop unusable, but once you ignore that, you'll be able to tweak and break Compiz just like you did when Ubuntu 8.10 was the best thing in Linux.

Enlarge / Compiz and MATE... you've been warned.

That said, we would not recommend using Compiz with MATE. We found the Compiz support to be a bit buggy, and of course Compiz requires more powerful hardware, which negates part of the appeal of MATE. If you want more bang for your desktop buck, go with Cinnamon. That is, unless you really love rotating cubes and wobbly windows. In that case, perhaps you'll have better luck.

The Mint-X theme options mentioned earlier give you a few new ways to customize MATE, and the new font provides better support for some languages (CJK in particular). Under the hood, this iteration comes with some bug fixes and stability improvements as well.

If you pine for the days of GNOME 2, complete with Compiz wobbly windows and the rest of the desktop effects that once said "this is a Linux desktop," then MATE 2 fits the bill. If you prefer a lightweight desktop that just stays simple and out of the way, MATE is still a great choice... just stick with the default Marco window manager.

Mint 17.1 software stack

When Mint first announced its intention to stick with an Ubuntu 14.04 base for a few years, many users were concerned about what that would mean for application updates. As noted, the kernel is not as up to date as what you'll find in the latest version of Ubuntu, openSUSE, or the upcoming Fedora 21.

On the application front, though, things are looking much better. Mint continues to ship with just about everything you need for all-around desktop use, and it even includes some useful apps often left out of other distros by default (like GIMP and VLC). Note, however, that this does make the Mint DVD a little on the large size (1.4GB for the Cinnamon DVD).

Both the Cinnamon and MATE versions of Mint 17.1 ship with the latest stable versions of all its included apps: Firefox, LibreOffice, Banshee, VLC and other common applications. Apparently Mint can keep its base system and eat its application updates, too.

Small, but upgraded for a reason

Mint 17.1 is well worth the upgrade, though as Lefebvre writes in a post on how to upgrade from Mint 17, you should

"upgrade for a reason."

"As excited as we are about 17.1, upgrading blindly for the sake of running the latest version does not make much sense, especially if you're already happy with 17 and everything is working perfectly," the post says.

That refreshing bit of pragmatism is worth keeping in mind regardless of which distro or desktop you use. But again, we had no trouble at all upgrading from Mint 17—everything is once again working perfectly. All you need to do is open Update Manager and head to the Edit menu, where you should see an option to "upgrade to Linux Mint 17.1 Rebecca."

The only problem we've encountered so far in use is the known bug involving problems with Skype on 64-bit versions of Mint 17.1. Fortunately, there's already an easy fix.

Linux Mint 17.1 will receive security updates until 2019, and until 2016, all Mint releases will continue to use the same base package system, AKA Ubuntu 14.04. So far, abandoning the newest base for an LTS option looks promising. Moving from 17 to 17.1 has proved painless, which means that upgrading to 17.2 and beyond should be more of the (delightful) same.

Android games catching up to iOS games (2015-06-14 10:09)

Global consumer spending rose 50 per cent on Android in the first calendar quarter, comfortably outpacing the 30 per cent growth on iOS.

The gap in total spending may still be very much in favour of iOS, but Android has made up significant ground since Q1 2014. Android's share of the hardware market also grew by 4 per cent in the last year, finishing Q1 2015 with nearly 75 per cent of the global installed base.

And multiplayer games are a driving force behind that increase in spending, with 6 of the top 10 games in Q1 2015 allowing group or team play. Among the top 50 games in the quarter, 60 per cent of all consumer spending was generated by multiplayer titles, even though they only accounted for 30 per cent of downloads. In both cases, that majority share has increased significantly since Q1 last year.

App Annie also nodded to Steam as proof of the benefits of multiplayer games, not just in terms of revenue, but in

their stickiness and the levels of user engagement they inspire. In May 2015, 88 per cent of the peak concurrent daily users for Steam's top 50 games went to multiplayer titles.

The Apple Design Award-winning Vainglory is an example of these trends playing out in mobile. Super Evil Megacorp's target audience was core gamers like those playing League of Legends and Dota 2 on Steam, who haven't yet embraced mobile hardware as a primary gaming platform.

Speaking to GamesIndustry.biz last year, CEO Bob Daly said that the imminent transition of core gamers from PC and console to mobile and tablet will be, "the next big sea-change in terms of the industry," and, "potentially larger than anything that we've seen in games in a while."

"Right now they see consoles and PCs as their primary gaming platforms and they're also playing on mobile and tablet," added COO Kristian Segerstrale. "Increasingly tablets are outselling PCs, and people are shifting from PCs to tablets, there is an incredible opportunity to create games that ultimately will convince core gamers that these are worthwhile primary gaming platforms."

Electronic Entertainment Expo: Nintendo's losing. (2015-06-21 23:40)

You know a company has had a particularly miserable E3 when, before the show is even over, one senior executive finds himself having to officially deny that another senior executive has apologised for the state of their E3 offerings. That's exactly the situation Reggie Fils-Aime found himself in earlier this week, as the disappointment at Nintendo's extremely weak showing crystallised around a single tweet sent by company president Satoru Iwata. The tweet was in Japanese; various translations floated around, some more accurate than others, and the media gleefully seized on an interpretation which had Iwata promising to "do better" at E3 in future. It was the perfect stick with which to beat Nintendo for failing to live up to the standards accomplished by Microsoft and, even more spectacularly, by Sony on the previous day; look, even the company's own president thinks it was rubbish!

As it happens, Fils-Aime is quite right; Iwata did not apologise for Nintendo's conference. He said that the company was listening closely to feedback and would work hard, in future, to meet the expectations of even more people. This was prefaced with a comment related to the extremely late hour at which the show was broadcast in Japan (it didn't start until 1am JST; the Sony conference the previous day was at a rather more comfortable 10am JST, and nobody in Japan really cares about the Microsoft conference). In context (and context is king in the Japanese language), Iwata's

comment is clearly a generic "thanks for your feedback, we'll work hard in future too", coupled with a tacit promise to try not to mess up the scheduling for Japanese viewers in future.

"Nintendo said 'we're not playing the E3 game' and attempted to dodge the inevitably negative contrasts with Sony and Microsoft... It didn't work"

Iwata didn't apologise. Of course he bloody didn't; the Nintendo boss is often frank and refreshingly direct in his manner, but the content of his statements is always, always on-message. The idea that he was going to take to Twitter to say "sorry, that was a load of old bollocks wasn't it?" after his company's event is ludicrous. Yet, at the same time, the fact that it seemed plausible to so many people is a reflection of something troubling; Nintendo's event was genuinely bad enough to make an apology from Iwata himself seem, if not realistic, then at least not ridiculous.

Nintendo, or at least a part of Nintendo - perhaps the Japanese part - didn't want to be at E3. That's partially related to NX; the company is the only platform holder which has acknowledged that it's working on future hardware, but isn't going to say anything further about it until 2016. It's also too early to talk about its mobile titles (and E3 probably isn't the venue for that anyway), and Iwata confirmed prior to the event that it wouldn't talk about its health, lifestyle and education related projects at a purely gaming event like E3. Nonetheless, there's plenty that Nintendo could have talked about but didn't. The choice to reveal only games that are locked in for release within the next 10 months or so isn't confirmation of a time-of-death being decided for Wii U (they did the same thing for 3DS, which has an installed base twice the size of the PS4 and isn't going anywhere any time soon), it's a decision which was taken, along with the decision to do an online broadcast rather than a live event - cutting out the whooping crowds and the spectacle that usually defines an E3 conference.

These are decisions which say, "we're not playing your game" - the game in question being E3 itself. Nintendo doesn't feel like it fits well with E3 right now. It's not just troubled by the dismal sales of the Wii U, it's also deeply uncomfortable with being the only major company in the industry that's still seriously committed to family entertainment. It knows that no matter how wonderful its software and franchises are - and I maintain that Nintendo is in a genuine golden age regarding the quality of its games - they make problematic bedfellows for the mainstream of distinctly adult-focused games and the monetisation of violent nostalgia for thirty-somethings. I think it's genuinely wonderful that the games industry's wings are spread so wide, even in the AAA space, that it can accommodate both the charming, gentle fun of Yoshi's Woolly World and the gut-wrenching, visceral violence of the Doom reboot; at the same time, I can understand why the creators of the former don't see much value in investing heavily in promoting it alongside the latter. Wrong place, wrong time, wrong audience. It's no accident that one of the very few third-party games to appear in the Nintendo event was Skylanders, a hugely successful franchise that's equally uncomfortable standing shoulder to shoulder with Call of Duty and Assassin's Creed.

By going digital rather than having a staged event, by replacing its executives with loveable puppets, by giving developers lengthy, meandering videos to chat about their creative process after showing off their new trailers, by refusing to talk about anything but the immediate future of its software line-up - by all these decisions and more, Nintendo said "we're not playing the E3 game" and attempted to dodge the inevitably negative contrasts with Sony and Microsoft.

It didn't work. It didn't work because it's an intrinsically dishonest approach, one which not only failed to establish a "Nintendo difference" that denied negative contrasts, but which also robbed the company of the chance to make a decent fist out of its showing. Nintendo hobbled its own event, making it even more disappointing than it needed to be, and all it achieved was to make itself look even weaker, even more troubled, next to the might of Sony and Microsoft.

Here's what Nintendo should have done - should have had the courage to do - nothing. They should have held no digital event. Some of Nintendo of America's activities, like the entertaining and light-hearted Nintendo World Championships, fit nicely with the week, but the digital event shouldn't have happened at all. The company is absolutely correct to think that its approach and its products don't fit E3 as it stands, but absolutely wrong to think that it can avoid the resulting negativity by just downscaling its involvement. Pick a lane and stick with it; given the

choice to go big or go home, Nintendo's decision ought to have been "go home", not "can't we just go a bit small and hope for the best?"

"It failed so miserably that the Internet spent a few hours genuinely believing that Iwata had apologised for the whole sorry affair"

This would not be unprecedented. Faced with a similar disconnect between their games and much of the rest of the industry's direction, Nintendo - by far the largest games company in Japan - has spurned involvement in the Tokyo Game Show for many, many years. Being at TGS makes no sense for the company. It can achieve better exposure for its games in a more positive environment by holding its own event, digital or otherwise, at a different time; a month or two before the show, or after the show. This decision has never hurt Nintendo one jot - not in the way that a rubbish, half-hearted TGS conference every year would have.

Precisely the same logic applies to E3. Imagine if Nintendo had skipped E3 entirely; sure, there would have been a bit of hand-wringing and pearl-clutching in the media over it, but it would have been over soon, and a few people writing "Nintendo were conspicuous by their absence" in their show reports is hardly the end of the world. Then this week's digital event could have been held as an ordinary digital event a month or six weeks later; call it "Nintendo's preview of the next six months", or whatever. In that context, it would actually have been a pretty great show. Tack on a few seconds of new footage from the upcoming open-world Zelda game and one of Miyamoto's work-in-progress Gamepad titles, and you'd have a digital event that everyone would consider pretty strong, instead of an E3 show that everyone considered awful and weak.

To make this work, though, Nintendo needs to commit to the strategy. This year, it tried to have its cake and eat it; to participate in E3 without committing to it, without making a big deal of it. It failed so miserably that the Internet spent a few hours genuinely believing that Iwata had apologised for the whole sorry affair. Skipping E3 entirely - or at the very least, dropping all pretence of holding a conference during E3 week - would have been preferable, and ought to be the company's strategy for the future.

Still in war, very lethal world, yet Gay Marriage sounds justified to the government (2015-06-28 15:40)

The President should be impeached, because the judicial branch cannot make laws. Only Congress can make laws. This is tyranny, because Like Marxism-Leninism (New Party, Committees of Correspondance for Democracy and Socialism, the Democratic Party wants an atheist state so the executive branch and judicial branch cannot make laws, but do so regardless.

Now, Muslims, on the other hand ...

The dhimmi left largely refuses to mention it, so I will. Homosexuals are, right now, actually being "lawfully executed" in Iran and other Muslim nations across the globe. To my fellow followers of Christ, I say this: They need our fervent prayers, deepest sympathies and unconditional support. Not in affirmation of their sexual sin, which the homosexual lifestyle remains, but because they are victims of Islam - because they are deeply loved by their Creator, Christ Jesus, who wants desperately for them to repent, accept Him and believe upon His Holy Name.

It's a strange dichotomy. "Progressive" propaganda notwithstanding, and absent the rare anecdotal exception, homosexuals are decidedly not being persecuted in the West. In fact, homosexual activists wield unparalleled political power in both Europe and North America. This power, and its universal abuse, is on display for all to see. Truth be told, if someone, anyone other than a Muslim that is, even looks sideways at a homosexual, it becomes a liberal cause célèbre. It's front-page news.

Indeed, the self-styled arbiters of "tolerance" and "diversity" are the most intolerant and monolithic among us. Their anti-Christian bigotry is well documented. Homosexual activists are frequently the crème de la crème of these left-wing extremist goose-steppers. Their hatred and intimidation of any who dare disagree are especially nasty.

By contrast, in the West it is Christians and conservatives who are discriminated against, bullied, hated, publicly

mocked, fired from jobs and even threatened with jail time for acknowledging God's natural design and moral mandate for human sexuality. It's tyranny of the minority, and it's reaching unprecedented heights.

Still, in Muslim nations both Christians and homosexuals are persecuted. That's Islam. Each are systemically jailed, tortured and even executed. Curiously, it's the same cowardly leftists who disingenuously accuse Christians of "anti-gay hate" at home who remain silent while homosexuals are, in point of fact, tortured to death by Muslims abroad. Now that is hate.

Both this silence, and the burgeoning anti-Christian persecution by "progressives" in the West, is due, in part, to the fact that orthodox Christians, who are Spiritually imbued with the love of Christ, are perceived as soft targets, while orthodox Muslims, who are spiritually imbued with the hate of Muhammad, are not.

In other words, bullies steer clear from picking fights with bigger bullies.

But it's also because Christ is Truth. Truth is the enemy of "progressivism," just as Truth is the enemy of Islam. They each derive from an antichrist spirit.

Even so, Muslims in the Middle East missed the "Hey-we're-on-the-same-side-here!" memo. While politically correct "progressives" will trip over themselves to avoid criticizing Islam and, with perplexing incongruity, even promote it, adherents to "the religion of peace" will gleefully murder them while they do so.

Islamic apologist and suspected Muslim Barack Hussein Obama is exhibit "A." If Islamists blew up the White House and the Pentagon (my bad, they already nailed the Pentagon), he'd blame it on the Christian Crusades, the Inquisition and "right-wing extremists."

No, really, he would.

A few years back, homosexual columnist Andrew Sullivan declared Barack Obama to be "the first gay president." While this was intended to be a compliment, meaning that Obama had fully embraced and unilaterally implemented the political demands of "LGBT" pressure groups, it turned out to be a premature accolade. Consider the indisputable fact that our "gay president's" BFFs in Iran summarily execute those they suspect of practicing homosexuality. Whether they catch you cold in the bathhouse, or you simply walk with a wisp and speak with a lisp, if they even suspect you're a homosexual, the Iranian government will publicly hang you as a matter of official government policy. These are the evil tyrants with whom our own evil tyrant chooses to play footsie – the Islamic terrorists he intends to arm with nuclear weapons.

Pick a side, Barry. Is it the "gays" or the Muslims? You can't swing both ways on this one.

Recently, CNN reported similar details on the Islamic State. ISIS is now executing suspected homosexuals with even greater fanfare:

"Three men on top of a building, faces covered in black balaclavas, stand on either side of their victim, while a fourth seems to be taking a photo or video.

"Their victim is thrown off the building. In the last photograph, he is seen face down, surrounded by a small crowd of men, most carrying weapons, some with rocks in their hands. The caption reads 'stoned to death.'

"The victim brutally killed because he was accused of being gay."

This weekend I am honored to once again share the stage with the who's who of America's Christian leadership at The Awakening 2015 Prayer and Patriotism event in Orlando Florida. Among the featured speakers is the Rev. Franklin Graham. In recent years, Rev. Graham has emerged as one of the Christian world's foremost defenders against threats posed by both radical Islam and radical "progressivism." He's also a loving defender of the self-described "LGBT community." I say defender, because, rather than enabling them in their self-destructive, sin-centered lifestyle, he fearlessly shares with them the truth of where that lifestyle will inevitably lead and to whom, exclusively, they can and must turn to escape its spiritual dead end.

"A recent news report shows Islamists throwing gays off rooftops and then stoning them when they hit the ground," Graham recently posted on Facebook. "Does this sound like a peaceful religion to you, as the president has said?"

While refusing to waiver on the biblical truth that homosexual behavior is sin, Graham went on to share the hope found in Christ alone.

"I love gay and lesbian people," he wrote, "and I want them to know that God loves them too, and He is willing and eager to forgive sin – all sin – however, we must repent and turn from our sin and believe on the Name of the Lord Jesus Christ."

Amen, Rev. Graham. This is our prayer for homosexuals, the Muslims who kill them and every other living soul on

earth.

17.7 July

Bought Suikoden II, Marvel vs. Capcom II, and Haunting Grounds (2015-07-02 22:49)

great jrpg for ps1. I would have bought it 5 years ago, but waited far too long.

Haunting Grounds is an average horror survival

I played Marvel vs. Capcom 2 on Sega Dreamcast during 2001 now on my old Playstation 3. Dreamcast was 2 years of my life. The best of the 32-bit 2D fighting games. Had a chance to pick it up in high school, but waited too long.

PCSX2 full speed is an absolute blast. (2015-07-06 21:32)

I can play 100 % of my PS1 and PS2 games on PC with a Dual Shock 3 or Sixaxis. Games work at 60 fps and are fully playable. I checked this emulator out in 2008, but now it works 60 fps on older hardware. PCSX2 also uses the Radeon's anti-aliasing. This should save my ps2 a bit longer. I have JRPGs and other games. I needed to burn the isos. I wonder how long it takes until PCSX3 PS3 emulator is out. This is added to my huge Rom collection. I used to play Sega Saturn games on the SSF emulator.

New Xbox 360 emulator for Xbox One (2015-07-07 15:00)

I also remembered the xbox 360 had a xbox emulator.

Millions of people made investments in 360 content," he said. "We thought the right thing to do was to make that content go forward, but we didn't know [how difficult it would be]."

"[Emulation] is hard," admitted Spencer, explaining that the company was dealing with having to harmonise PowerPC architecture with x86.

"The approach that we've taken is to actually emulate the full Xbox 360 hardware layer. So the [operating system] for the 360 is actually running when you run the game," Spencer explained.

"If you watch the game's boot you'll see the Xbox 360 boot animation come up. From a performance standpoint it allows [emulation] to work. We're able to get frame by frame performance equivalents."

"[Xbox Live] thinks you're on a 360, so people have been asking 'hey, why are you playing Mass Effect on the 360?,' I was actually playing on the Xbox One."

Spencer continued to explain that, since the Xbox One thinks it's playing a normal game, features such as streaming and screenshots are supported.

"The 360 games think they're running on the 360 OS, which they are. And the 360 OS thinks its running on the hardware, which it's not, it's running on an emulated VM. On the other side, the Xbox One thinks it's a game. That's why things like streaming, game DVR, and screenshots all work, because it thinks there's just one big game called 360."

Delving deeper, Spencer explained exactly how the emulator packages the Xbox 360 games, and how it compares to Xbox 360's emulation of original Xbox games.

"You download a kind of manifest of wrapper for the 360 game, so we can say 'hey, this is actually Banjo, or this is Mass Effect. The emulator runs exactly the same for all the games.

"I was around when we did the original Xbox [backwards compatibility] for Xbox 360

where we had a shim for every game and it just didn't scale very well. This is actually the same emulator running for all of the games. Different games do different things, as we're rolling them out we'll say 'oh maybe we have to tweak the emulator.' But in the end, the emulator is emulating the 360, so it's for everybody."

Asked about whether Microsoft would require permission from game publishers to adjust game code, Spencer clarified it would not be interfering with code.

"The bits are not touched," he said. "There's some caveats, and as always I like to be as transparent as I can be on this: Kinect games won't work from the 360, because translating between the Kinect sensors is almost impossible."

Finally, the subject of multi-disc games was also addressed. According to Spencer, it's an issue engineers are looking into.

"We're still working on multi-disc," he said. "Lost Odyssey and Blue Dragon are some of my favourites from the 360. There's actually work in packing a multi-disc into single that requires us to go back and look at the original package on the multiple discs and reconfigure that."

Microsoft announced Xbox One backwards compatibility with Xbox 360 games at its E3 press conference. According to the platform holder digital Xbox 360 titles already purchased via XBLA, as well as retail discs of last-gen titles, will eventually be "natively" playable on Xbox One.

Bought Mac Pro and Macbook Pro (2015-07-21 16:18)

- 2x Intel Xeon 'Harpertown' Quad-Core 2.8Ghz Processors (8-Cores)
- 16GB (8x 2GB) DDR2 ECC Memory - 1TB 7,200-rpm Hard Drive
- Nvidia Quadro Fx4500
512MB Graphics Card w/ 2x DVI Output
- Blu etooth, Superdrive
-
-

- I also bought a Macbook pro that runs Adobe photoshop CS.
-
-
- Also bought a Macbook pro
 - 2.4 GHz Quad-Core Intel Core i7 Processor
 - 4 GB 1333MHz DDR3 SDRAM
 - 750GB 5400rpm Hard Drive; 8x DVD/CD SuperDrive
 - 15.4-Inch LED-backlit Display, 1440-by-900 Native Resolution; AMD Radeon HD 6770M with 1GB GDDR5
 - Mac OS X v10.7 Lion, 7 Hour Battery Life
 - Adobe lightroom 5.7
 - Libreoffice 4.4.4
 - adobe lightroom 5.7

Inhuman Best Buy (2015-07-24 08:53)

Pros could have have good salary for education, flexible work hours, fast paced environment, plenty of learning experiences, frequent team-building exercises and events. Cons Another con is Best Buy would exploit my knowledge

without just compensation, hired me for one job but gave me the bait-and-switch for a part-time job, and absolutely no advancement opportunities in 3 years. Regularly took me away from my job to help other departments and reprimanded me when my job couldn't be done. A corporate electronics store that doesn't care what electronics you buy, as long as you buy "extras" with it. No one in the company besides from the CEO's and the Investors have any kind of degree after high school, or if they do they won't stay there long because they can't stand all the bullshit propaganda. A bunch of idiots in yellow shirts trying to sell you overpriced goods they know nothing about. You are classified as an "angel" or a "demon" based upon how much of your money the store is able to capture. Once you've bought the product, god help you if you need to return it because there is a 15 % restocking fee. Advice to Management The management can't listen to employees, because Best buy is going bankrupt. I tried every approach to improve the system, but nobody took me seriously. Instead of letting me teach the other departments how to improve themselves, they would want me to do both jobs, and when one failed I would be blamed. This isn't management, this is scat-throwing. If there's a problem you aren't addressing, and people aren't allowed to help, you're killing morale and teamwork. All precursors that Best Buy will eventually go bankrupt. Scat throwing is the main reason I don't work at Best Buy. 1. Growth is going the wrong way. Stocks that more than triple in a year are often on a growth tear, but that's certainly not the case with Best Buy. Analysts see revenue and earnings per share declining 7 percent and 13 percent in the fiscal year that ends later this month. Best Buy started to bounce back when it became clear that the superstore chain wasn't going away. However, fundamentally speaking it has just now started to bottom out. 2. Consumer electronics may never be the same. Best Buy may be selling a fair number of smartphones and tablets, but what happens after that? Unlike the PCs, TVs and CD players that used to define Best Buy's business a few years ago with a steady diet of software discs, DVDs and CDs, today's hot devices feed into digital ecosystems that bypass Best Buy completely. We're already seeing the cracks. Smaller rival HHGregg (HGG) spooked the market earlier this month by announcing preliminary holiday results showing a 19.7 percent decrease in consumer electronics sales and a steeper 24.5 percent slide in computing and wireless products. Best Buy likely held up better than that, but it's still a trend that doesn't bode well for the retailers of consumer electronics and physical media items. 3. This is no longer a juicy dividend play. Best Buy's quarterly payout of 17 cents a share was a major attraction when the stock closed out 2012 at \$11.85. It was a fat 5.7 percent yield, making it a compelling stock for income investors betting on the chain's survival. The quarterly dividend remains the same, but with the stock closing out 2013 at \$39.88 the yield for new investors drops all the way down to 1.7 percent. When you consider that interest rates inched higher through 2013 it makes Best Buy less attractive. 4. Best Buy is no longer cheap. The days of Best Buy trading at an earnings multiple in the mid-single digits are toast. The stock kicked off 2014 fetching 16 times this fiscal year's projected profitability and 14 times the profit target for the new fiscal year that begins next month. That's not an outrageous multiple, but it's not as if Best Buy is growing its sales again. Wall Street is braced for flat revenue growth in the year ahead, and since that follows a double-digit decline over the past year we're talking about a chain that still won't be where it was two years ago in terms of total sales. 5. Sector rotation cuts both ways. Investors poured into consumer electronics retailers early last year. It wasn't just Best Buy. Conn's (CONN) more than doubled, and HHGregg nearly doubled in 2013.

Top 100 videogames 2015 edition (2015-07-26 12:06)

·-

100. Worms Armageddon (1999). The feeling inspired most intensely by *Worms Armageddon*, oddly but irresistibly, is helplessness—the sensation that, as a friend locks you in the sights of a bazooka, you can't do anything about it. Chaos reigns: Grenades remain in thrall to the mercurial whims of the wind, ping-pong wildly, as you seize up waiting to see that last, unpredictable bounce. These are death matches in which you're about as likely to shoot your enemy as you are to shoot yourself, though with mechanics so precisely engineered that the only blame for your mistakes belongs to yourself. It was maddening. But futility proved fun. *Marsh*

99. Phantasy Star IV: The End of the Millennium (1995). *Phantasy Star* has its fans, a great many of whom jumped on when the series went MMO, but it's never been a franchise uttered in the same breath as Square Enix's best and *Phantasy Star IV: The End of the Millennium* releasing hot on the heels of *Final Fantasy VI* didn't help. The irony is that Sega's magnum RPG opus does pretty much everything *Final Fantasy* would offer in the years that followed way ahead of the curve: combo spells, manga-inspired cutscenes, space travel, multiple vehicles to play around in, and the best, delightfully earnest storytelling the genre has to offer. This is the system's quietly ignored masterpiece. *Justin Clark*

98. Phoenix Wright: Ace Attorney (2005). The genius of *Phoenix Wright: Ace Attorney* is derived from a single word: "Objection." The game imbued that modest exclamation with the power to make or break a legal case entire, invoked like a coup de grace to bring a 10-hour mystery to its final, satisfying close. A handheld judicial comedy composed largely of text and 2D animation, *Phoenix Wright* is clearly a video game apart, beloved as much for its formal audacity as for its almost novelistic density as a work of detective fiction. Gather clues. Build a case. And prepare for a culminating moment of glory: a chance to yell "Objection!" Marsh

97. Wild Arms (1996). Back in the olde days of the PlayStation, developers seemed a lot more willing to make reckless gambles, but it led to brilliant oddball titles like *Wild Arms*, which combined western themes with science-fiction machinations. The game freewheeled it from the start, allowing players to choose the order in which they'd play through the initial three scenarios, and never looked back. By settling on a small cast (going up against some very large stakes), the game allowed for a depth of character development that was missed in other, more well-known titles, to the extent that even swapping between heroes (each had their own set of puzzle-solving tools) felt like

reacquainting oneself with an old friend. Whether playing a guitar to summon a monstrous golem or using the power glove to disrupt a satellite's transmission, they just don't make bizarre, wild games like this anymore. *Aaron Riccio*

96. Pokémon Gold and Silver (2000). Superior in almost every way to their predecessors, *Pokémon Gold and Silver* introduced a number of significant advancements that have since become staples in modern *Pokémon* installments. The real-time clock system, which allowed for certain Pokémon to make their appearances at specific hours of the day, was a landmark element that had gamers waking up in the dead of the night to acquire rare critters. Pokémon item-holding, berries, the Pokégear, defeated trainer rematches, shiny Pokémon, breeding, and the Dark and Steel types were also first seen in *Gold and Silver*. To boot, *Gold and Silver* arguably boast the best starting trio, protagonist, and expansion edition (*Pokémon Crystal*) this fabled franchise has yet to deliver. *Mike LeChevallier*

95. Dead Space (2008). *Resident Evil 4* in space, or a video-game version of *Event Horizon*. That's *Dead Space* in a nutshell, but that also doesn't do the game's fierce commitment to the horror element of survival horror nearly enough justice. This is a game not above setting up creatures to jump from behind vents and corners, or leaving the

player low on ammo, but it's in watching the Artifact drive the USG Ishimura's crew into violent insanity, the game's Kubrickian use of the cold silence and zero gravity of space, and the dozens of visceral ways Isaac Clarke can die that raise this game far above its lackluster peers. *Clark*

94. *Advance Wars: Dual Strike* (2005). The most appealing feature of *Advance Wars: Dual Strike* is also its most superfluous: Those gloriously, singularly animated battle sequences, which hurl your tiny armies into split-screen combat for a two-second rapid-fire skirmish. It's an entirely unnecessary design element—a quirky bit of ornamentation that visualizes the damage calculations chattering away behind the scenes. And yet it's precisely what elevates the game from distinguished real-time strategy to something altogether new. Precisely calibrated mechanics are a solid foundation. *Advance Wars* delivers something more: a burst of aesthetic splendor and an inspired flourish of design. *Marsh*

93. *Teenage Mutant Ninja Turtles: Turtles in Time* (1992). In its halcyon days, the side-scrolling beam-'em-up genre produced a number of standout games that could have easily landed on this list, but Konami's *Teenage Mutant Ninja*

Turtles: Turtles in Time stands as the king of its kind for a variety of reasons. It effortlessly defined the comic book-reading, pizza-eating, cartoon-watching, slang-spouting, arcade-inhabiting zeitgeist by using the then mega-popular *Teenage Mutant Ninja Turtles* as a faceplate for what's perhaps one of the most addicting cooperative multiplayer experiences in video-game history. Teaming up with three friends as the titular reptilian foursome and mowing down waves of Foot Soldiers and various mutated hostiles, all set to composer Kôzô Nakamura's consummate 16-bit score, is a riotous routine that never stales. *LeChevallier*

92. *Fallout 3* (2008). The idea of walking around a nuclear wasteland in 2077 is as much of a fantasy as anything else in a modern role-playing games, but the attention to details lavished by Bethesda upon their devastated, mutant-overrun version of Washington D.C. made *Fallout 3* feel all too real. That's because the game allowed you to literally choose your own adventure. Because if you didn't feel like exploring the various ruined landmarks, subways, and museums that loosely connected the main plot, you could simply scavenge the surrounding, fully rendered areas, stumbling over old military bunkers and warehouses in the mountains, or picking through suburban homes, supplying your own grim stories and making your own brand of morality. *Riccio*

91. *Halo: Combat Evolved* (2001). *Halo* is about an intergalactic war between humans and aliens, interrupted with the discovery of an ancient, sinister planet-sized artifact: an enormous ringworld, with continents and oceans like Earth, that stretches into an enormous loop. One can see everything continuing way off into the distance, then look up to the sky to see the ring reach up into the heavens. This dazzling vision defied the limits of previous first-person shooters, set across uniquely huge landscapes that could be freely traversed, and utilized vehicles as well as firearms, both for travel and as armaments. Its addictive gameplay is accentuated by its intriguing sci-fi narrative, wherein the player's interaction with the technology of an ancient species inadvertently instigates the end of all life. *Ryan Aston*

90. *Saints Row: The Third* (2011). You're the leader of a gang of ninjas dressed in an enormous pink cat suit, driving your monster truck over pedestrians as you flee from a gang of Mexican Luchadore wrestlers. Soon you'll be flying overhead your bright pink helicopter, shooting them with a rocket launcher that discharges sharks. Dispensing completely with any notion of serious tone or narrative, *Saint's Row: The Third* embraces maximum lunacy to create one of the more ridiculous, hilarious, and insane player experiences ever offered by a video game. The open-world game to end all open-world games, it offers players a dynamic sandbox within which to cause havoc as the head of a fully customizable gang of crazies armed with the most creative implements of destruction conceivable. *Aston*

89. *Valkyrie Profile* (2000). More than a mere inoculation against the horrors of *Game of Thrones*, *Valkyrie Profile* was a rarity among games: a mature, adult, unsparing tale of suffering and struggle. To recruit your party of Einherjar, they first had to die; to advance in the game, you had to offer them up a second time to the pending apocalypse in Valhalla. The game played up its themes of loss—items breaking in the middle of combat, an internal timer counting down to the end of the world—so as to make the player appreciate all the more what they had: a smart, challenging RPG in the body of a puzzling platformer. Which is to say, a heartbreaking hybrid. *Riccio*

88. *Devil May Cry 3: Dante's Awakening* (2005). For *Devil May Cry 3: Dante's Awakening*, Capcom wisely ditched *Devil May Cry 2*'s gloomy tonal approach in favor of a potent blend of extravagant gore, tongue-in-cheek comedic jabs, and increased difficulty curves. Being a prequel, the game was able to reintroduce the character of Dante, making him less of a grim figure and more of a shamelessly cocky, conceited, yet unusually magnetic antihero. A brilliant brother-versus-brother plot sets the stage for a turbulent journey that takes Dante from his humble shop in the grungy city streets to the innards of a massive flying leviathan and the tip-top of a hellish tower where family values are put aside in favor of unabashed personal glory. *LeChevallier*

87. *God of War III* (2010). It's not always true, but in the instance of *God of War III*, bigger is equivalent with better, and until this point, no game had ever fully managed to get the visuals to line up to such larger-than-life mythology. In this installment, gorgons were mere appetizers for Kratos, and while he'd deign to spar with "mere" harpies, impressively rendered and impassively sundered, the meat of the game had him running through ever-more-colossal environments, at one point even rappelling alongside the rippling, heaving bodies of the Titans themselves, stunning destruction occurring all around him. It was the closest a game had come to making a playable QTE, using its smooth controls to maintain an illusion long enough to, at times, make the player actually feel like a god. *Riccio*

86. *Metal Gear Solid 3: Snake Eater* (2004). Leave it to Hideo Kojima to follow the critical and commercial success of the second *Metal Gear Solid* with a sequel that abandons its most recognizable qualities. *Snake Eater* dropped players into an unfamiliar jungle bristling with hostiles human and animal alike, where they were left to fend for themselves without the expected comforts—no radar, no high-powered weapons, and no easily navigable map. And yet, despite the newfound emphasis on realism (a respite from the meta-game artifice of its predecessor), this was

still *Metal Gear* through and through: realism laced with the absurd. What else could it be? *Marsh*

85. *Child of Eden* (2011). Like its spiritual forbear, *Rez*, *Child of Eden*'s m.o. is the use of synesthesia—the sensory marriage of sight, sound, and rhythm—as a core mechanic for what's basically a wildly ambitious *Space Harrier* clone. *Child of Eden* then goes the insane, amazing next step: The playing field here is a computerized universe of music and natural beauty sent several rungs down the evolutionary ladder by a virus, and life itself is now your weapon. The purpose of every shot fired in *Child of Eden* is to evolve and bloom, growing simple pulsing beats, tiny single-celled organisms, and dormant seeds into breathtaking audiovisual glory. It's an experience that simply can't be had anywhere else in this life but on a console. *Clark*

84. *Grandia II* (2000). Both *Grandia* and *Grandia II* are masterpieces of the genre—comparable, sometimes even superior, to *Final Fantasy*'s finest hours. The Dreamcast's *Grandia II* is almost flawless, an epic adventure with an extraordinary cast of protagonists who are constantly ripped apart and reunited again to battle a treacherous enemy. Although its narrative is heavily focused on misguided religions and shifting definitions of honor and evil, nothing

ever gets too heavy-handed, due largely to the blossoming, down-to-earth central relationship between sullen mercenary Ryudo and oppressed songstress Elena. Memorable for its sensational story alone, stunning graphics and an immaculate turn-based combat system deftly elevate the game to magnum-opus status. *LeChevallier*

83. *The Beatles: Rock Band* (2009). By adding harmony vocals to *Rock Band*'s already welcoming template, *The Beatles: Rock Band* invited more non-gamers to join the fun, even as it led them from breezy sing-alongs to vocal challenges as brutal as any in gaming. It was all put together with a fan's devotion, with nostalgic cutscenes and marvelously obscure unlockables (for God's sake, the Christmas singles!). The collapse of the instrument-game market kept it from real mainstream awareness. But since *Rock Band* was the greatest communal experience in modern gaming, and the Beatles were the greatest communal experience in pop culture, if it's ever repackaged and promoted, it could be the greatest family gathering event since *The Cosby Show*. *Daniel McKleinfeld*

82. *Halo 3* (2007). The alien vessel you're trapped in is less a ship than a living *thing*. The rooms are bordered with bloated, swollen pustules stretched from wall to wall, while sacs of throbbing "organs" hang from the ceiling, from

which disgusting monsters emerge to attack—a stark contrast to the large endless fields that comprised most of *Halo: Combat Evolved*. Beginning on Earth with a bloody firefight in the jungles of Africa, then teleporting to an ancient structure beyond the edges of the Milky Way where multiple alien races feud, leading to the rescue mission in the disgusting *living* alien ship, before concluding with a recreation of the original *Halo*, *Halo 3* remains notable for its diversity of setting and how it complements its variety of action. Aston

81. *Rayman Legends* (2013). There's a dream every kid from the 8-bit era had of platformers growing up: the ability to play a cartoon. *Rayman Legends* is the grand-scale realization of that dream. This is a one-to-one translation of the manic energy and musical genius of a Chuck Jones cartoon to the digital realm, with full control over the mayhem resting in the player's hands. And the sheer amount of that mayhem in *Rayman Legends*—50-plus original stages, including 75 % of *Rayman Origins*' stages and a full-blown mini-game—is staggering in a day and age where a platformer can be blown through in a weekend. Clark

80. *Snatcher* (1994). Before *Metal Gear Solid* consumed the man's career, Hideo Kojima managed to fire off a single bracing shot of point-and-click cyberpunk adventure brilliance before going gentle into that batshit night. *Snatcher*

is still, undoubtedly, Kojima's baby, in that it wears its sci-fi influences, distrust of military-industrial complex, and its grounding in undeniably Japanese quirk proudly and boldly. But in the telling of this story, about body-swapping android assassins and the detective agency that hunts them in the years after the Cold War goes hot, Kojima finds a maturity, restraint, and scrappy ambition that, ironically, bigger budgets and better technology haven't granted him since. *Clark*

79. *Dragon Quest VIII: Journey of the Cursed King* (2005). *Dragon Quest VIII: Journey of the Cursed King* is a massive game, so much so that booting it up is akin to getting in a plane, taking off, and touching down in a foreign land. There are no shortcuts to be found here, no TARDIS-like building substitutes that are larger on the inside than the outside, no world maps that offer up miniature views of the dungeons you'll soon enter. No, by remaining true to its own scale and scope, *Dragon Quest VIII* came closer than any RPG before it to offering the freedom of a pure adventure, where every lovingly animated nook could be explored. *Riccio*

78. *Kingdom Hearts II* (2006). The origin of *Kingdom Hearts* sounds like a joke. *Shinji Hashimoto and a Disney exec walk into an elevator...* The rest is history. *Kingdom Hearts II* represents the series at its creative zenith, featuring a surprisingly deep story that daringly fleshes out themes of everlasting friendship and what it means to be truly heartless. The entire first act is essentially devoid of main protagonist Sora, with the player taking on the role of his Nobody, Roxas. It's unlike an RPG of this sort to drop twists in its prologue, but when Roxas's trials are revealed to be contained in a simulation, *Kingdom Hearts II* takes a thrilling, fanciful turn away from the norm and refuses to look back. *LeChevallier*

77. *Myst* (1993). In the days before high-speed Internet connections, most computer games left you sitting alone in a dark room, your face lit by a single glowing rectangle. *Myst* had a unique understanding of the simultaneous feelings of solitude and connection that come from sitting alone, reading words that someone left for you. The game's slideshow pace invited the player to linger, absorbing the details of its proto-steampunk environments like the reader of a dense novel. Just when computer games were becoming a world-shaking medium, *Myst* looked back to literature with a contemplative affection that was uniquely inviting for those uninterested in gaming's usual reflex tests. *McKleinfeld*

76. *Viewtiful Joe* (2003). A dazzling homage to movie magic, superheroes, and the 2D side-scroller that was warmly praised when released on the then-floundering GameCube, *Viewtiful Joe* employed a battlefield blueprint inspired by cinematic visual effects. Its VFX powers (Slow, Mach Speed, and Zoom In) put the player in the director's chair (or, perhaps, that of the editor), giving them the opportunity to control and cut their own stylish fight sequences while dispatching foes and solving puzzles. And with its charming art design (a nod to both Japanese tokusatsu and American B movies) and cel-shaded graphics done oh-so-right, it remains a reminder of what enchantment might result from the civil union of film and video games. *LeChevallier*

75. *Grim Fandango* (1998). *Grim Fandango* opens with something much scarier than being chased by necromorphs or overrun by zergs: simply being dead. Plenty of people have nervously speculated about the afterlife; this game reassuringly suggests that it will at least look awesome, by mixing Aztec aesthetics with noir tropes and presenting it with Tim Schafer's trademark wisenheimer goofiness. The widescreen tableaux of the graphic adventure worked like Beckett landscapes, adding a bracing chill to comic business. Amid the uncomfortable chuckles of the game's premise, the absurd logic of adventure games is a welcome pal, and every hard-boiled cutscene is a reward worth

working toward. *McKleinfeld*

74. *Metal Gear Solid 2: Sons of Liberty* (2001). It's difficult to overstate the sense of betrayal you feel when your favorite character is killed off roughly 90 minutes into a game you assume will star him. It put many of us on the defensive: We resented Raiden, the story's makeshift second hero, because he seemed to take the place of the avatar we wanted as our own. But the bait and switch that defined *Metal Gear Solid 2: Sons of Liberty* was instructive, teaching gamers to appreciate the importance of authorial control, which we learned meant trusting a creative vision even when its decisions didn't cohere with our desires. Games can only be art if they are governed by artists. Hideo Kojima was the first to risk alienating us to prove that he governed his. *Marsh*

73. *Jet Set Radio* (2000). By the time *Jet Set Radio* came out, the skateboarding game was already in its decadent phase, with players forced to memorize lists of buttons like bored yeshiva students reciting the Torah. *JSR* stripped the controls down to one stick and one button, replacing combo-memorization with a zen focus on the environment. Then that environment was filled with awesomeness. The cel-shaded graphics, witty cutscenes, and hip-hop-meets-J-

pop soundtrack—still the best original music in gaming history—are a fervent Japanese fan letter to American graffiti street art, imagining kids of all cultures united against corporate blandness. The game uses style the way a great pop star does: as the mortar to build a dreamed-for world. *McKleinfeld*

72. *Grand Theft Auto IV* (2008). Just as Niko Bellic comes to Liberty City to pursue the American dream, so, too, do players boot up *Grand Theft Auto IV* for that thrilling fantasy of untouchable freedom. Its twisted version of New York City, already a melting pot, perfectly conflated the protagonist's fantasies with the player's, to the point that you could spend hours surfing the (fake) Internet, watching (fake) cartoons on television, or even attending (fake) live shows near a (fake) Times Square while ignoring your (fake) girlfriend's texts. Okay, maybe going on a rampage and outrunning the N.O.O.S.E. authorities was a bit much, but everything else vividly blurred the line between art and reality, between having it all and having nothing. *Riccio*

71. *Shenmue* (2000). To play *Shenmue* for the first time was to be introduced to new possibilities for the medium. A few minutes pottering around downtown looking for distraction was enough to impress upon you a sense of Yokosuka

as a place people lived and worked and played in, and suddenly the world of gaming itself seemed bigger: In this sprawling expanse, amid all of this activity, there seemed an art of limitless richness. Yu Suzuki conceived of a game that would look and feel as life ought to—bustling, beautiful, and, yes, sometimes tedious—and, more incredibly, brought it to playable life. *Marsh*

70. *Grand Theft Auto V* (2013). *Grand Theft Auto V* was the culmination of a decade's worth of trial and error in open-world game design and mature, hard-nosed storytelling. Introducing three playable protagonists, each wildly different in personality and motivation, Rockstar created a digital melting pot of with such wide appeal and expansive scope that its transportive mimicry of a natural existence is something that won't be so readily replicated. Hours turn into days and days into weeks when sitting down to a session of *GTA V* (a notion that's repeatedly made fun of in its candid satirizations of ultraviolent video games, among other common vices), only escapable when the necessities of everyday life beckon, or when you simply collapse from lack of actual sustenance. *LeChevallier*

69. *Amplitude* (2003). Harmonix, a company that started as makers of virtual instruments, had a unique idea of what music gaming could be. Instead of using music to make people push buttons, they used gaming to make music

interactive. By visualizing a musical score as a series of binary triggers, *Amplitude* drops players into the staves, making polyrhythmic structures intuitively visible. It was the rare music game that understood music, and it remains the best explication of the formal structures of hip-hop and dance music, two genres often disparaged by people who don't understand how they work. *McKleinfeld*

68. *Street Fighter II: Championship Edition* (1992). In the long, storied bible of fighting games, *Street Fighter 2* is the first book of the New Testament, and the *Championship Edition* is its King James Version. Everything we know about how a fighting game is supposed to look, sound, and feel comes back to this game providing the wide array of character designs and mechanics, tweaking the balance of power between characters, and letting players be the bosses for the first time. The fact that this is still just as easy to pick up and play while still remaining challenging enough for tournament play makes it superior to much of what would follow in its wake. *Clark*

67. *Call of Duty 4: Modern Warfare* (2007). Updating the battlefield from Axis and Allies to a strife-ridden Middle East sounded, at first blush, like a novelty designed to reinvigorate a tired franchise, and yet *Call of Duty's* change

of milieu proved nothing short of revelatory. Few were prepared for the "completely cynical amusement," as Nicholson Baker memorably called it, of the harried first-person blitzkrieg Infinity Ward delivered, a duly contemporary spectacle replete with drone bombings and suicidal insurgents. Bleak? Necessarily. But the tinny *splink* of an armor-piercing round landing in an enemy's fleshy chest never felt so satisfying. There's a cynic in all of us. *Marsh*

66. *Beyond Good and Evil* (2003). We've finally reached a point in gaming history where gamers are finally starting to ask more of *The Legend of Zelda* as a series, not realizing that what they're asking for has been staring them in the face since 2004. *Beyond Good and Evil* definitely owes much of itself as a collection of gameplay mechanics to Ocarina of Time, but then takes that crucial creative next step for the whole idea of what Zelda could and should be. It manages to stay playful, colorful, and light in the midst of a heady sci-fi tale of human trafficking and alien civilizations, coupled with the same diverse world building and character design that Michel Ancel would bring to *Rayman* over the years. *Clark*

65. *Vagrant Story* (2000). There was once a time when Square, fire under their ass with the freedom afforded by the PS1, would experiment far away from their comfort zone with formula, with genre, with gameplay. *Vagrant Story* was the last of those experiments that worked, and probably the only one to flirt this closely with perfection. The video-game company's typical fantasy affections are stripped away, leaving a tricky political yarn about an assassin sent to a Gallic labyrinth of a city to kill a cult leader. And it's a yarn powered by possibly the deepest, most intuitive combat and crafting systems Square's ever conjured up. *Clark*

64. *Donkey Kong Country* (1994). *Donkey Kong Country* wasn't a rhythm-based game, but there was an ineffable quality to it—perhaps the manic momentum and pumped-up precision—that made the gamer feel as if they were swinging from vine to vine themselves. Whereas other platformers followed tentatively in the footsteps of predecessors like Mario, Donkey Kong simply barrel-rolled through, trusting players to figure out a way through the complex bramble and coral-reef mazes. Every inch of the game presented a lush, well-considered obstacle, and never seemed content to repeat itself. It was the king of the jungle. *Riccio*

63. *Silent Hill* (1999). *Silent Hill's* strongest character is its setting, a town as a twisting manifestation of a broken psyche. Harry Mason awakens from a car crash, his daughter gone. The fog is thick around him, and he can only see a figure in the distance: a young girl. She turns and runs, and he pursues her, but the world around him warps into an evil that kills him. The deeper one delves into the game's unsettling, oppressive atmosphere, the further the curtain is pulled back to reveal the nature of a place where childhood terrors manifest as corporal demons and the fear of menstruation makes walls bleed rivers of blood. Every element works in peerless conjunction to serve the themes of familial loss, childhood abuse, and the terrifying impact of religious extremism. *Aston*

62. *Star Fox 64* (1997). Rail shooters typically confine players to a predetermined route, but *Star Fox 64* made the furthest reaches of the Lylat System feel as if they were freely explorable, even when your Arwing was ultimately being guided toward its terminus by unseen hands. On the very first level, swooping through rocky archways and defeating a hovering assault vessel hidden behind a waterfall bypasses the standard path to Meteo and sends you to Sector Y, a starlit space mission complete with mobile suits and plummeting debris. Select boss encounters even opened up to an "all-range mode" that allowed for fancy direction reversals and foe-discombobulating maneuvers. It was this surprising sense of freedom, as well as clean graphics and spotless controls, that made the game a classic. *LeChevallier*

61. *You Don't Know Jack!* (1995). What does a Victoria's Secret model and feldspar have in common? Which video-game series did Nostradamus *not* predict? *You Don't Know Jack!* offers players the chance to participate in the funniest, craziest, most irreverent game show imaginable, where historical trivia about Joan of Arc is filtered through the lens of Dr. Phil, and musical questions about the *1812 Overture* include actual cannon shots firing. The snarky, insulting narrators allow players to gang up on each other, and will even take a break from the prewritten multiple-choice trivia to call up random individuals from the phone book to come up with questions. It's exactly the right blend of general knowledge and insanity that's kept the franchise strong for nearly two decades. *Aston*

60. *Deus Ex: Human Revolution* (2011). What most stands out about *Deus Ex: Human Revolution* is the profoundly detail-rich realism of its near-future world. Every location is alive with propaganda streaming on billboards and advertisements for and against the technological movement that drives the narrative. In a world that changes based on player actions, and often in subtle way, citizens mix and engage in conflict with criminals and law enforcement alike. The game demonstrates the power of the medium, wherein interactivity can reveal new ideas about the core themes and narrative at every turn. A prequel about ethics and consequences, *Human Revolution* depicts a world struggling to adapt to changing technology and its often insidious consequences. *Aston*

59. *Hotline Miami* (2012). Amid the arms race of next-gen graphical evolution and the seemingly endless deluge of triple-A blockbuster shooters arrived a veritable thunderbolt of weird, *Hotline Miami*, and the landscape of modern gaming would never again be the same. A hallucinatory top-down action game that plays like *River City Ransom* as imagined by David Lynch, *Hotline Miami* is a fever dream of violence and retro gaming, pulling together the tropes of the medium's innocent infancy and turning them into something altogether darker. Jonatan Soderstrom and Dennis Wedin didn't simply make a classic game; they burrowed their way into the deepest recesses of gaming's unconscious, and the result feels like a nightmare you just had but only half-remember. *Marsh*

58. *Conker's Bad Fur Day* (2001). Considering the reason so many of us play video games, it's odd how often most titles follow a very specific set of unspoken rules. Not so with *Conker's Bad Fur Day*, a recklessly unfiltered, untapped, superego-filled romp through a parody of inanely inoffensive titles like *Banjo-Kazooie*. Conker cursed and solved puzzles by getting drunk enough to extinguish flame demons with his piss, blithely sent up pop culture as diverse as *A Clockwork Orange*, *Saving Private Ryan*, *Alien*, and *The Matrix*, and still had time to lob rolls of toilet paper down

the gullet of a giant operatic poo monster. For sheer balls, lunatic ingenuity, and crass charm, there's never been anything like it. *Riccio*

57. *Xenogears* (1998). Not one to play second fiddle to the likes of *Final Fantasy VII*, *Xenogears* saw Squaresoft following its mammoth JRPG success with an even bigger undertaking that pushed the cabalistic boundaries of video-game plotlines to the extreme. To fully enjoy this complex, vast, and exhaustively symbolic experience heavily influenced by Freud, Jung, and Nietzsche, it takes an open mind and supreme dedication on the part of the player. Its excellent battle system makes the spiritual prequel *Xenosaga*'s simplistic combat regimen seem dull by comparison. The exquisite *Xenoblade Chronicles* did well to resurrect interest in the series, causing curious fans to seek out *Xenogears* and discover the wondrous origins of this under-appreciated property. *LeChevallier*

56. *Mass Effect 3* (2012). Everything is on the line in the final chapter of the *Mass Effect* trilogy, which profoundly views sacrifice as an imperative. Having long ignored Commander Shepard's warnings, every being in the universe now faces destruction as the genocidal Reapers bring ruin to every world. The theme of this series has always

been inclusivity, and it's with this in mind that the player must travel the game's large and multifaceted universe to end wars, unite races, and build a resistance to an absolutely devastating threat. All the way toward the largely misunderstood climax that brings the game's themes together in an intelligent and metaphysical way, one is forced to make difficult and heady choices, including sacrificing beloved characters and sometimes entire species toward a common good. Aston

55. Marvel vs. Capcom 2: New Age of Heroes (2000). The marriage of Marvel and Capcom was a match made in heaven. Spider-Man versus Chun-Li. Wolverine versus Strider Hiryu. Captain America versus Tron Bonne. The insane bouts went on and on, thanks to *Marvel vs. Capcom 2: New Age of Heroes* and its benevolent roster of 56 fighters, each one able to be mastered and used to promptly upset even the most skilled of opponents. The balance in the game remains remarkable; selecting squads of three fundamentally eliminated the unwelcome perils of facing a drastically overpowered team. The winning formula carried over to *Marvel vs. Capcom 3* and its imitators, but *New Age of Heroes* is doubtlessly the most seamless 2D brawler of its generation. LeChevallier

54. *Metal Gear Solid 4: Guns of the Patriots* (2008). You get the sense, within a few minutes of playing *Metal Gear Solid IV: Guns of the Patriots*, that Hideo Kojima has been waiting for technology to catch up to the vision he's realized here. The sheer breadth of this thing is staggering: The globetrotting, continent-spanning action would have been a technical impossibility before Kojima and Konami strained the limits of the PlayStation 3 to make it happen. But this isn't mere feat of engineering. Kojima's ambitions are chiefly artistic—idiosyncratic, instantly identifiable, and utterly weird. Only the *Metal Gear* series could imagine a world so singular on a \$60-million budget. Would that every blockbuster were so strange. *Marsh*

53. *Final Fantasy Tactics* (1998). Not for nothing is one of the 20 main classes in *Final Fantasy Tactics* labeled a Calculator. This is a game for math geniuses, with no end to the mix-and-match job customization offered. Or it's a game for future military commanders, with over 60 chess-like scenarios to survive, often at great odds. Or, with real-world inspirations like the War of the Roses at heart, perhaps it's a tale for historians. There's magic, too, and yards of in-game lore to read, so it's for English majors as well. Other games presented lessons, but *Final Fantasy Tactics* was the complete package, a school unto itself. Many strategy RPGs preceded and followed it, some even hewing closely to the same fundamental systems, but none have managed to capture this blend of fact and fantasy. *Riccio*

52. Chrono Cross (2000). For half of its playtime, *Chrono Cross* is simply Square at the height of their creative powers, telling the tale of a teenager named Serge stuck in an alternate dimension where he drowned as a child, essentially playing out a less confusing version of the last two seasons of *Lost*. The question lingers in those hours of why exactly it invoked the holy name of *Chrono Triggerto* tell it. The game starts answering that question in the second half with the kind of reality-bending timeline gymnastics that would give Shane Carruth a nosebleed, with the damage done to time in *Chrono Trigger* used here as a conceptual jumping-off point. The end result is one of the most satisfyingly dense RPGs ever made. *Clark*

51. The World Ends with You (2008). If the world did indeed end with me, *The World Ends with You* is the game I'd probably still be replaying. I might not even notice, because it's that absurdly inventive and addictive. This real-time, dual-screen action RPG was so original that it *still* doesn't have any imitators (though others have borrowed from its customizable difficulty). With its real-world portrayal of Shibuya, down to the muddled masses and the mind-altering memes and status-influencing fashion trends that controlled them, the game wasn't just a hip response that imitated life in the modern world, it was a cultural part of it. *Riccio*

50. *Bayonetta* (2010). One of the most hysterically ridiculous games ever made, *Bayonetta* is the story of a super-powered 10-foot-tall dominatrix-librarian-witch with glasses and a skintight outfit made of her own hair who battles rival witches, heaven's angels, and finally God himself. An empowered female protagonist overfetishized to the point of parody, she's a corrective to gaming's view of women primarily as eye candy or damsels in distress. *Bayonetta*'s universe is one in which men are completely disempowered, impotent against a race of Amazonian women who rule the world. The clever subversion of the typically male-dominated action genre is complemented by stunningly deep, addictive, and rewarding action mechanics, many utilizing Bayonetta's own hair as a weapon. Aston

49. *Grand Theft Auto: Vice City* (2002). No game had ever been as cinematic as *Grand Theft Auto: Vice City*, with a Hollywood actor in the lead and elegant visuals that leveraged the precision of a virtual camera. But for all its movie envy, its real greatness was its nonlinear sandbox. You spend a lot of time aimlessly driving around, so it was a good trick to give every vehicle unique handling and create so much entertaining audio content that tooling around listening to the radio was fun. Especially if you set a few of the NPCs on fire to launch a cheerfully debased Punch and Judy show. Rockstar's insistence on the surrealist comedy of pixilated mayhem has always been controversial,

which suggests that they understand their medium far better than their detractors. *McKleinfeld*

48. *Journey* (2012). A mute, red-cloaked idea of a character trudges through a seemingly infinite desert, scarf flapping in the gentle wind. The light from that far-off mountain beckoned, but not urgently, not if you wanted to smell the digital flowers. Pride came not from eluding enemies, or from conventional progress, but from seeing something new. Stumbling over ruins in the sand left players wondering not at the Ozymandius-like game they might have missed, but at the dreamy fantasia left behind. And when the game matched you with a second player, when it let you *share* that experience, and silently, save for the chirps that served as the game's internal language, *Journey* was the Everygame. *Riccio*

47. *Max Payne* (2001). On a winter's night some months after the death of his wife and child, renegade DEA agent and ex-cop Max Payne takes to the streets of New York on a bloody *Punisher*-esque quest to avenge his family, cleaning up the corrupt city and uncovering the conspiracy that cost him everything. Combining graphic-novel noir storytelling with addictive *Matrix*-inspired "bullet time" gunplay, *Max Payne* still stuns for its rush of varied visual

poetry. At the push of a button, Max moves and aims in slow motion, giving him the edge against his trigger-happy enemies, and these endlessly replayable sequences evoke the fantasy-fulfillment of playing Neo in *The Matrix*'s infamous lobby scene, or as one of John Woo's renegade heroes. *Aston*

46. *Final Fantasy IX* (2000). *Final Fantasy*'s last hurrah on the PlayStation pulled off a neat trick in that it ditched the flamboyant character, environmental, and combat aesthetics of *FFVIII* in favor of a more old-school approach that paid homage to the pre-3D episodes. It allowed players to focus more on the story, rather than absurdly large swords, guns, or swords that are also guns. The saga of Zidane and Garnet remains a romance for the ages, responsible for one of the most uplifting game endings of the past 20 years. And the battle system remains suitably uncomplicated, showing how beneficial it can be when Square restrains itself from going over the top. *LeChevallier*

45. *Super Mario World 2: Yoshi's Island* (1995). A 2D pearl with enough creative energy and nuanced artistry to fill two games, this sequel to *Super Mario World* gave the Yoshi clan their rightful time in the limelight, and in the process developed a set of ingenious platforming mechanics that have yet to be even shoddily imitated. Yoshi's flutter jump,

in combination with his egg aim-and-throw technique, made for a unique variation on the typical side-scrolling *Super Mario* escapade. Certain areas also allowed Yoshi to transform into a multitude of vehicles that could navigate previously unreachable areas. *Yoshi's Island* is a game that's absolutely brimming with pioneering ideas, representing Nintendo at its most fearlessly experimental. *LeChevallier*

44. **Katamari Damacy (2004).** It's impossible to summarize *Katamari Damacy* with the language of literature or film: plot, character, iconic images, expressive subjectivity. Instead it makes art from gaming's preferred values: accumulation, variation, interaction, progress. The story is absurd, and its visuals and controls are willfully crude. Yet it's a well-honed machine that generates pure joy. Because lurking behind the serious silliness is a glimpse of theme: The game is an elegant metaphor for growing up, in which the world becomes fuller and more detailed the bigger you get, beautifully conveying the thrill of an expanding horizon. If that's not art, what is? *McKleinfeld*

43. **Super Mario 64 (1996).** We didn't have a template for 3D games until Nintendo conceived of one for us. *Super Mario 64* was an architectural marvel designed and built without a blueprint: The rolling open-world hills

and sprawling primary-color vistas that seem as familiar to gamers today as the world outside were dreamed up out of nothing more than programmed paint and canvas. Shigeru Miyamoto was given the unenviable task of contemporizing his studio's longest-running and most prominent franchise while remaining true to its 2D legacy. It's a testament to Miyamoto's accomplishment here that, nearly 20 years later, the result feels no less iconic than the original. *Marsh*

42. *Castlevania: Symphony of the Night* (1997). Dozens of games have referred back to the things *Symphony of the Night* did back in 1997 to veer the traditionally linear *Castlevania* series off into completely unknown open-world territory, and few have done it as spectacularly. The main castle and its spectacular upside-down counterpart are staggering achievements in art design, and the score contains two or three of the best classical compositions of the last two decades. But more than this, the experience of exploring every haunted nook and cranny of this place, so drowning in secrets, unique weapons, and non-repeating enemies, is astounding to this day, whether the player is on his or her first or 40th playthrough. *Clark*

41. *Psychonauts* (2005). In a console generation starved for whimsy, the good-natured charm of *Psychonauts* was shocking. There are gruesome scares a-plenty (the kids getting their brains pulled out through their nostrils will linger in nightmares for a long time), but the tone is always gleeful and the dialogue always hilarious. The style makes a great first impression, but what keeps it on so many best-of-all-time lists is the sugar-high creativity of the level design. Each level of the game introduced new gameplay elements that were easy to figure out and tied beautifully to the story. *Psychonauts* fulfilled the ludological dictum of making gameplay into narrative, and the much harder trick of making it look effortless. *McKleinfeld*

40. *Uncharted 2: Among Thieves* (2009). Take Spielberg's *Indiana Jones* films, set them in the modern day, remove any limitations of budget, or respect for public property or stuntman safety. That's the *Uncharted* series. But where the first *Uncharted* almost feels timid, the work of a studio getting its bearings with the PS3, *Uncharted 2* exudes a more confident swagger. Naughty Dog knew the first time they could craft any adrenaline-pumping set piece imaginable. It's in how much effort they've spent making Nathan Drake and his supporting cast feel like fleshed-out, vulnerable, nuanced human beings who make very human mistakes, even in the middle of those set pieces, that makes *Uncharted 2: Among Thieves* seem like a Herculean jump ahead of its predecessor. *Clark*

39. *Final Fantasy VI* (1994). There's a classic *South Park* episode that mocks the fact that if there's a joke you like, chances are *The Simpsons* already did it. The same can be said for *Final Fantasy VI*, which basically broke and reset every rule for the modern RPG. It would have been impressive enough to feature 14 playable characters, each with their own unique abilities (like Sabin's *Street Fighter*--like combinations); or to introduce the steampunk combination of magic and technology to the genre; or to offer branching narrative paths; or to stuff the game with enough side quests to fill an entire sequel, but *Final Fantasy VI* did it all—first and flawlessly. That a game in which the world is destroyed halfway through also finds time for humor, thanks to a certain cephalopod, is just icing on an already gluttonous cake. *Riccio*

38. *Banjo-Kazooie* (1998). Here's the odd game that boasts a split-personality protagonist: an amiable bear representing the superego and an obnoxious bird representing the id. While Nintendo created the 3D-platformer template with *Super Mario 64*, Rare refined it with their tongue-in-cheek *Banjo-Kazooie*. The humor and game mechanics simultaneously develop all the way through to the hysterical game-show finale and subsequent boss battle that effectively takes advantage of all skills acquired across the game. Subbing the blank-faced plumber with

a chilled bear and his sassy backpack-bound avian sidekick, the game stands out for its self-awareness: An unusually meta experience, it constantly pokes fun at its contrived storyline, limited characterization, and other gaming tropes. Few games are so accomplished in both personality and gameplay. Aston

37. *Eternal Darkness: Sanity's Requiem* (2002). Five hours into *Eternal Darkness: Sanity's Requiem*, it asked if I wanted to delete my saved game. I declined, then watched in horror as my progress was irrevocably erased anyway. *This can't be happening*, I thought to myself, gripping my controller in shock. And, in fact, it *wasn't* happening, as this was just one of the many meta frights that turned *Eternal Darkness* from internal, character-focused survival horror to an external psychological horror game that messed with players. Were you accidentally sitting on the remote, or was the game turning the volume down for you? Were you missing a hidden switch in the room, or was every door just temporarily locked? There has yet to be a game as delightfully maddening. Riccio

36. *Rock Band 3* (2010). From singing vocals in harmony to hammering away at a four-piece drum kit, *Rock Band* makes players feel like they're *part* of the music. The series hit its apex with *Rock Band 3*, the natural evolution of

the series that introduced the keyboard to accompany the drums and guitars, and upgraded the plastic guitar with a real one. While Activision's competing *Guitar Hero* franchise fell apart with unwelcome, irrational, and incompatible yearly iterations, Harmonix treated *Rock Band* as a platform, allowing players to buy whatever songs they wanted and adding valuable features with each release, like the ability to play music online, expanding the party internationally. How else can I sing Journey with my friend in Canada from my house in the land down under? Aston

35. *Power Stone 2* (2000). *Power Stone 2* one-ups its predecessor by introducing four-player battles that, at their craziest, make *Super Smash Bros.* and its sequels look comparatively tame. Running around hazardous, item-heavy warzones, with the short-term goal of repeatedly amassing three of the titular gemstones, prompting an all-powerful transformation that decimates opponents with arena-filling special moves was an event likely to instantaneously change the mind of any Dreamcast naysayer upon round one of play. With all the chaos at hand, it was astonishing how little slowdown ever occurred. *Power Stone 2* remains exhibit A to showcase the prowess of the once mighty Sega Dreamcast, a console that went the way of the dodo long before it should have. *LeChevallier*

34. *Dance Dance Revolution* (1998). *Dance Dance Revolution* introduced gamers' feet to the thrill that their hands had long known: high-speed patterned motion. Or as humans call it, dancing. And it felt great, because, as people who weren't spending their nights hunched over computers knew, dancing is fun. Suddenly a whole generation of kids returned to the arcades, made abruptly relevant again by the space requirement of full-size metal dance pads. Long before televised dance competitions returned to prime-time television, YouTube was packed with hot-shit kids racing through steps like vaudeville hoofers. *Dance Dance Revolution* convinced non-gamers that video games weren't just for basement-dwelling trolls, and convinced gamers that their body wasn't just something to abandon in a chair. *McKleinfeld*

33. *Super Smash Bros. Melee* (2001). The best games of all time invoke an almost instant sense of nostalgia. Make no mistake: *Super Smash Bros. Melee*'s charms aren't simply generated from the goodwill of its roster of characters, classic heroes like Link or Mario, but from its own chaotic twist on combat, as much a matter of playing evasion ballet as of mastering the various power-ups and environmental hazards. That said, taking such a deep bench of characters out of their elements and into a brawler was not without a special sort of charm, as watching *F-Zero*'s neglected Captain Falcon take revenge on an overstuffed Kirby or having Jigglypuff knock-out Luigi will simply never get old. *Riccio*

32. *Batman: Arkham City* (2011). Before him lay two bodies. One is his nemesis, a deranged serial killer behind fanatical displays of destruction, the other his lover, a once-innocent girl caught up in the plots to overthrow Gotham. Only one matters to him, and Bruce Wayne carries his body out of the tomb for everyone to see. Arguably the only downfall in *Batman: Arkham Asylum* was its finale, a tonally and narratively incoherent victory against the Joker that went against the bleakness of everything prior, but not so with follow-up *Arkham City*, which boasts one of the most aggressively nihilistic endings in the history of the medium. As the game's setting expands from the smaller sanitarium to the larger city, so does the sense of hopelessness for the characters, rendering every victory pyrrhic in nature." *Aston*

31. *Tetris* (1986). *Tetris* is a game of pure abstraction, its mastery of the simplest possible visual units as ideal and impersonal as the Helvetica font. It's no coincidence that it came to America as an ambassador from a foreign country; like the math equations on the Voyager shuttle, it speaks a language even space aliens could comprehend. The fundamental gameplay imperative of fitting blocks together is almost offensively infantile, but players who master the game can feel neurons growing as they learn to stop just seeing the shapes, and start seeing the negative space around

them. The system recalibrates your perceptions as you explore it, and that's what a great game is about. *McKleinfeld*

30. *The Walking Dead* (2012). No one would've faulted any developer for slapping *The Walking Dead* name on a lackluster *Left 4 Dead* rip-off, and waiting for the cash to roll in—like Activision tried to do with *Survival Instinct*. But instead, in Telltale Games's hands, *The Walking Dead* is going to go down as not only the game that shocked the entire adventure game genre out of atrophy, but as a brutal and brilliant Cormac McCarthyian tale of terror and human loss unprecedented in this medium. This is a game where success is almost entirely measured in the structural integrity of a little girl's soul, and the decisions you've made to keep it intact. This is the story the AMC show only dreams it's built across its four seasons. *Clark*

29. *Pokémon Red and Blue* (1998). The Internet can be a heinous place, but when the masses use it to cooperate on a joint task, no matter how seemingly insignificant, wonderful things can occur. That happened earlier this year with

the social experiment dubbed "Twitch Plays *Pokémon*," wherein a populous chat room of participants could input commands that would control an emulated version of *Pokémon Red*, painstakingly completing a single run-through of the main game in 16 days' time. This strange yet continuously alluring examination of interests and correspondence highlighted, more than 15 years after its original release, how pivotal, ageless, and unifying the introductory *Pokémon* games are. The methodology holds strong: see *Pokémon*, catch *Pokémon*, live *Pokémon*. Together, now and forever. *LeChevallier*

28. *Rez* (2002). It takes about five seconds to understand the appeal of *Rez*. Its aesthetic is so distinctive, its style of play so radical, that finding yourself attuned to its wavelength is as easy as turning it on. The tactility of video games, of course, make them an almost synesthetic experience, drawing a connection between image, sound, and touch. *Rez* seizes on that connection and deepens it, until you believe you can see and feel the sound around you. The rhythmic touch of a button creates a flash of DayGlo color and a burst of techno music, all of it pulsing in the air you're flying through. *Marsh*

27. *Metroid Prime* (2002). On paper, *Metroid Prime* should've been the game that made us all believe that the *Metroid* franchise should've stayed dead after that excruciating eight-year gap between *Super Metroid* and this release. In reality, Retro Studios defied every expectation that came with dragging a side-scroller kicking and screaming into 3D. Everything that made *Super Metroid* brilliant—the isolation, Samus's varied arsenal, the sheer size of the world—remains. What Retro added was grand, evil beauty to Samus's surroundings, a subtly creepy story of ill-fated alien civilizations told entirely without breaking gameplay, and a laundry list of FPS innovations that felt next-gen, and in more than just the graphics, even when the game got prettied up for the Wii. *Clark*

26. *Super Mario Bros.* (1985). It's such a great day when you start up *Super Mario Bros.*, skipping across the grass under blue skies while happy music plays. No platformer had ever made jumping feel so instinctively right—so brisk at the start and so smooth on the drop. With *Super Mario Bros.*, Nintendo unleashed the ability that's served them well through all subsequent console generations, a knack for making the repetitiveness of 8-bit physics feel warm and organic. The game went on to work changes on the theme like a Bach fugue, with secrets that anticipated world-building games like *The Legend of Zelda*. But even at its most controller-smashingly frustrating or obscure, it's the controlled delight of the jump that holds the player in a perfect little pleasure loop. *McKleinfeld*

25. Resident Evil 4 (2005). In *Resident Evil 4*, your mission to save the president's daughter from kidnappers quickly goes south, stranding you in a rural village surrounded by crazed villagers infected with something very, very wrong. The game offers no guidance as to how to react or escape, leaving the player in a state of anxiety as Leon Kennedy attempts to flee only to be quickly cornered and overcome. The series's transition here from the stationary camera of the previous games to a fully 3D environment was a major step forward for third-person action games, but the sense of uncertainty that wracks the player throughout the lengthy narrative, of being made the center of a horrific, frenzied nightmare, is what made this game one of the most profoundly discomfiting experiences video games have ever seen. Aston

24. Ico (2001). Single-player video games are lonely. *Ico* made loneliness feel magical by giving you a companion, even as it constantly reminded you how alien her mind must be. Just like Princess Yorda's gnomish utterances imply a story that she just can't share with you, so does the game's environment imply a vast narrative of which this story is only a part, creating a potent illusion of context by withholding backstory. While the gameplay itself is basic puzzle-solving and crude combat, it's the mood that makes it special, the constant sense that there's something vast

just outside the frame. *McKleinfeld*

23. *Final Fantasy X* (2001). *Final Fantasy X* was a great big teenage yawp of a game. But for all the adolescent strum und drang of the my-father-is-a-monster plot, it's the good-natured physical enthusiasm of jocky bro-tagonist Tidus that made all the wandering around a joy. The game unapologetically embraces grinding, while decorating the long string of encounters with baroque style. Of course, it looks cutting-edge gorgeous and has a big, emotional story—this is *Final Fantasy* after all. But what made *FFX* special was how it cut away the dross of JRPG battles mechanics. Instead of making the player mindlessly tap the "Fight" button for the first several hours, the game demanded strategic choices from the beginning, so that every battle provided satisfying strategic challenge along with the groovy combat animation. *McKleinfeld*

22. *SoulCalibur* (1999). You know a game has done something spectacular when most of the people who love it forget its predecessor ever existed. Considering *Soul Edge* is one of the best PS1 games in its own right, that should say everything about how far *SoulCalibur* pushed the envelope: full 3D movement, stunning environments, one of

the best, rousing scores ever composed, and, of course, the fast, fun, and fluid combat. Not since the first *Samurai Shodown*'s heyday had a developer managed to make epic swordfights feel like, well, epic swordfights, and yet *SoulCalibur*'s brand of flying-spark chaos manages to deliver that experience to everyone, regardless of skill. *Clark*

21. *EarthBound* (1994). There has never been a game as irreverently comic and deceptively touching as *EarthBound*. It takes place in a darkly skewed version of Earth, with 13-year-old Ness's "rockin'" telekinetic powers and trusty baseball bat going toe to toe with local gangs and bullies, Happy Happy cultists, and drugged-out hippies. Despite liberally borrowing from RPG conventions (including an emphasis on grind-heavy gameplay), the game oozed originality in just about every other aspect, offering more than just escapism, but, in its battle against loneliness and negative emotions, a reason to ultimately set the controller down. *Riccio*

20. *The Legend of Zelda: A Link to the Past* (1991). In 1991, a console game of such depth and sophistication as boasted by *The Legend of Zelda: A Link to the Past* was simply beyond conception. In fact, it was almost beyond

possibility: Nintendo had to expand the capacity of their console's cartridges to make room for the breadth of what they'd hoped to do here. The results were well worth the expense and effort. You didn't just play this game, but plunged headlong into its adventure, entering a story and a world whose fate you felt lay in your hands. Today, though, *A Link to the Past* ought to be regarded as more than a milestone for a franchise still evolving. It is what is in its own right: a legend. Marsh

19. Super Mario RPG: Legend of the Seven Stars (1996). There was once a time when Square and Nintendo held hands and skipped merrily through fields of sunflowers, and gems like *Super Mario RPG: Legend of the Seven Stars* remind us of how awesome it was when these two industry titans parted together. The game turned the Mushroom Kingdom on its head by thrusting the famous plumber into a quest that was anything but a run-of-the-mill Mario venture. Bowser wasn't the Big Bad, but instead a comrade, fighting alongside his adversary in addition to Princess Toadstool and newcomers Mallow, a cloud boy, and Geno, a possessed doll. The game's razor-sharp wit and intuitive battle system made *Super Mario RPG* a success and paved the way for the *Paper Mario* and *Mario & Luigi* series. LeChevallier

18. *Portal* (2007). One great thing about video games is that every aspect of them, from how trees look to whether gravity works, is a decision. Valve's previous games had expertly simulated physics; *Portal* asked what would happen if, like God, you could make physics different. And it presented that slapstick joke with sophisticated narrative panache. Melding wunderkind student designers with veteran comic writer Old Man Murray, *Portal* grounded its spatial wackiness in recognizable (in)human resentments. The story of GLaDOS and Chel is one of the great, Bechdel-test-passing double acts in gaming history, made all the funnier by Chel's classic-FPS taciturnity. *McKleinfeld*

17. *Super Mario World* (1990). *Super Mario World* feels like Nintendo's own technology finally catching up with every lofty, unattainable gameplay idea they couldn't implement between 1985 and 1990. This is from an era where the first game a developer released on a new system had something to prove, and the chip on Nintendo's shoulder shows here. The game still feels massive, teeming with secret stages, alternate exits, stylish, Rube Goldbergian stage design, and verticality the likes of which could never have been done prior, and hasn't really been done as expertly since. Add the fact that this is a *Super Mario Bros.* game that actually gives Super Mario a cape, and contains Yoshi's first appearance, and this is still one for the ages. *Clark*

16. *Final Fantasy VII* (1997). The death of Aeris Gainsborough heralded a new truth about the medium: Video games can make you cry. The sweep and thrust of *Final Fantasy VII* engrossed as few adventures do, of course, but to be moved by the emotional dimension of this story—to be invested in the lives and deaths of Cloud Strife and his crew of AVALANCHE eco-terrorists, to feel compelled to save this world as if it were your own—suggested the beginnings of a new kind of video-game experience. Love and pain and beauty are coursing through this thing. Action and adventure are at its core. But emotion is its lifeblood. *Marsh*

15. *Silent Hill 2* (2001). *Silent Hill 2* is a game about grief. The story is simple: A widower is drawn toward the eponymous side-side town after he receives a letter from his dead wife, who asks that he meet her in their "special place," a hotel off the shore. In *Silent Hill* he finds terrible things: monsters, demons, all glimpsed hazily through a shroud of impenetrable fog. But worst of all he finds the truth. This isn't a game about battling creatures or solving puzzles; those elements hang in the background like the ornamentation of a bad dream. In *Silent Hill 2*, you find yourself asleep, and the game is about needing to wake up. *Marsh*

14. *Mass Effect 2* (2010). In *Mass Effect 2*'s courageous opening, Commander Shepard and his personal *Enterprise*, the *Normandy*, are obliterated by an unknown starship. Years later, Shepard's body is recovered by shady terrorist-cell Cerberus, who revive the Commander, then take him or her under their employ, offering their unlimited resources in exchange for "serving" humanity. It's a risky, morally uncertain opening that prefaces BioWare's emotionally rich space epic, allowing the player to create their own protagonist and subsequently form a team to battle a universe-threatening menace, all the while questioning the morality of their actions and benefactors. The game allows individual characterization, and the power of one's decisions illustrates the great strength of this medium over other art forms. Aston

13. *The Legend of Zelda: The Wind Waker* (2003). Link's Odyssean adventure is a voyage of discovery, of sailing across vast oceans and encountering islands where different species inhabit. Unlike other 3D games whose graphics quickly become ugly with technological obsolescence, *The Legend of Zelda: The Wind Waker*'s cel-shaded aesthetic suggests a timeless Hayao Miyazaki film made effortlessly playable, of childhood dreams come to life. Its richness also derives from the genuine depth and maturity to its narrative, so redolent of Greek mythology, of children suffering for the sins of their ancestors and given the lofty task of saving the world from ancient evils long thought buried, undergoing experiences that will forever change them. Aston

12. *Ōkami* (2006). The sun goddess Amaterasu, taking the form of an angelic white wolf, sets out to vanquish the eight-headed demon Orochi from Nippon. So begins a tale worthy enough to follow any of the most revered Japanese folk legends in a century-spanning anthology. With aesthetics that pay tribute to the ancient art of calligraphy and the soulful connection between painter and brush, *Ōkami* bleeds beauty from every pore. Combat, too, is akin to the elegant strokes of bristles on parchment, smoothly interweaving Amaterasu's lightning-quick attacks with swipes of the Celestial Brush, a tool that allows for on-screen drawings to come to life, aiding in both battle and puzzle-solving. A charming sequel, *Ōkamiden*, was later released for the Nintendo DS, but its lack of lasting impact proved the peerless original wasn't in need of a continuation. *LeChevallier*

11. *Goldeneye 007* (1997). Not only was *Goldeneye 007* one of the rare film-to-game adaptations that worked, featuring complex level designs (and bonus objectives scaling to difficulty) that required equal measures of stealth and shooting, but it also defined an entire generation of FPS gamers with its heated four-player split-screen multiplayer. The film lasted only a few brief hours, but the experience of sitting beside three dear friends, sneakily watching *their* screens to get a better read on their position, and then watching as they accidentally walked into the corridor you'd

just riddled with proximity mines was the sort of halcyon summer haze that memoirists dream of. *Riccio*

;

10. *BioShock* (2007). *BioShock* had greater narrative and thematic ambition than any previous big-time first-person shooter. But the real magic came—as it always does in great art—in how it was told. The FPS is well-suited to immersive exploration, and every corner of *BioShock* had some detail that expanded the story. Even the enemy AI, which gave all NPCs background tasks, convinced the player that Rapture was a world going about its business before being interrupted by your murderous intrusion. And no game has ever been so smart about cutscenes, the bane of most narrative FPS titles. *Bioshock* elegantly led you through its levels with subtle environmental cues, and when it took away control, it did so for a very good reason. *McKleinfeld*

9. *The Legend of Zelda: Majora's Mask* (2000). *The Legend of Zelda: Majora's Mask* has Link living his own personal Groundhog Day scenario to prevent a very-pissed-off-looking moon from crashing into the world, and right off the

bat with that premise, the series is in heavier and more innovative territory than usual. The game still manages to reuse everything worth taking from *Ocarina of Time*'s template, but also adding just a drop of haunting, elegiac melancholy, casting a much different and enthralling pallor over the whole thing than anything the series has seen. *Majora's Mask* is as close to grim-and-gritty as *The Legend of Zelda* ever needs to be, but it's also the one game in the series that every developer, Nintendo included, can learn the most from, when it comes to adding depth, not darkness, to a series such as this. *Clark*

8. *Braid* (2008). *Braid* was the first art game to combine highbrow ambition with rock-solid gameplay. Like most pioneering works, it's largely about its own medium, appropriating the inexorable left-to-right movement and damsel-in-distress story of a certain famous gaming icon and using it as a metaphor for...life? Guilt? L'amour fou? *Braid* doesn't answer all the questions it raises, and that's a good thing. Better still is how elegantly the story and the game mechanics work together, with time-reversing levels exploring remorse and single-key puzzles as metaphors for loss. Like the games it parodies, *Braid* makes walking and jumping feel great, but it uses that visceral satisfaction to draw you into something profoundly disquieting. *McKleinfeld*

7. *Portal 2* (2011). It's one thing to outthink a psychopathic computer program, as players did in the original *Portal*. But this brilliant sequel took things leaps and bounds beyond by asking players to outthink *one another*. In a co-op mode to rival all others, players were forced to work together, but never punished for betraying each other instead. In a meta move, the real cleverness wasn't in the exponentially more complex puzzles, but in the way it asked players to trust in that Charlie Brown-like way that their friends wouldn't infuriatingly, comically sabotage them at the last second. Shooting your friends was simple; trapping them in an infinite, head-spinning loop was impressive. *Riccio*

6. *Half-Life 2* (2004). The original *Half-Life* redefined the way players experienced first-person shooters with heavily scripted sequences and a well-written narrative. *Half-Life 2* took this to the next level, as silent protagonist Gordon Freeman is removed from cryostasis and plunged into a future dystopia—a formerly human-populated city now turned zombie nightmare—reminiscent of Nazi Germany where the last remaining humans reside, enslaved by an unstoppable alien threat. Without ever relying on cutscenes, the game makes you a first-person participant in its storyline, one that turns the tide from oppression to rebellion fighting for the future of humanity. It's a classic whose thrills best those of most action movies and demonstrates the remarkable innovation the medium is capable of. *Aston*

5. *Shadow of the Colossus* (2005). The death of a colossus is a terrible thing. It feels all wrong: You thrust your sword into the softness of a great beast's neck as instructed until it lurches forward and falls. The only thing you're asked to do in *Shadow of the Colossus* is extinguish 16 impossibly beautiful creatures. There are no hazards, or enemies, or side quests. There are no power-ups or upgrades to be found. There is only you, the colossi, and the suffering you inflict upon them. Every video game is founded on a pretense of control—an illusion that you have a choice. *Shadow of the Colossus* dispels the myth by posing a simple question: Why? We should all think hard about the answer. *Marsh*

4. *Red Dead Redemption* (2010). A true western can't be afraid to back down from its gritty substance, and *Red Dead Redemption*'s final, unwinnable mission lives up to consequences often promised by the grim story. But that semi-tragic ending is earned by the plausibility of its rich open world, which is filled not just with outlaws to shoot, but also with cattle to herd and tame, animals to hunt, trains to rob (or protect), and townsfolk with whom you fight, drink, and gamble. But perhaps the grandest accomplishment was the sheer beauty of the territory, such that stumbling upon a rare sunset-lit vista while hunting for buried treasure was often reward enough. *Riccio*

3. *Super Metroid* (1994). Perfection in game design is like pornography: You know it when you see it. And in *Super Metroid*, it's plain as day. It isn't exaggeration to say that every element of the game has been conceived and calibrated to something like a platonic ideal: its level design feels complex but comprehensible; its difficulty is precisely balanced; its controls are as smooth as buttercream; and, perhaps most crucially, its sense of atmosphere is richly palpable. The greatness of *Super Metroid* is apparent from the moment Samus Aran floats up from within her Gunship to stand poised and ready in the rain. It's achingly beautiful. This is game craft at the height of elegance. *Marsh*

2. *Chrono Trigger* (1995). *Chrono Trigger* is the easiest, conversation-ending answer to the question, "Why do you like RPGs?" It's in the wonderfully written, infinitely endearing characters that are the best examples of each of their archetypes. The great, smart-alecky humor balanced with the impending doom waiting in 1999. The twists and turns in the plot, few, if any, of which are telegraphed from miles away. The consequences of your actions across the multiple timelines. The combat. The lack of random encounters. The score. That Mode 7 clock at the start that still feels like the beginning of something epic 20 years later. This is every JRPG element working in total harmony. *Clark*

1. *The Legend of Zelda: The Ocarina of Time* (1998). During the lengthy, groundbreaking development of *The Legend of Zelda: Ocarina of Time*, Shigeru Miyamoto envisioned a worst-case scenario in which Link would be restricted to Ganon's castle throughout the game's entirety, jumping through portals to enter mission-based worlds a la *Super Mario 64*. Let us be eternally grateful, then, that Miyamoto-sensei and his colleagues got a handle on their newly broken-in hardware before submitting their final product. There aren't enough superlatives, in any language, to describe how important *Ocarina of Time* is, not only to the medium of video games, but to the act of telling and being enveloped by stories. You start the game as a child, and finish it as an adult, having traveled countless miles, meeting all sorts of different creatures, both familiar and foreign, and being tested in battle and by a slew of imaginative puzzles. The Great Deku Tree. Dodongo's Cavern. Jabu Jabu's Belly. The Water Temple (oh God, the Water Temple). Your premier foray into any of these environments isn't easily forgotten, and the dungeons comprise only a fraction of the fantastical pleasures found in *Ocarina of Time*, a game that's not just a game, but the birth of a memory that will be held dear for eternity. *LeChevallier*

Stupid Bro Country reflection on local culture. (2015-07-31 14:06)

The pickup pulls at county fairs. But as someone who grew up loving and being forever affected by the true greats of country music, I simply have to offer up this plea to the Nashville country music industry to reclaim the identity and poetic greatness that once was our format. The well-written poetic word of the country song has disappeared. There appears to be not even the slightest attempt to "say" anything other than to repeat the tired, overused mantra of redneck party boy in his truck, partying in said truck, hoping to get lucky in the cab of said truck, and his greatest possible achievement in life is to continue to be physically and emotionally attached to the aforementioned truck as all things in life should and must take place in his, you guessed it...truck. I didn't mind the first two or three hundred versions of these gems but I think we can all agree by now that everything's been said about a redneck and his truck, that can possibly be said. It is time to move on to the next subject. Any subject, anything at all. Our beautiful, time-honored genre, has devolved from lines like, "I'd trade all of my tomorrows for one single yesterday ... holding Bobby's body next to mine," and "a canvas covered cabin, in a crowded labor camp stand out in this memory I revive. Cause my Daddy raised a family there with two hard working hands....and tried to feed my Momma's hungry eyes," down to

"Can I get a Yee Haw?" And the aforementioned Truck! "Come on slide them jeans on up in my truck! Let's get down and dirty in muh truck, doggone it I just get off riding in muh truck, I love ya honey, but not as much as muh truck!" Oh and we can't leave out the beautiful prose about partying in a field or pasture. Now I'm not saying all songs should be somber ballads or about heavy, profound emotional subject matter. On the contrary, great fun, rockin', party songs, describing the lifestyle of blue collar country folk have always been a staple of the genre. But compare for a minute the poetic, "middle American Shakespeare" infused lyrical prose of classics like Hank Williams' "Jambalaya" or Hank Jr's "All My Rowdy friends are coming over tonight" or Garth Brooks' "I've got friends in Low Places" or his "Ain't going down till the sun comes up" to the likes of contemporary offerings like "That's My Kinda Night," or any of the other 300 plus songs from recent years that say the exact same thing in pretty much the exact same way. It's like comparing a Rolls Royce to a ten speed. Finally, I'm not pointing a finger at the artists and especially not the songwriters. They're simply doing what they have to do to make a living. It's the major label execs, the movers and shakers, the folks who control what is shoved down radio's throat, that I am calling out. They have the power and ability to make a commitment to make records that keep the legacy of country music alive, and reclaim a great genre's identity. Who knows? Some of these Bro' Country guys could actually be awesome singers with potential to be great artists! But we'll never know, as long as they're encouraged by the industry to continue being redneck flavors of the day. Now you know why I listen to rock music or something else.

unidentified radio bursts from space (2015-08-04 10:57)

Scientists analyzing radio bursts from space have discovered a strange pattern that suggests the signals may be of an artificial nature. Some scientists have been open to the idea that the radio signals are a possible extraterrestrial beacon, and this new data does not rule out that possibility.

In a paper posted on the Cornell University Library website, Michael Hippke of the Institute for Data Analysis in Neukirchen-Vluyn, Germany, and John Learned at the University of Hawaii in Manoa discovered that the dispersion measures of the signals are multiples of the number: 187.5.

✖ Table from the FRB paper showing information on their dispersion measures, who found them, when and at which telescope. (Credit: Michael Hippke, John Learned, and Wilfried Domainko)

What does that mean? Well, from what I understand, scientist use the dispersion measure to help them figure out how far a signal came from. Higher frequencies travel faster than lower ones, so by measuring the difference in time the frequencies of the signal are received- the dispersion measure - they can get an idea of the distance traveled.

In this case, the dispersion measures seem to indicate an artificial origin. Hippke and Learned write: "We estimate the likelihood of a coincidence as 5:10,000."

"If the pattern is real," Learned told New Scientist, "it is very, very hard to explain."

The signals in question are called fast radio bursts (FRBs), and have been recorded since 2001. Only one, in 2014, was detected real-time as it happened. The others were discovered by sifting through recorded data from telescopes. There have now been 11 FSBs recorded in total.

✖ Duncan Lorimer, Professor of Physics and Astronomy, West Virginia University. (Credit: West Virginia University)

In a recent Huffington Post blog by Seth Shostak, senior astronomer for the Search for Extraterrestrial Intelligence (SETI) Institute, he explains that it was sifting through data from telescopes that lead to the discovery of the FRBs in 2007. Shostak says that Duncan Lorimer discovered the brief "flashes" of radio energy using a telescope in Australia.

According to former director of the SETI Institute Jill Tarter, “beacon from extraterrestrials” has always been considered one of the weird possibilities for the origins of the FRBs.

Tarter told New Scientist, “These have been intriguing as an engineered signal, or evidence of extraterrestrial technology, since [they] first [were] discovered.”

In an FAQ on the signals posted on New Scientist, they point out that there are many possible natural origins of radio signals from space. However, they also note that the possible natural sources “don’t account for the fast radio bursts’ pattern according to any physics we know now.”

In the conclusion to their paper, Learned and Hippke write that if the natural sources are ruled out, “an artificial source (human or non-human) must be considered.”

Hippke tells the New Scientist, “there is something really interesting we need to understand. This will either be new physics, like a new kind of pulsar, or, in the end, if we can exclude everything else, an ET.”

“When you set out to search for something new,” he says, “you might find something unexpected.”

However, Shostak points out in his blog, there is one more thing we need to rule out before jumping on the ET band wagon. He writes, “In the case of the FRBs, one possible explanation — still not ruled out — is positively prosaic: They could be some type of man-made interference that only seems to be coming from deep space.”

The New Scientist article also speculates that there may still be terrestrial answers. They write, “It’s also possible that the telescopes are picking up evidence of human technology, like an unmapped spy satellite, masquerading as signals from deep space.”

 The Parkes radio telescope in Australia. All but one of the 11 FRB signals was recorded using this telescope.

A recent update to the paper written by Hippke and Learned adds research that provides further evidence that the FRBs may be of terrestrial origin. The update was posted on March 30, and includes the addition of Wilfried Domainko of the Max Planck Institute for Nuclear Physics to the research team.

The update includes the discovery that the signals may arrive at times that align with UTC time. According to the paper, “the suggestive correlation with terrestrial time standards seems to nearly clinch the case for human association of these peculiar phenomena.”

So are the signals ET or human? It will take further research, and the discovery of more FRBs to verify. The new FRBs may or may not fit the dispersion measure patterns or align with UTC times. Perhaps some other feature to the FRBs will come to light giving scientists more information to go on.

Until more is discovered, we just don’t know.

The final sentence in the FRB research paper says, “In the end we only claim interesting features which further data will verify or refute.”

Meanwhile, Shostak warns, “It’s always tempting to invoke dramatic explanations for novel phenomena — after all, that makes them both more interesting and more important. But history suggests that caution is a good idea, and more likely to be justified in the end.”

Linux Mint 17.2 review (2015-08-09 11:09)

92

1 Jul 2015 at 19:19, Scott Gilbertson

Review The underlying packages in Linux Mint 17.2, just released, are largely unchanged. What you *will* find are a lot of improvements and added polish in everyday tools like the update manager, login screen and the Software Sources app.

Sticking with the Ubuntu 14.04 base has given Linux Mint developers the opportunity to focus their time and effort on the aspects of Mint that make it unique. Much of that focus has been on the project's two desktops, Cinnamon and MATE. Indeed it's the updates to both desktops that make Linux Mint 17.2 well worth the upgrade.

Mint seems to be one of the few distros to have taken the idea of "if it ain't broke, don't fix it" to heart, with the result that it's fast becoming one of the most popular distros.

Part of the reason for that popularity lies in its excellent desktops, the stripped down, GNOME 2.x-inspired MATE, and the somewhat fancier – but still traditional – desktop, Cinnamon. Both of Mint's primary desktops stick with the traditional desktop paradigm – taskbar-like panels with applets, a start menu and system tray – making them popular with users not interested in "modern" desktops like Unity and GNOME Shell.

Both Cinnamon and MATE have seen major updates in Mint 17.2.

The Cinnamon version of Mint 17.2 ships with the brand-new Cinnamon 2.6 major update that builds on the previous release while adding improved support for dual monitors and better panels. It also sees some speed improvements that will make your desktop experience a bit snappier.

The Cinnamon 2.6 desktop in the new Mint

In recent months Cinnamon has proved something more than just a Linux Mint desktop. It's now available in half a dozen distros and, while Mint is still the only distro to use it by default, Fedora and Debian have added Cinnamon to their installers. For a complete look at everything that's new in Cinnamon 2.6, see my earlier review.

Cinnamon 2.6 in Mint 17.2 manages to offer a desktop experience that's both familiar and yet feels modern.

Linux Mint's other desktop, MATE, has also been the focus of numerous updates and improvements this time around. Mint 17.2 ships with MATE 1.10, which is notable for its speed and memory use improvements, most of which come out of a code analysis designed to track down and fix the problems. MATE has always been a lightweight, snappy desktop and I didn't notice much of a speed improvement, but it did use slightly less RAM in my tests.

Another nice change is a new audio library by the name of libmatemixer. You might not notice it overtly, but it does mean MATE can now take full advantage of mixer functionality and will automatically detect and support PulseAudio, ALSA and OSS.

MATE has a few other minor improvements, like the ability to enable or disable extensions in Caja (the default file manager in MATE) at runtime (no need to restart MATE for changes to take effect). The help and documentation tools are now available within the desktop and Linux Mint has started a "papercut" project for MATE designed to fix many small issues and port some of the Cinnamon new features into MATE. The results of that project should start

to trickle in with point updates as the 17.2 release cycle progresses.

There are also some improvements in this release to Mint-specific tools that are used in both desktops, like the Update Manager and Login Screen.

Mint 17.2 continues to improve the already very nice, and surprisingly readable, Update Manager. This release adds support for package aliases, which means, for example, that a package like "muffin" can be displayed as "cinnamon-muffin" so it appears alongside other Cinnamon updates. This makes it easier to scan through your updates and see what's happening to various aspects of the system all in one spot. Even if you don't bother to read up on what "muffin" does, at least you know it's part of Cinnamon, and if the desktop suddenly starts acting wonky after an update you know where to start troubleshooting.

Linux Mint 17.2 MATE looks more like Cinnamon every day

There's also a new apt command available in this release, "apt recommends", which will show you all the missing recommended packages for a particular package. For example, if you want to install Calibre, you'd type "apt recommends calibre" to see what else you'll need to install.

Another nice little change is the ability to hide the Update Manager system tray icon when no updates are available, if, perchance, this bothers you the way it did me.

The related Software Sources configuration tool has a new feature that lets you open PPA archives and browse their packages. You no longer need to switch to another tool to install what you were looking for.

Software Sources also now has a tool to list "foreign packages" and to downgrade them. What Mint refers to as a "foreign package" is a package where the origin or version is unknown and that doesn't match what is available in repositories known by your operation system. In other words you downloaded and installed something. It's now much easier to purge these packages from your system and to roll back to older versions. For example, if you enable Mint's testing repos to experiment with something and then change your mind, it's much easier to go back to what you had.

While the base package system remains Ubuntu 14.04, there are some application updates – LibreOffice 4.4.3 and Inkscape .91. For more on what's new in the Inkscape update, see my full Inkscape review. One thing you won't find here is systemd, though your reprieve is short-lived since that will be coming when Mint updates to 16.04 as a base

next year.

Among the changes in Cinnamon 2.6, you can now move the taskbar-style panel – or add another for each additional monitor

There are numerous minor improvements to tools like the USB Writer, support for a larger number of HP printers, improved bash command completion and some improvements to the login manager. And, of course, Mint 17.2 features the usual slew of wallpaper updates.

Mint has historically had a rocky upgrade process. It's almost always been easier to do a clean install of the system than to try to upgrade from, say, Mint 16 to 17. In Mint's defense, a clean install is always the safer way to upgrade a system – and another reason to have a separate partition for /home – but it did make upgrading a pain.

Thankfully this is not the case with Mint 17.2 because the underlying packages from Ubuntu have not changed. You can update to Mint 17.2 directly from Update Manager. That will continue to be true for the rest of the 17.x release cycle (which will last through Ubuntu 16.04, due in April 2016).

And indeed you should upgrade. Given that it's easy and painless to update, combined with all the improvements in this release, Linux Mint 17.2 is well worth it. This is exactly the kind of user-focused release that solves small, everyday problems while leaving the rest of the system alone. ®

New studies support the possibility of sea life on Enceladus (2015-08-13 10:56)

NASA's Cassini spacecraft spotted geysers on the surface of Saturn's moon Enceladus ten years ago. And new research suggests that these geysers are caused by active hydrothermal vents at the bottom of the moon's ice-covered sea-vents that potentially warm the water to a temperature that could sustain life.

Artist's impression of Cassini in orbit around Saturn. (Credit: NASA)

After the geysers were spotted, researchers were able to determine that water ice was being spewed by these geysers. Then, using the Cosmic Dust Analyzer aboard Cassini, scientists concluded that the geyser spray contains ice crystals and fine silica dust. Recent tests reveal that the only way these fine rock particles can form is through a mineral interaction with alkaline water at a temperature of at least 194 degrees Fahrenheit, which also has a salinity of four percent or less. NBC News space writer Alan Boyle points out, "Those just happen to be the conditions that exist at a field of hydrothermal vents on the bottom of the Atlantic Ocean, known as the Lost City, where volcanically heated water makes it possible for weird types of life to survive in a sunless ecosystem."

Although other processes could explain the geysers observed by Cassini, scientists believe Earthlike volcanic vents are the best explanation. And scientists note that this is the first time active hydrothermal vents have been seen outside of Earth's seafloor.

 Illustration showing geysers on Enceladus. (Credit: NASA/JPL-Caltech/Space Science Institute)

Boyle explains, "The latest findings support the view that Enceladus has the 'Big Three' requirements needed for life on Earth: liquid water, the chemical building blocks for organic activity, and an energy source in the form of hydrothermal heat."

Scientists are excited for future missions to Enceladus to better determine if the moon's sea does, indeed, harbor life. Cassini will sample the moon's water plumes again in October. But, unfortunately, the spacecraft doesn't have the necessary instruments to detect life. And, it will likely be a while before any subsequent mission to Enceladus is realized. NASA's priority is Jupiter's moon Europa—another moon that may be home to extraterrestrial life.

Wii U is like Sega Saturn or Sega CD (2015-08-15 18:03)

The Sega Saturn was released in 1995 in the US resulted in never released clever Japanese SHMUPS (DoDonPachi, Radiant Silvergun, Battle Garrega, Terra Driver, Batsugun), Dragon Force and Panzer Dragoon Saga (best games) were very pricey. Another reason Saturn died early was the 3D graphics were horrible. The Wii U does have a Legend of Zelda (Wind Waker HD), Super Mario Bros. (Super Mario 3D World) and Mario Kart (Mario Kart 8) compatible with the Wiimote and Nunchuck. Even though it comes packed with the gamepad, the Wiimote still is compatible with all the games. The Nintendo NX will be more powerful and hopefully will copy the Xbox 360 controller. I think only 25 games came out for Wii U so it looks a lot like Sega CD. I read articles that the new Legend of Zelda game would come out for Wii U and next generation 'Nintendo NX'. The biggest budget game next year is Final Fantasy XV, as well as Uncharted 4 on ps4.

Go ahead, end birthright American citizenship. (2015-08-26 11:52)

Currently, the United States grants citizenship automatically to every person born on our soil—including children of legal noncitizens, tourists, and even illegal immigrants. (Children of foreign diplomats are the exception.) The U.S. has so-called birthright citizenship because the Constitution's 14th Amendment, ratified in 1868, says citizenship must be granted to "all persons born or naturalized in the United States, and subject to the jurisdiction thereof." I argue that "subject to the jurisdiction thereof" does not include illegal immigrants, and I'm not alone. One of the Amendment's authors, Senator Jacob Howard of Michigan, said it "will not, of course, include persons born in the United States who are foreigners, aliens..." Aside from any constitutional arguments, I believe giving citizenship based merely on where you are born is bad public policy. Citizenship is about more than that; it is about our proud history, common standards, and willingness to uphold these ideals. What message does granting citizenship to the children of illegal immigrants send to people waiting to get into the U.S. legally? Foreigners who want to become citizens can wait as long as 18 years. Once someone crosses our borders illegally and gives birth to a child, their entire family is able to cut in line,

degrading the legitimacy of our immigration system. Almost no other country in the world offers birthright citizenship for these reasons. Lawbreakers should not be rewarded through the destructive policy of birthright citizenship. Yep, deport any of the anchor babies.

High Energy Liquid Laser Area Defense System field testing (2015-09-06 10:27)

Enemy surface-to-air threats to manned and unmanned aircraft have become increasingly sophisticated, creating a need for rapid and effective response to this growing category of threats. High power lasers can provide a solution to this challenge, as they harness the speed and power of light to counter multiple threats. Laser weapon systems provide additional capability for offensive missions as well—adding precise targeting with low probability of collateral damage. For consideration as a weapon system on today's air assets though, these laser weapon systems must be lighter and more compact than the state-of-the-art has produced. The goal of the HELLADS program is to develop a 150 kilowatt (kW) laser weapon system that is ten times smaller and lighter than current lasers of similar power, enabling integration onto tactical aircraft to defend against and defeat ground threats. With a weight goal of less than five kilograms per kilowatt, and volume of three cubic meters for the laser system, HELLADS seeks to enable high-energy lasers to be integrated onto tactical aircraft, significantly increasing engagement ranges compared to ground-based systems. In May 2015, HELLADS demonstrated sufficient laser power and beam quality to advance to a series of field tests. The achievement of government acceptance for field trials marked the end of the program's laboratory development phase and the beginning of a new and challenging set of tests against rockets, mortars, vehicles and surrogate surface-to-air missiles at White Sands Missile Range, New Mexico. Ground-based field testing of the HELLADS laser is expected to begin in summer 2015 as an effort jointly funded by DARPA and the Air Force Research Laboratory. Following the field-testing phase, the goal is to make the system available to the military Services for further refinement, testing or transition to operational use.

I hate Gamestop, Gamestop really is agnorant (2015-09-15 16:42)

My parents came to my house and said I have 300 games over what I should have. That doesn't bother me. What bothers me is that Game Stop lies about console sales. The Internet says Wii U is dead, and Game Stop clerks says Wii U is increasing sales and thier best month was August. I hope Game Stop goes out of business. They lie, their used games are too expensive, and the Internet bandwidth caps prevent me from downloading online over 5 gb). So of course I walked out without buying any videogame. I love The Videogame Critic.

The video game industry is maturing—fast. The average age of a “gamer,” that is, someone who plays video games on a regular basis, is now 37, according to the Entertainment Software Association, an industry trade group. That's up from last year, when the average came in at around 35 years old.

Surprised? Don't be. After all, these “greying gamers” were the first generation to grow up with video games as children. As they've aged, many apparently kept on playing, delving even deeper into the gaming abyss through consoles, PCs, and now their mobile devices.

If you care to see this older, dare I say, more “refined” sort of gamer, then make your way out west this week to this year's E3 Electronic Entertainment Expo in Los Angeles, the gaming industry's biggest trade show. There you will see plenty of Gen X'ers and Gen Y'ers (is that still a thing?) milling about, many sporting unkempt beards and ironic t-shirts like it's 2007. Apparently, shaving and adhering to current fashion norms takes way too much time and effort, time away from Assassin's Creed 32, or some other “new” iteration of a once popular gaming title.

But this older generation of gamers is both a blessing and a curse for the industry. It is a blessing in that as they age, their pockets get deeper, so they potentially have more money to spend on their hobby (assuming they don't get married and have kids, which, unsurprisingly, many don't). But it is also a curse, because the industry seems stuck in a time warp.

Simply put, content makers, many of whom are greying gamers themselves, have become lazy. They have failed to innovate on both the hardware and content side of the business, alienating potential young consumers while angering older gamers who crave something newer than just another Call of Duty. Each new game “unveiled” this week in Los Angeles will almost undoubtedly be a mashup of characters and scenes derived from popular movie franchises that debuted in the late 1990s and early 2000s, such as The Matrix, Starship Troopers, The Terminator, Sailor Moon, and The Hobbit, with a dash of The Fast and the Furious thrown in for good measure. It is getting old.

The result of all this nostalgic and creative laziness is a shrinking market. Video game sales in the U.S. actually peaked in 2010, at \$17 billion, and have fallen progressively ever since, hitting just \$15.4 billion in 2014, according to NPD Group. This is expected to continue unless the industry finds a new life source, and fast.

To be sure, this drop-off isn't just because younger people don't watch TV or because they are Snapchatting or whatever all day on their mobile phones. They aren't interested because the content doesn't speak to them. While mobile is the “fastest” growing segment of the industry, it is inherently backwards looking given the technological and ergonomic constraints of the market. Either the games have to be terribly simple (and forgettable), like Candy Crush, or they have to be stripped down (worse) versions of console games.

But the industry feels compelled to “capture” this market nonetheless, diverting precious resources that would be better spent advancing the core gaming market. For example, on Sunday evening, Bethesda Game Studios, a major game developer, showed off its newest iteration of its popular “Fallout” series, Fallout 4, but also revealed a new Fallout mobile game, ostensibly to “capture” the yet unnamed generation of kids today. Todd Howard, director of Bethesda Gaming, said the mobile Fallout version was “inspired by games we love going back 30 years,” and that gamers will see inspirations from older retro games like X-com, SimCity, and FTL, which are, “games we really really like.” I think that says it all.

As the show rolls on this week, it would be nice to see some real innovation in the core gaming product, as well as some fresh content aimed at a younger subset of the population. Virtual reality (VR) has been talked about for years,

but we have yet to see it come to market. Oculus now says its consumer VR product will be out by the first quarter of next year, and Valve and HTC say their VR console will be ready for this year's holiday season.

If true, then the industry needs to start building content for this new and potentially "game changing" platform as quickly as possible. And no, that doesn't mean shoehorning current games to just simply "work" on a VR platform. It means building new games from the ground up, specifically tailored for the virtual reality experience. If the content fails to wow consumers, then they won't pay hundreds of dollars to acquire a VR system, which means VR will die a quick death, just as it did in the 1990s.

So, given all that, what's on tap for Monday at E3? Microsoft kicks things off at noon (Eastern Time), followed by EA and Ubisoft later in the day. Sony will have its flashy press conference this evening around 8:30pm ET while Nintendo will have theirs tomorrow at noon, which is actually official first day of the conference. *Fortune* will have people on the ground, so look out for news briefs throughout the day.

Yang-Mills existence and mass gap solved (2015-09-18 14:09)

RSA & Diffie-Hellman proves P does not equal NP (2015-09-18 14:29)

Vinay Deolalikar, a mathematician who works for HP Labs, claims to have proven that P is not equal to NP. The problem is the greatest unsolved problem in theoretical computer science and is one of seven problems in which the Clay Mathematics Institute has offered million dollar prizes to the solutions. The question of whether P equals NP essentially asks whether there exist problems which take a long time to solve but whose solutions can be checked quickly. More formally, a problem is said to be in P if there is a program for a Turing machine, an ideal theoretical computer with unbounded amounts of memory, such that running instances of the problem through the program will always answer the question in polynomial time — time always bounded by some fixed polynomial power of the length of the input. A problem is said to be in NP, if the problem can be solved in polynomial time when instead of being run on a Turing machine, it is run on a non-deterministic Turing machine, which is like a Turing machine but is able to make copies of itself to try different approaches to the problem simultaneously. Mathematicians have long believed that

Vinay Deolalikar, a mathematician who works for HP Labs, claims to have proven that P is not equal to NP. The problem is the greatest unsolved problem in theoretical computer science and is one of seven problems in which the Clay Mathematics Institute has offered million dollar prizes to the solutions. The question of whether P equals NP essentially asks whether there exist problems which take a long time to solve but whose solutions can be checked quickly. More formally, a problem is said to be in P if there is a program for a Turing machine, an ideal theoretical computer with unbounded amounts of memory, such that running instances of the problem through the program will always answer the question in polynomial time — time always bounded by some fixed polynomial power of the length of the input. A problem is said to be in NP, if the problem can be solved in polynomial time when instead of being run on a Turing machine, it is run on a non-deterministic Turing machine, which is like a Turing machine but is able to make copies of itself to try different approaches to the problem simultaneously. Mathematicians have long believed that P does not equal NP, and the question has many practical implications. Much of modern cryptography, such as the RSA

algorithm and the Diffie-Hellman algorithm, rests on certain problems, such as factoring integers, being in NP and not in P. If it turned out that $P=NP$, these methods would not work but many now difficult problems would likely be easy to solve. If P does not equal NP then many natural, practical problems such as the traveling salesman problem are intrinsically difficult. In 2000, the Clay Foundation listed the "Clay Millenium Problems," seven mathematical problems each of which they would offer a million dollars for a correct solution. One of these problems was whether P equaled NP. Another of these seven, the Poincaré conjecture, was solved in 2002 by Grigori Perelman who first made headlines for solving the problem and then made them again months later for refusing to take the prize money. On August 7, mathematician Greg Baker noted on his blog that he had seen a draft of a claimed proof by Deolalikar although among experts a draft had apparently been circulating for a few days. Deolalikar's proof works by connecting certain ideas in computer science and finite model theory to ideas in statistical mechanics. The proof works by showing that if certain problems known to be in NP were also in P then those problems would have impossible statistical properties. Computer scientists and mathematicians have expressed a variety of opinions about Deolalikar's proof, ranging from guarded optimism to near certainty that the proof is incorrect. Scott Aaronson of the Massachusetts Institute of Technology has expressed his pessimism by stating that he will give \$200,000 of his own money to Deolalikar if the proof turns out to be valid. Others have raised specific technical issues with the proof but noted that the proof attempt presented interesting new techniques that might be relevant to computer science whether or not the proof turns out to be correct. Richard Lipton, a professor of computer science at Georgia Tech, has said that "the author certainly shows awareness of the relevant obstacles and command of literature supporting his arguments." Lipton has listed four central objections to the proof, none of which are necessarily fatal but may require more work to address. On August 11, 2010, Lipton reported that consensus of the reviewers was best summarized by mathematician Terence Tao, who expressed the view that Deolalikar's paper probably did not give a proof that $P \neq NP$ even after major changes, unless substantial new ideas are added., and the question has many practical implications. Much of modern cryptography, such as the RSA algorithm and the Diffie-Hellman algorithm, rests on certain problems, such as factoring integers, being in NP and not in P. If it turned out that $P=NP$, these methods would not work but many now difficult problems would likely be easy to solve. PS4 exceeds expectations. (2015-10-01 10:19)

Shuhei Yoshida, Sony's head of worldwide studios for PlayStation, has said that his team has been surprised by the success of the PlayStation 4, with the machine well exceeding internal sales predictions, and continuing to do so. Yoshida explained that the number of PS4s in the hands of consumers is around two million more than his department predicted, and that this success has forced them to re-evaluate the resource provision for online first party games like DriveClub.

"DriveClub has sustained its momentum," the executive explained. "They needed to spend time to really rewrite the server-side of the game. We weren't expecting this many people would buy a PlayStation 4, and have PlayStation Plus membership. Because the title was originally titled for the launch of the system, the number of potential people to download for free for the PS Plus version would be much smaller than two years after the launch. We realised the daunting task of supporting potentially millions and millions of people to download and play. The team needed to go back to the drawing board and re-engineer the server-side.

"While they were doing this, they kept releasing new content and people continued to play the game and enjoy it. I'm really happy with how things went forward.

"We had a specific target," said Yoshida of the platform itself. "5 million units - against what we did, 7 million I think, and it just kept going. We had more modest projections before the launch."

As well as the unexpected load on the servers DriveClub, Yoshida says that the PS4's success at retail has also put Sony's first-party line-up in something of an unfavourable light, because its ubiquity has made third-parties more prolific, making Sony's home field line-up seem a little anemic in comparison.

"Typically - it's ironic in a sense, when a platform's doing really well, studio side kind of struggles," Yoshida believes.

"It probably has some relationship to these two things. When a platform's doing well, third-parties support it more. So from a pure software standpoint, there'll be more competition. When the platform's not doing so well, our games become more prominent, and we get larger market share within the same platform. Because we continue to support the PS3, in the launch year of the PS4 we had The Last of Us and Gran Turismo 6 and Beyond and so on, many games, we were still working hard. We're just head-down, focussed on delivering the games for the near future. We're happy with how it's going, and we're excited about welcoming PlayStation VR. From a delivering games standpoint, we have work to do. People constantly ask us for the big exclusive triple-A games."

Although there might not be a great deal on the slate on Sony's software side, Yoshida is optimistic about the forthcoming launch of the newly re-monikered PlayStation VR, something which he sees as akin to the launch of a new platform.

"It's like launching a new platform, and it's a huge effort, and it's super-exciting. As far as VR, for the future, is concerned, I have no question that in a few years everyone will be using some VR tech as a part of their lives. Even outside entertainment systems. It's a new tech, it's a new media. How well PlayStation VR will do in that trajectory is a big question. We believe we have a unique position in this effort. I always say we're not just competing with the other companies like Oculus or Valve. We are almost collaborating to make this thing happen, and get people to try and get excited and talk about it to other people. Because we're focussed on delivering the VR experience on the game console as opposed to PC or mobile, and that's their focus, we're covering all the bases together.

"In that, it's just how well we deliver the system, how easy it is to use, how comfortable, how exciting the contents are, the price point is right for the consumer - all these things, it's our effort, so I hope PlayStation VR will do extremely well. As a developer, I'm super-excited about the potential of using VR tech. I feel like, working on PlayStation VR, is like when we were working on the original PlayStation 20 years ago, when we were very excited to use 3D real-time graphics for the games. After 20 years, we're still making even bigger, better 3D games, so I see a long-term great future for VR entertainment for the coming 20 years.

"As PlayStation, we're always gaming focussed. But you know that lots of people use PlayStation for non-games, like consuming entertainment, streaming... So we believe the same for PlayStation VR. The people who know PlayStation as a great entertainment system, a gaming system, and enjoying video contents as well. In the same way, because it's such a new thing, VR, most people, for the first time really try the modern VR, so instead of putting some exotic

names for that, we believe that it's better to associate with PlayStation brand that people know as a fun product."

Illegal Immigration Affects Electoral Votes (2015-10-04 20:45)

Amid lipstick smears and distortions from both presidential candidates, a forgotten issue that was once the biggest concern of this election cycle has largely faded from public consciousness: illegal immigration.

If John McCain really wants to distance himself from Barack Obama in the polls, it will require yet another Maverick flip-flop. His newfound stance on illegal immigration could help rally the conservative base and have a direct impact on this and future elections.

Aside from the burdens posed by illegal immigrants on crime, detention facilities, job security, taxes, wages, social security, medicare, Medicaid, violence, terrorism and drug and human trafficking, illegal aliens are slowly eroding the power of American voters.

Though illegal immigrants don't have an effect on the popular vote, they are changing the electoral vote, and this change benefits Obama.

Hispanic voters historically vote Democratic, and as reported by USA Today in July, Hispanics will become decisive swing votes in future elections.

With the Hispanic population set to double to 30 percent by 2042 because of relatively higher birth rates and immigration and with leaders like Obama and McCain who support amnesty for illegal aliens this traditionally Democratic-leaning population will likely tip future elections in favor of Democrats.

Indeed, the effects of Hispanic voters on this election are already being felt. A Pew Research Center survey showed 66 percent of Hispanics favored Obama to McCain's 23 percent.

USA Today reported the Hispanic vote is now large enough to determine outcomes in key battleground states, like Colorado, New Mexico, Nevada and Florida.

Familial and cultural ties effectively concentrate legal and illegal immigrants together with ethnically similar foreign-born populations. Though this is not the only factor in the redistribution of seats in the House of Representatives, it is a major contributor. And with 70 percent of the foreign-born population living in just six states, the Center for Immigration Studies expects this rearrangement to continue for decades, resulting in changes to the U.S. House of Representatives and Electoral College.

The distribution of seats in the House is referred to as apportionment, which is based on states' total population and includes illegal immigrants. A national census is taken every 10 years to apportion seats in the House, but as CIS reported, the Constitution offers no method for apportionment, nor a method for compiling total population for apportionment. Currently, the resident population includes illegal aliens.

Illegal immigration played a significant role in the redistribution of seats in the past. In 1990, 12 seats were redistributed, and in 2000, 16 seats were redistributed. Louisiana was one of the states adversely affected.

In 2000, four states either lost a seat or didn't gain a seat they otherwise would have, and five states had one seat fewer than it otherwise would have.

Five states actually gained seats because of illegal aliens. Nine redistributed seats went to California alone.

These non-citizens also change the landscape of the electoral map because the Electoral College is based on the size of congressional delegations.

The Federation for Immigration Reform (FAIR), which twice led unsuccessful campaigns to remove illegal immigrants from the process of apportionment, reported the 2004 election benefitted Kerry with a net gain of two Electoral College votes.

Though the results were insignificant in that particular race, the reapportionment of seats caused by illegal aliens has affected the past two presidential elections and will continue to do so in the future.

This doesn't mean illegal aliens are the winners. Voters living in high-immigration districts consequently have much more influence than those living in low-immigration districts. Because they play no part in political life, illegals are being exploited to increase the power of voters living in high-immigration districts. This unfairly shifts seats from states all over the country to states mostly found in the Southwest.

CIS contends that reapportionment is a zero-sum game and concludes that excluding illegal immigrants from apportionment is highly unlikely because of opposition from states that benefit politically from illegal immigration. The only solution appears to be the enforcement of stronger illegal immigration regulations. As far as apportionment reform is concerned, that duty might fall into the hands of the aforementioned swing voters of the future. A wise man once said, People get the government they deserve. I say, People deserve the government they tolerate.

President using gun politics emotion. even though 2nd admendment constitution protection (2015-10-06 19:59)

In his speech on the Umpqua Community College shooting in Oregon last week, President Obama sounded more upset about America's gun laws than about the horrific massacre.

We barely had the preliminary facts about the shooting, the shooter and the victims, and he was already lecturing the nation again on gun control.

Instead of calling the nation to prayer, he said we would learn about the victims in the coming days and then "wrap everyone who's grieving with our prayers and our love." Those words out of the way, he immediately pivoted to complaining that "our thoughts and prayers are not enough. It's not enough. It does not capture the heartache and grief and anger that we should feel (or) prevent this carnage from being inflicted someplace else in America – next week or a couple of months from now."

We didn't hear much "heartache and grief" in his speech, but his anger was palpable. It wasn't anger at the shooter, and it wasn't sympathy for the victims. It was outrage – or apparent outrage – at America's Second Amendment advocates.

"We are the only advanced country on earth," said Obama, "that sees these kinds of mass shootings every few months. ... The United States ... is the one advanced nation on earth in which we do not have sufficient common-sense gun-safety laws – even in the face of repeated mass killings." He said these events happen so often that they've "become routine. ... We've become numb to this."

He may speak for himself, of course, but I don't know too many people, especially gun rights advocates, who are numb to such savagery. Many of us believe our society would be safer against gun violence if there weren't so many "gun-free" zones and if we had more armed guards.

As he has so often done before the powder is dry after similar incidents, he used his bully pulpit (emphasis on "bully") to misstate statistics as if he were trying for a record number of Pinocchios from fact-checkers.

He said: "We know that states with the most gun laws tend to have the fewest gun deaths. So the notion that gun laws don't work – or just will make it harder for law-abiding citizens, and criminals will still get their guns – is not borne out by the evidence."

What he conveniently omitted is that Oregon had recently strengthened its laws on gun sales and is above average among the states on gun regulation. It is one of only 18 states that require universal background checks before the sale of any firearm.

Being a proud Chicagoan, Obama is surely aware that his beloved city, which has distinguished itself in recent years for epic gun violence and death, is in a state that has some of the strictest gun control laws in the nation. How, then, can he claim that gun laws work? And how would implementing his idea of "common-sense gun-safety laws" make sense?

Though the United States has a high actual number of fatalities from mass shootings given its larger population, Obama ignores that other nations – such as Norway, Finland, Slovakia, Israel and Switzerland, which all have restrictive gun laws – have higher ratios of such shootings per capita.

The president also fails to acknowledge author John Lott's findings as of 2010 that all the multiple-victim public shootings (where three or more were killed) in Western Europe and in the United States occurred where civilians were not allowed to carry guns.

Charles C.W. Cooke, in his "The Conservatarian Manifesto," urges that we regularly debunk "the claim that America is

in the midst of a gun-violence 'epidemic'. ... Two reports, both released in May 2013, revealed a striking drop in gun crime over the past twenty years." Cooke writes that "during the very period that gun laws have been dramatically liberalized across the whole country, gun crime has dropped substantially."

In his rant, Obama didn't just distort the evidence. He effectively accused the Republican Congress of allowing these deaths by opposing gun control laws for political reasons, proving that projection is still an important weapon in his partisan arsenal. At a time when he should be using his office and his influence to urge healing and unity, Obama uses them for strident community organizing to advance his agenda.

It is instructive that Obama rages at conservatives and scapegoats the weapons themselves rather than the criminals involved or the state of the human condition that underlies their actions.

It is remarkable that he demands an unconstitutional and meaningless change in the laws purportedly to save innocent lives but vigorously opposes all laws that would protect innocent babies in the womb.

And it is disgraceful that he seeks to inflame our emotions to seduce us into ignoring the facts and suspending our critical faculties long enough to surrender our vital Second Amendment rights.

Republicans need devising entirely new ways of 'getting things done.' (2015-10-16 20:13)

At first, I didn't have strong feelings about the House Speaker's race. I thought initial front-runner Kevin McCarthy might do a good job. I feel the same about other potential speakers, including Paul Ryan, Daniel Webster, and my good friend Jason Chaffetz.

More than anything, though, it seemed that what mattered was not who the next speaker is but what the next speaker does. I shared my thoughts with the handful of House colleagues who asked for them, but, as a senator, I didn't feel it was my place to broadcast them.

Then late last week, we saw the Republican establishment's overheated reaction to McCarthy's surprise withdrawal from the race. Then suddenly, over the weekend, many more people started asking my opinions about the race after a New York Times columnist nominated yours truly for the job.

I have no interest in that job, of course. But given this strange new environment, I thought it might now be appropriate

for me to suggest a few lessons conservative reformers can take from the events of the last few weeks, for whatever they are worth.

Lesson 1: Politics Is a Team Sport

This is no original insight, of course. But, as Samuel Johnson said, “People need to be reminded more often than they need to be instructed.”

Usually Republican leaders wield this lesson as a cudgel against conservative back-benchers. But in the last year, anti-establishment conservatives really seem to have learned it. The rapid emergence of the House Freedom Caucus as a driving force within the House Republican Conference is a testament to its members’ vigorous application of this lesson.

‘People need to be reminded more often than they need to be instructed.’

The HFC may not be on the team in the way GOP bosses use the word. But HFC members have demonstrated an ability to be very effective playing on a team.

This seems to me a useful lesson, first, for my friends in the HFC themselves, as they figure out how to translate the negative, veto-type influence they have won into positive reform. But the HFC’s unity is also—or at least should be—a welcome sign for those Republicans now vying to lead the conference. Anti-establishment, Constitution-oriented reformers want very much to belong to and help a Republican Party in which they feel at home. They—that is to say, we—are actually trying to build that new Republican Party every day.

It shouldn’t be all that hard for GOP leaders to figure out how to assist and even guide that project. After all, party leaders work for their back-benchers and voters, not the other way around. The next successful Republican speaker should already know that, without being instructed or reminded.

Lesson 2: Uncertainty Is Good For Us

A handful of commentators—including Yuval Levin and Kevin Williamson of National Review and The Federalist’s David Harsanyi—have already made this point. But it suffices to say that a few days’ uncertainty about who is going to be the next Speaker of the House is not any well-adjusted adult’s definition of chaos. For goodness sake, in the Kosovo parliament last week, opposition members tear-gassed their own colleagues! One congressman’s decision to keep his current job for the time being is not the stuff of “Game of Thrones.”

A few days’ uncertainty about who is going to be the next Speaker of the House is not any well-adjusted adult’s definition of chaos.

There is an additional lesson here for the Right. Extreme discomfort with change and uncertainty is a bipartisan problem today, but Republicans in particular need to quit it with the pearl-clutching and fainting couches. I mean, have you read our platform? If the GOP really intends to unite and succeed in coming years, we’re going to have to deal with challenges much less predictable than a contested leadership election or two.

Good teams, like fighting units, are sharpened—made more disciplined and more daring—by action, after all. Indeed, a taste of bracing uncertainty might finally do for the GOP what millions of dollars in pollster and consultant fees have not.

For if you strip away the political and media attention from McCarthy’s withdrawal, and the ensuing Washington freak-out, all that really happened last week was this: a sure-thing continuation of a tight-knit community’s happy status-quo was upended without notice or comforting contingency. Nobody knew what had happened, or why, or whom to blame, or how to move forward, or what sudden dislocation might come next.

In other words, the Republican establishment got a passing glimpse of what it’s like to be a working family in America today.

Good teams, like fighting units, are sharpened—made more disciplined and more daring—by action.

Washington Republicans would do well to imagine what jarring days like last Thursday are like for people who don’t work in the wealthiest metropolitan area in the country, who cannot expect to rebound from a job loss by doubling their income on K Street. In that context, should we really be surprised that legislative accomplishments like the permanent “doc fix” or Trade Promotion Authority (however laudable they may be) have done little to strengthen our party’s brand this year?

It seems to me that Republicans in Washington—speaker candidates or not, conservatives and moderates—need to think about what kind of policy reforms might more directly empower struggling families to survive and thrive amid uncertainties of their own. From this overdue examination might come more fruitful internal debates and a more

appealing reform agenda.

Getting used to facing and overcoming uncertainty, together, will make a new Republican Party at once more flexible and resilient, more united, and more appealing to a public already in the same boat. As always, we could learn a thing or two from the people we serve.

Lesson 3: This Is Only The Beginning

Whether the GOP embraces uncertainty or not, it is coming. It's not chaos or crisis. It's just disruption. You know, that cool, buzzy phenomenon Republican elites have championed in every other industry (that is, when it was at some one else's throat)? Well, now it's coming to drink their milkshakes, too.

Tea Party primaries, SuperPAC politics, and the breakdown of the Boehner-Cantor-McCarthy leadership team are only the beginning.

Tea Party primaries, SuperPAC politics, and the breakdown of the Boehner-Cantor-McCarthy leadership team are only the beginning. In this context, Congress today is just one more opaque, out-of-touch, legacy institution left over from a vanished era of centralized power now losing public credibility as the rest of American life grows ever more decentralized, personalized, and accountable.

This—not the forces of creative destruction, but Washington's grinding resistance to them—is the source of Congress's tedious, toxic dysfunction. As institutions, the House and Senate are clinging to an obsolete way of legislating.

When Washington insiders today talk of “getting back to regular order”—which, let's be honest, they do only selectively, when it serves their own interests—what they're often longing for is a process in which leaders and committee chairmen write bills in secret with the help of lobbyists, then hand out earmarks to buy off principled dissent and secure votes for passage.

That centralized, hierarchical process, long ago discredited as corrupt and corrupting, is just another victim of the disruptive forces of transparency and accountability that took down your local Borders Books and Tower Records stores years ago. It's not coming back.

As long as Congress resists the decentralizing forces changing the way Americans solve problems, we will continue to have—and deserve—the American people's contempt. The next House speaker, and the Republican Conference he or she leads, needs to understand that this institutional disruption (a) cannot be resisted, and (b) should be championed, because it will be a good thing for the American people.

Lesson 4: Open-Sourcing Congress

The challenge for congressional Republicans now—from the new Speaker on down—is not “getting back” to the old way of doing things, but devising entirely new ways of “getting things done.” The good news is that conservatives have an inherent advantage on this front, as our view of the world already inclines us toward bottom-up decentralization. The party of free enterprise and voluntary civil society is the natural home of open-source policy innovation.

The party of free enterprise and voluntary civil society is the natural home of open-source policy innovation.

For the new Speaker and all congressional Republicans, it's not enough to decentralize power from Washington to the states and the American people. We have to decentralize power within the federal government, too. As a Congress, that means we need to wrest back legislative authority from the executive branch to make federal lawmaking more directly accountable to the American people than ever.

Internally, too, the Republican majority should modernize and decentralize the legislative process according to the same principles. We need to move power out of congressional leadership and into the hands of rank-and-file members. We need to make more decisions in public, on the House and Senate floors, and fewer in secret meetings behind closed doors. We need to move legislative action away from the rigid, outdated committee structure and into more flexible, open-source networks of members.

After years of frustrating dysfunction, conservatives should recognize that the only way we can reform policy is to first reform the way we make policy. Conservatives need an agenda of institutional modernization and reform to complement and facilitate our broader agenda of policy reform. (As it happens, I have been working for months with several colleagues on just such a decentralization project that we'll start rolling out in the next few weeks. Stay tuned.)

How Conservatives and the Establishment Can Work Together

Taken together, I believe the four lessons above point toward the terms of a more perfect union between anti-establishment conservatives and Republican congressional leaders, neither of whom can truly succeed without the other.

The path to unity is neither decapitating leadership nor unquestioning obedience in the back benches.

The path to unity is neither decapitating leadership nor unquestioning obedience in the back benches. Rather, it's the creation of a different model for governing better suited to modern realities.

Anti-establishment conservatives do need to understand that the GOP lacks the power to do certain things without the presidency. At the same time, congressional leaders and proverbial "old bulls" need to understand that some of their inherited legacy powers no longer serve the cause or the country. They all too frequently serve Washington's K Street favor bank, which neither conservative reformers nor the American people should be expected to accept.

Conservatives shouldn't want more brinksmanship and showdowns to highlight our ideas; we should want a consistent, inclusive legislative process that renders those tactics all but obsolete. Contrary to so much punditry this last week, I don't think conservatives need a Speaker all Republicans can blindly trust to cut backroom deals for us, but a Speaker who organizes the House's work so backroom deals become a thing of the past.

If you actually talk to conservative House members about what they want in a new Speaker, you'll find they don't mention names or ideology. What they want most are changes to House and conference rules, which will—in their minds—give the legislative process more fairness and legitimacy in this new, "disrupted" political climate. (In the Senate, on the other hand, we don't need new rules so much as we need more rigorous application of the current rules. Long live the filibuster! But that's an argument for another time.)

What they want most are changes to House and conference rules, which will—in their minds—give the legislative process more fairness and legitimacy.

The upshot of these reforms would involve less leadership micromanagement of the floor, less-certain outcomes on votes, more rank-and-file input on chairmanships and the agenda, longer work weeks for members, and—not least—a healthy, constructive outlet for anti-establishment conservatives' laudable pursuit of more rapid and substantial reform.

Is that really so high a price to pay for more cooperation and unity, considering that conservatives have already proven they can break leadership's once-iron grip on those procedural levers?

A Speaker candidate who went to the Freedom Caucus with those "concessions" would only be offering the sleeves off of his vest. It's the status quo, after all, that's tearing the Party apart—why should Republican leaders try to salvage it?

In an absence of trust, what Republicans need now is an abundance of transparency. For conservatives, greater transparency and institutional decentralization won't mean we can suddenly win every fight. It will only mean we can fight fights of our choosing, and win or lose them fair and square.

It's the status quo that's tearing the Party apart—why should Republican leaders try to salvage it?

Leadership, on the other hand, should stop trying to rig the process to control the marketplace of ideas, and simply give the American people and their elected representatives access to a fair, open, and accountable competition. Like Uber, but for Congress.

Again, creative destruction is coming to Washington, whether we like it or not. Republicans' only choice is whether to resist the inexorable forces of transparency and accountability, or embrace them.

Reform will be a process of trial-and-error, to be sure. But the good news is that for the Sanders-Clinton-Pelosi-Reid Democrats, the centralization of power, however discredited, remains their sacred, organizing principle. Washington's toxic status quo—however despised by the American people—is nothing less than the crowning achievement of generations of progressives. Democrats really have no choice but to vehemently defend the status quo and shake their fists at noisy reformers to get off their lawn.

The field of reform, therefore, is wide open to the Right, and especially to the rising generation of Republican leaders now starting to emerge in the House of Representatives. Only a total failure of imagination would lead one to see this as a risk rather than an opportunity.

Republicans' only choice is whether to resist the inexorable forces of transparency and accountability, or embrace them.

However comfortable Washington's corrupt and dysfunctional status quo may be to many individual insiders, that status quo remains the principal impediment to conservative reform, Republican unity, and Congress's public approval. Once Republican leaders grasp that fact and begin taking steps toward reform, they'll be astonished at how effective and cohesive a team they will suddenly find themselves leading.

The Republican establishment's failure of leadership over the years is no excuse for conservatives' failure of imagination now. Conservatives have to start working immediately on our own agenda of prudent but disruptive institutional innovation, so that regardless of who the next Speaker is, he or she will walk into the job with a blueprint for success. In this new era, Washington's centralized status quo has been scheduled for the "destruction" side of the equation; it's up to conservative reformers now to deliver the "creative."

Top 100 PS1 games (2015-10-16 20:33)

Puzz Loop/Ballistic

The Playstation was blessed with many a fantastic puzzle game during its life span, and Puzz Loop is just one of these many unsung titles. Here the aim is to destroy marbles before they snake their way to your cannon located in the middle of the screen, the only way to get rid of them is to match colours in groups of three or more. Many people will be familiar with the game's concept due to the now popular PC game "Zuma" which essentially copied its main gameplay mechanic.

Disruptor

Disruptor is a very polished Doom style corridor shooter made by the company who went on to create the Resistance: Fall of Man games. On top of the shooting action the game gives you some interesting psionic powers which can be used to do a variety of things such as gain health. The game is still quite a playable blaster even now and is definitely one of the best of the brainless corridor shooters on the system.

Gex

Gex is a humorous Mario 64 style 3D platform game where you explore the levels searching for remote controls. The comedy can be a bit hit and miss at times, but the fast paced gameplay, varied environments (many of which are cool pastiches of famous movies) and Gex's unique stick-on-walls move all help to make it a very respectable platformer.

Vanark

Vanark is probably the closest the Playstation ever had to having its own Starfox style rail shooter. It has you piloting multiple vehicles which automatically move forwards along pre-determined paths, whilst highlighting and deploying missiles to deal with the enemies. Unique to the game are mild exploration elements which have you moving around a home base, and the occasional minigame section. The game is certainly no Starfox or Panzer Dragoon Zwei, but its still a fun diversion.

No One Can Stop Mr Domino

What we have here is a quirky and highly original puzzle game which has you playing as a walking domino who's charged with setting up domino runs around a number of different, and interesting courses. Basically you move around the course looking for run opportunities, and watching the elaborate tricks you've set up, until you've gained enough points to complete the level and move onto the next course.

Madden NFL 2000

A great American Football game and a huge improvement over the earlier PS1 releases due to its better, more fluid

controls, improved computer AI, and more polished gameplay. All this work led to a much faster, more enjoyable game.

Return Fire

Excellent port of the classic 3DO game, Return Fire has you playing action packed games of capture the flag. You choose your vehicle at the start (helicopter, jeep, tank, or support vehicle) attack the enemy base, and then attempt to drive back to your own base with flag in tow. The game is very playable, and the 2-player split screen mode is still very addictive.

Roll Away/Kula World

Here's another excellent puzzle game which manages to be both absorbing and unique in equal measures. The aim of the game is to simply collect all the stage keys, and then get to the exit, sound easy? well, the problem is in working out how to actually navigate the levels, as the ball that you play as sticks to the levels and defies gravity, allowing you to twist the stage upside down and on its side. The game is loads of mindbending, topsy turvy fun.

Wild 9

Here's a very clever, and interesting platform game from the people who made Earthworm Jim. The main gameplay concerns the manipulation of the enemies using a device called "the rig" which is essentially a kind of energy grappling hook. You can do a variety of different things with the rig, for instance the enemies can be thrown onto spikes to be used as platforms, or even be used to break grinders with their...er... bodies (the bad guys in this game get it bad). All in all a fun game which is always throwing new gameplay elements and ideas at you.

Syndicate Wars

Involving strategy game which has you controlling a squad of cyborgs through a Blade Runner inspired world. The game has you carrying out different mission objectives, and generally entails causing murder, mayhem and destruction with an assortment of very cool weapons.

Jet Moto 3

Futuristic racer which has you flying around a variety of terrains on hover bikes. Jet Moto 3 is a huge improvement over its predecessors, the handling is much better, the sense of speed is incredible, and the graphics are rich and colourful too.

Bloody Roar 2

A fast paced and accessible 3D fighting game where each of the game's characters can morph into animal forms. Its not the deepest fighter out there, but its a fun, frenetic, and likeable title with some very nice graphical effects and style.

Team Buddies

Action orientated real time strategy game where you retrieve boxes, take them back to your base and then use them to create more units or equipment. The game's real strong point is its frenetic 4-player split screen mode, with the action focused gameplay and easy to learn strategy elements making for a perfect party game. Word of warning for those easily offended, the original European release (not the US version) contains some really bad language and

cultural stereotypes which can get pretty extreme at times.

Speed Freaks

A nice kart racing game, Speed Freaks managed to bring some Mario Kart quality 4-player split screen fun to the Playstation. The game isn't a mere clone either, its a much more technical game than most kart racers, with handling requiring a good level of judgement, and precision, and the careful usage of speed boosts of utmost importance. Its not quite as fun or polished as Crash Team Racing, but personally I find it to be the more unique experience, so its still well worth checking out.

NHL 2000

Superb hockey game with smooth, responsive gameplay, impressive (for its time) commentary, and loads of stats, options and features that should keep even the most discerning hockey fan happy.

Real Bout Dominated Mind

I think this has to be the best of SNKs 2d fighting games on PS1. With Dominated Mind SNK wisely decided against straight porting Real Bout Special to the system, instead re-working the game to create an experience which worked better within the confines of the Playstation architecture. Here the plane switching has been removed entirely, but the gameplay runs well, the characters and fighting engine have been tweaked, with some new moves and techniques, and there's a new playable character, and setting for the plot.

Silhouette Mirage

This entry is for the original Japanese version of the game (I've heard the US version is inferior). Silhouette Mirage is an interesting take on the 2D platform shooter, in it your character changes colour depending on the direction she is facing, and only enemies of the opposite colour take damage, whilst those of the same colour become weaker with each hit. The game is full of clever level designs and memorable boss fights and is definitely one of the must play 2D titles on the system.

Worms Armageddon

The Worms series of videogames are very accessible turn based strategy games where the aim is to command a squad of four worms to wipe out the opposition using a variety of humorous weapons. This sequel is mainly just a graphical improvement, but all the charm and addictive gameplay have been transferred over totally intact, and the original idea was already so well realised to begin with that this isn't really much of an issue.

Need For Speed: Hot Pursuit

A very fun arcade racing game with nice graphics, good course designs, and a great sense of speed. What makes the game stand out is the addition of police cars and road blocks, creating some exhilarating cop chases and exciting gameplay.

Doom

Everyone interested in gaming knows Doom, this is one of the most important titles of all time, and pioneered the

whole first person shooter genre. The game has you running through corridors shooting enemies, and collecting keys, with nonstop action and loads of atmosphere being the main orders of the day. Doom on Playstation was a very early release (the game itself predates the Playstation by nearly a year), and games moved on a lot during the Playstation's life span, but the fact is that it does still stand up to many of the newer releases for the system, which really stands to its quality. It may not be the most impressive FPS title for PS1, but it still manages to be one of the best.

Alundra

Alundra is a excellent action adventure title where you fight through the worlds and dungeons slashing at monsters and solving puzzles, essentially its a Zelda clone for the PS1 (even the graphics style is reminiscent of Link to the Past on SNES). The story of the game isn't the most original, but the dialogue is fairly good and its certainly enough to hold attention, and there are a few unique elements to the gameplay, such as the character's ability to enter peoples nightmares in an effort to rescue them.

Rollcage Stage 2

This is a futuristic racing game which has you driving a flippable car that can drive along walls and ceilings, in a lot of ways it feels like a cross between the Wipeout and F-Zero series', with Wipeout's sense of style, and difficulty, but with F-Zero's elaborate gravity defying courses. This sequel improved immensely on the original game, which was a little finicky and difficult to play, they made the gameplay here a little more accessible, and the controls and physics are much more intuitive too.

Star Ocean: The Second Story

The PS1 is most assuredly one of the greatest machines out there for JRPGs, its just packed to the max with quality titles, and classic games like this, which could probably get into any other consoles top 20 sadly end up being overshadowed. Star Ocean is a highly polished, and very endearing RPG from Enix, it has some beautifully crafted presentation, with memorable environments and very high quality music, and its full of content, with an interesting item creation mechanic, and loads and loads of different endings.

RayCrisis

The 3rd title in the Layer Section/Rayforce series of vertical shooters continues the polygonal 3D of the second game, but is, in my opinion a big improvement in gameplay design, returning the series to the high quality of the original title. The gameplay has you firing on two levels, you fire forwards with your main gun, but also have a lock-on homing missile launcher for dealing with enemies below you, this system has always worked well for the series and there's no exception here, the graphics are colourful, stylish, and impressive, and really compliment the gameplay style very well.

Anna Kournikova/Smash Court 2

A tennis game which doesn't take itself too seriously, Anna Kournikova's Smash Court Tennis' emphasis is purely on fun, and along with the friendly, accessible single player there's a truly brilliant 4-player mode as icing on the cake.

Breath of Fire 4

Here's nice, solid RPG from Capcom with interesting characters and stylish artwork that's full of charm. Breath of Fire isn't the most original of RPGs out there, but the developers have done a good job in all the crucial areas, the plot is good, the environments are cool, there's a lot of minigames and side tasks, and the battle system is entertaining, and has a few quirks of its own (such as the ability to change some characters into dragon forms, and the feature of swapping characters to the bench during combat). Overall its a nice title which doesn't tend to be too expensive and

is certainly worth checking out.

Vigilante 8 2nd Offence

The Vigilante 8 games were an excellent series of vehicular combat games which took over from where popular titles such as Twisted Metal left off, adding a lot of much needed polish, and variety to the genre. This sequel has the expected improvements to presentation, but is also better balanced than the original game, and has more gameplay modes and features.

Mr Driller

This brilliant puzzle game has you digging downwards through blocks in an attempt to reach the bottom of the screen without getting yourself crushed. Its kind of like a mixture of Namco's earlier title, Dig Dug, and the 8-bit legend Boulderdash.

Micro Machines V3

3D sequel to the classic multiplayer series or top down racing games. The game has you racing tiny cars across a variety of very imaginative courses, from breakfast and pool tables, to ponds and science labs, the gameplay from the excellent 16-bit titles has transferred over to the new perspective, and Codemasters have done an admirable job of including as much content as possible, with a huge variety of vehicles from both the standard series, and the combat themed Military edition.

MDK

If you want loads of fast paced running and blasting action with doses of bizarre humour thrown in for good measure this is where you go. MDK essentially has you moving through the levels using a variety of cool weaponry (including the ever excellent sniper rifle, and grenades) shooting everything that moves and solving the occasional puzzle. The only thing holding the game back a little is that its over fairly quickly, but its great fun whilst it lasts.

ISS Pro Evolution

As usual Konami excelled themselves with this superlative sports title. Wonderful, responsive controls, and great computer AI helped to make this the definitive Football/Soccer title of its generation.

Gradius Gaiden

Gradius Gaiden does the classic shmup series proud, providing all the polish and great gameplay you'd expect from such a renowned series. To be honest it doesn't exactly re-invent the wheel, but make no mistake this game is no lazy rehash, the graphics and art design are lovely, and are full of memorable set-pieces (including the return of many classic bosses), and the 2-player mode is particularly awesome.

Klonoa

Klonoa is a brilliant 2.5D platform game with some really imaginative, stellar art design throughout. On top of some very solidly designed platforming elements the gameplay has you grabbing the enemies, allowing you to throw them at each other, or use them as a stepping stones for a double jump. The whole thing has a ton of charm, and the elements come together to create a likeable, appealing experience, with the only real issue being the length.

Point Blank

Colourful lightgun game which, along with Time Crisis helped to make Namco the undisputed king of the genre on PS1. Point Blank's gameplay is built around quick minigames each of which have different tasks and objectives. The minigame set-up, and fast pace creates an experience containing a lots of variety and enjoyment.

G Darius

Truth be told I've never been much of a fan of the Darius series, I've always found the power-up system to be fairly uninspired, and levels unmemorable, but all of this changed when I played G Darius. Here we have very clever, very imaginative shooter with a lot of depth and content. The staple power-up system is still there, but the developers have decided to fuse it with the excellent power-up system pioneered in the Mega Drive game Gaiars, essentially you can steal weapons from the enemy ships, with each enemy ship gives you a different style of power-up. The new revamped power-up system, as well as some updated 2.5D style graphics, and branching paths between stages elevate G Darius to being one of the absolute best scrolling shmups of the 32-bit generation.

Future Cop LAPD

Future Cop is an under-appreciated mission based game which has you controlling a mech that can transform into a car, its mildly reminiscent of the Strike series of games. Future Cop does its campaign mode very well, the objectives are diverse, the gameplay is filled with cool weapons, and big explosions, and the whole thing can be played co-operatively in an excellent split screen mode, not only that but on top of the main campaign there's also a fully formed strategy game thrown in for good measure too (itself with both single player and multiplayer options). The strategy game is a simple capture the bases and create units affair, but its still very fun in its own right, leading the game to be one of the best deals of its era.

Fear Effect 2

For those unfamiliar with the original Fear Effect, it was a great Resident Evil style survival horror game with impressive graphics, and cool puzzles that, with its buxom main character (who, according to the plot once worked in a brothel) occasionally trod the thin line of good taste. With this sequel the developers decided to go the whole way with the "mature" elements and revel in excess, the result is a title that's as close to the feel of campy grindhouse sexploitation cinema as the videogame industry has ever gotten! Definitely a unique and engrossing game.

Abe's Exodus

Member of the Oddworld series of games and the sequel to the earlier (also excellent) Abe's Odyssey. Abe's Exodus is mainly a 2D platformer with a high emphasis on puzzles, the general gameplay focuses quite heavily on trial and error, but its actually done so well here that it manages to work (mainly because you get unlimited lives and respawns are never too far away). The storylines of the two Oddworld games on Playstation were among the most well written, and interesting of the games of the era, with a cast of characters who were fleshed out, and very likeable. The main improvements in this sequel were better balancing, and an improved saving method.

Parappa the Rapper

Here we have what many consider to be a genre defining title. Parappa the Rapper pioneered what is now referred to as the rhythm action game, essentially you have to match the musical beats with timed button presses which follow the onscreen prompts. The game has a humourous plot, and is quite accessible, so its very easy to see why it

remains so well liked today.

Warcraft 2: Dark Saga

Take the original Command and Conquer, change the setting to fantasy, and add some great humour and you have a pretty good idea of what Warcraft 2 is like. The game is a strategy title which has you mining resources, and creating buildings and units in real time to try to obliterate your opponent before they get you first.

Suikoden II

Fantastic sequel to one of the earliest JRPGs on the system, Suikoden II goes for a pure 2D experience, and emphasis on finding secrets and searching for characters to join your party (there's a huge number of playable characters). Suikoden has a well written storyline, with good dialogue, and characterisation, and all in all the game is just packed full with content.

Tomba 2/Tombi 2

The Tomba games on Playstation are excellent 2.5D platform games created by Tokuro Fujiwara, who worked on a whole bunch of classic games for Capcom (Commando and Mega Man for example). Tomba II's gameplay essentially has you exploring the levels looking for tasks to complete, some of which are required to progress whilst others just increase your adventure point score, there's items and upgrades to collect, and the gameplay is fun, varied, and full of a lot of charm.

Dead or Alive

Fast and fun arcade 3D fighting game with an emphasis on speed and countering. This PS1 version isn't quite as good as it could've been (the backgrounds especially can be a little drab at times) but overall its a very respectable, playable port.

Tenchu 2

Along with Metal Gear Solid the original Tenchu did a lot for popularising the stealth genre. It gave you the opportunity to sneak around as a ninja creeping up on people and assassinating them before they knew what hit them, which, unsurprisingly made for a tense, compulsive play experience. The original game gave you all the kinds of equipment and moves that you'd want, with swords, shuriken's, and an excellent grappling hook, and this sequel kept all this, whilst being longer than the original, and with a much more interesting plot.

Exhumed

This is a very good port of the classic Saturn first person shooter. The original game added a lot of interesting adventure aspects, and upgrades to the simple Doom style shooting and corridor formula which was still very popular at the time. The additions help to create a more cerebral experience, as you'll often gain new abilities which now give you access to different routes throughout earlier levels, gameplay elements which reward those with a keen eye and talent for exploration.

TOCA Touring Cars

Codemasters' TOCA series of racing games made a name for themselves by producing no nonsense, realistic driving experiences which required a certain level of mastery. By this, their third title they'd refined the concept and managed to make the game a little more accessible too.

Spider-Man

I think that at the time of release this has to have been the best videogame adaptation of Spider-man (I liked the Mega Drive game but it had its faults), all his signature moves are available, web swinging, web shooting, climbing walls, and they all work here in a very effective, and intuitive way. The 3D engine itself is very good, and the levels have a lot of variety. All in all they nailed the feel of the Spider-Man comics down very well, and that element of fun which you should naturally expect from a Spider-Man game is there in spades.

Soul Blade

Namco's second biggest fighting series after Tekken is a weapons focused game that has you controlling a bunch of interesting characters throughout colourful, vibrant environments. As you'd expect from Namco, Soul Blade is easy to pick up, accessible, and fun but still has enough depth in the long term to keep the fighting game aficionados happy too.

Colony Wars Vengeance

The Colony Wars games are a series of mission based space combat games made by the ever excellent Playstation stalwarts Psygnosis. The games have you charged with missions such as protecting space stations, shooting down enemy aircraft, or towing dangerous objects, the controls are excellent, and responsive, there's branching paths taking place throughout the game adding to longevity, the plotlines are always in-depth, and memorable, and the graphics are rarely anything short of impressive. Word of warning though, these games are difficult as hell, and can have sparse checkpoints so expect to experience frustration from time to time.

X-Com: Terror From the Deep

Fantastic turn based strategy game made by Julian Gollop (creator of many popular computer games such as Laser Squad and Rebelstar) which has you going up against an alien empire. X-Com's gameplay has you moving around a squad of soldiers around the grid based levels, movement and weapon usage uses up action points which are given to you at the start of each turn. Terror from the Deep is a very in-depth, and complex game, it contains many elements, such as resource management, squad tactics, and research and development, and is aimed more at the serious strategy game player, so its not really for those with short attention spans.

Einhandler

Square took a time out from producing RPGs to create this 2.5D scrolling shmup, and its a good thing too as its a really stellar game. The main gameplay mechanic here is the fact that your ship has a grappling arm attached to it which can steal weapons from the wreckage of enemy ships. The diversity of the different weapons really makes the game interesting, and Square have done a really fantastic job with the presentation, with a dystopian graphics style and some excellent music.

Rival Schools

Easily Capcom's best creation in the 3D fighting stakes until Power Stone came along. Rival Schools in a frenetic, over the top fighter which has you competing two on two tag style (your team mate can also help you from time to time by pulling off specific team attack moves). The game is a colourful, fun and underappreciated release that I wholeheartedly recommended

Devil Dice

Clever and quirky isometric puzzle game where you need to roll dice around a platform so that the numbers on top match those of the neighbouring dice. The game has a lot of modes, some with specific puzzles which give you a certain number of moves to succeed, and others which take place as a competition to see who can get a full collection of numbers first, the multiplayer mode is especially brilliant and makes for a very cool party game.

Mega Man X4

The first Mega Man game to put the capabilities of the 32-bit systems to use (X3 was a SNES port), and also one of the most memorable. For those unfamiliar with the series the Mega Man games are 2D platformers which have you shooting enemies throughout elaborate, intricately designed levels, with the "X" series they then added adventure elements and upgrades with more of an exploration bent. Mega Man X4 has some of the best levels and environments of the series, its got a fairly good difficulty curve, and the feature of choosing to play as Mega Man, or series favourite Zero adds a lot of longevity and diversity to the gameplay.

Persona 2: Eternal Punishment

Very original isometric horror RPG which has you playing as a magazine journalist covering a new serial killer called the Joker. The whole plot and gameplay here are admirably unique, and absorbing and the game length is quite considerable.

Silent Bomber

Intense and hugely underrated all out action game where you blast through the stages planting and detonating bombs. The main character here is fast and responsive, the core gameplay idea is exciting, and fun, there's brilliant set-pieces, a respectable storyline, extras such as the upgrade chips which you need to assign to power-up your character, and tons and tons of style.

Dino Crisis 2

Following the hit original (often dubbed Resident Evil with Dinosaurs due to its close gameplay similarities), Capcom decided to branch out more with this sequel and created a more action orientated game with less emphasis on the survival horror fundamentals laid down by Resident Evil. Dino Crisis 2 is simply all about blasting dinosaurs, lost of them, with loads of different weapons, and as such it succeeds at being a very fun action title.

DoDonPachi

This vertical bullet hell shooter (a sub genre of scrolling shmups where the stages are filled with huge numbers of coloured bullets in elaborate patterns) is one of the all time classics of its type, and is a very good introduction to the game style. The game is action packed, has huge screen filling weapons, memorable boss fights, and great presentation. The PS1 port of DoDonPachi is very good, in fact in this case its actually graphically better than even the Saturn version (multiplatform shmups usually tend to be better on Saturn), everything runs smoothly and slowdown is also at a minimum too.

Valkyrie Profile

An inventive and highly original take on the RPG genre. The game has you playing as an angel searching for souls to fight in an upcoming holy war, each warrior has to be found, and trained in both combat ability, and personality

attributes (heavenly warriors must be archetypal heroes). The main gameplay is based around 2D platforming sections, and menu based combat in the dungeons, and exploration and searching for new recruits in the towns and villages. The whole game is infused with a very beautiful, very downbeat tone, with the stories of the events leading to the deaths of each of the new recruits being quite memorable and often tragic.

Tomb Raider: The Last Revelation

After playing through all the Tomb Raider games in succession for this article I really felt that Core probably didn't do enough between releases to progress the series, I tend to think the first game was probably the time when the original series was at its most competitive. Either way, when looking through all the releases and the elements they added I would have to say that The Last Revelation is probably the most polished of the games, it includes the best elements added to the prior games, adds rope swinging, has improved graphics, and removes some of the less welcome additions, the puzzles themselves are as well designed as ever, and the environments are also quite atmospheric.

Darkstalkers 3/Vampire Savior

From Darkstalkers 3 onwards Capcom did a real turnaround with their PS1 fighting releases (which had previously been disappointing to say the least), and started to put some real effort into optimising them to the Playstation hardware, as a result of their hard work Darkstalkers 3 turned out to be a very respectable version of their excellent monster themed 2D fighter. Here we have a game which is every bit as playable, and well made as any of the Street Fighter games, the artwork is very distinct, and beautifully realised and the enemies are all wacky and a joy to play. For anyone looking for an offbeat alternative to Street Fighter, this is the game to check out.

Rayman 2

At release Rayman 2 stood out as one of the more brilliantly designed 3D platformers of the era. Instead of directly copying Mario 64, and its ilk, the game struck up a happy medium between large explorable worlds, and more a straightforward, action focused gameplay. This creates a fun to play game more akin to the 2D games of old, with excellent elements like the grappling hook swinging adding even more to the experience. Truth be told, the PS1 version is probably the weakest version of the game, but credit where its due its still one of the best 3D platformers on the system (which really stands to the quality of the original material), and it does have some nice extras which may be appreciated, such as the new voiceovers for all of the cutscenes.

Time Crisis

One of the most popular Lightgun games of all time, Time Crisis added a very cool cover system of its own to the formula (essentially you automatically hide between objects but have to press a button to break cover to fire at enemies), and makes the player follow a strict time limit, which keeps the action moving. Its everything you'd want from a good lightgun title.

R-Type Delta

Having played a lot of the classic scrolling shooter R-Type whilst growing up I initially had high hopes for this game when I first booted it up, never did I expect R-Type Delta to be anywhere near this good though! The design and gameplay here is just so clever, and excellently well judged, the tactics have been tweaked, with level layouts perfectly set-up to compliment the versatile Force Pod power-up, there's some new ships (each of which gives a different gameplay experience), and the set-pieces are a joy to behold, on top of all this is some really superb direction, with the in-game music carefully timed with the onscreen action to create an experience which often verges on cinematic.

Syphon Filter 2

The Syphon Filter games are mission based 3rd person shooters which have you controlling a special agent named Gabe Logan. I had trouble deciding between the 1st and 2nd games of the series, as gameplay wise there's not a whole lot between the two, but in the end I think the sequel, with its slightly more polished controls, and multiple playable characters just about edges out the (also excellent) original. Gameplay is mainly focused on shooting the enemies, but each level has missions to be carried out which vary in objectives and keep the game interesting.

Threads of Fate

This is the Square RPG for those who want a little more action and a little less number crunching, and as such is probably the most accessible of their PS1 RPGs. Unlike most of Square's other titles on Playstation, this is a pure action based RPG (think Zelda with leveling up, or Secret of Mana), you run through the levels hacking at the monsters, solving the odd puzzle, or doing platforming sections, on top of that you have the ability to morph into the monsters you defeat, each of whom have their own abilities and attacks. Threads of Fate is a very nice title that has a lot of charm, and a pure emphasis on fun.

Super Puzzle Fighter II

One of the best competitive falling block puzzle games out there, here you have to match the crash gems with their respective colours. The aesthetics and presentation here are first rate, with a jokey Street Fighter II styling, and Puzzle Fighter II's gameplay has clearly been refined to produce some of the deepest competitive puzzle thinking out there, with matches between two experienced players often turning into tense, heated contests.

Tobal 2

This fantastic sequel to one of the deeper of the 3D fighters on the PS1 unfortunately never got a release outside of Japan, which is a truly great pity, as this was a huge improvement of what was already a very good game, and is definitely among the best of the 3D fighters available for the system. Tobal 2 produces an excellent, fluid combo driven fighting engine, it has some really impressive graphics (with a reported 60fps), and a bunch of different modes, with the RPG style quest mode from the original making a welcome return (with improvements too). All in all a great package and a must have for fighting fans.

Final Fantasy Tactics

Turn based strategy edition of one of the most beloved videogame series', Final Fantasy Tactics has you moving units around on a grid based isometric map. Whilst the game goes for a very different gameplay style, its as deep and involving as you'd expect from any title in the series, and as always the presentation, story, and music all shine through in their high quality.

Colin Mcrae Rally 2.0

With Colin Mcrae Rally Codemasters aimed to create a much more realistic rally experience, doing their best to mimic the kind of handling you'd expect from real dirt roads. They succeeded admirably, and with this sequel managed to wholly improve, and build on the original, creating a deep, and challenging realistic racing title.

Quake II

Here's the port that nobody expected the PS1 to pull off, a very playable, excellent looking version of Quake II. The game leaves the medieval setting of the original and puts you into a futuristic, alien world setting, the visceral gore

and action is here with a vengeance, and the game ambitiously attempts to create a seamless gameplay world which avoids the usual level structure. On top of the excellent 1-player mode, Quake II also throws in the best 4-player deathmatch of any FPS game on the system, its fast, with a good framerate and great arena's to play in.

Grandia

Grandia originally made a name for itself as the Sega Saturn's alternative to the then hyped Final Fantasy 7, unfortunately that version (which is said to be slightly better) was never released in the west for the system, but eventually this very respectable, and fully translated PS1 version did turn up. Grandia was one of the earliest JRPGs to use a fully 3D environment (most had flat 2D pre-rendered backgrounds at the time), and the effect here is very cool, and doesn't really intrude too much on visibility, the plotline is a far cry from the brooding style of many of Square and Enix's offerings, going for a brighter, warmer story that has more emphasis on humour.

Kurushi Final

Here's an ingenious, and underrated puzzle game where you detonate blocks rolling towards you before they crush you. The game has a fairly simple to learn system where you highlight squares on the floor, and then detonate them after a block has rolled on top, if you detonate a green block it allows you to blow up a bunch of blocks at the same time, if you detonate one of the black blocks by accident you get penalised by having the pathway behind you removed. Whilst easy to learn, the game gives you a lot to master, and it really is a very unique a fun experience.

Crash Team Racing

Here we have the PS1s long awaited answer to Mario Kart 64. Crash Team Racing is certainly derivative, but developers Naughty Dog clearly knew what made titles like MK64, and Diddy Kong Racing the great games they were, as CTR manages to recreate all the fun, and addictive gameplay of those titles, whilst adding crash's distinctive characters and environments, and loads of graphical polish. This is the place to go if you have three friends visiting and a multitap.

Front Mission 3

Front Mission 3 was the first in the series to manage to make it to the west and happily it was also one of the best to introduce the series. Front Mission 3 is an strategy RPG which has you controlling mechs around grid based environments, taking it in turns to take shots at each other, its battle system is as well thought out as you'd expect from Square, and is very intuitive, the politics driven storyline is interesting and complex, and the developers have really done their best to add all the little details to make the world in the game rich, believable, and in-depth.

Spyro: Year of the Dragon

With the original Spyro, Insomniac (who now busy themselves with creating the Resistance series on Playstation) knocked all of the platforming pretenders on Playstation aside to provide a hugely polished game with a big free roaming environment, and lots to do. This third sequel tightened up all the gameplay and presentation, and added loads of new minigames, and different playable characters (including a flying penguin) to keep the gameplay fresh throughout.

Wipeout 3 Special Edition

Special Edition is the quintessential Wipeout game on the system. Psygnosis took all the best points from Wipeout 3, such as the phenomenal graphics, and presentation, improved them even further, and then looked at some of the

criticisms and did some gameplay balancing (handling has been improved for some of the craft). Those things alone may not sound like enough for a new release, but that's not the best of it anyway, the best of it is that Special Edition actually contains three extra tracks from the original Wipeout, and five extra tracks from Wipeout 2097/XL, making it essentially a compilation of all the best Playstation Wipeout games. Special Edition was unfortunately only ever released in Europe, and for those without access to Special Edition I feel that Wipeout XL slightly edges out vanilla Wipeout in quality.

Silent Hill

Konami's answer to the Resident Evil series was a creepy, atmospheric, and original survival horror title. Whilst you explore the dimly lit, foggy town solving puzzles there's an ever present feeling of danger and tension, you're always wary of what could be just outside of your vision. The storyline here is very well crafted, and the game, at its best is genuinely unsettling.

Command & Conquer Red Alert

The original Command and Conquer (and its forebear Dune II) revolutionised real time strategy games, with its intuitive, accessible, and ultimately fun gameplay set-up based around mining resources, and creating buildings and units to attack the enemy base. This sequel was a big improvement on the original's formula, containing improvements to the units and graphics, as well as adding a healthy dose of humour to the proceedings, the PS1 port is a very nice conversion which also, happily includes mouse support.

Vagrant Story

With Vagrant Story developer Square focused on making one of the deepest battle systems of any PS1 game, using a slightly more hands on approach (the battles are still menu driven, but you run around in real time trying to get into a good position between strikes), its strategies are deep, with all weapons having their own in-depth stats, types of combo's, and custom attack choices, so deep in fact that to master it you have to pretty much move into micro management territory! The main gameplay takes place in dungeons, and feels a little bit more adventure flavoured than you'd expect, with a multitude of puzzles to solve and maps to check. As a late PS1 title Vagrant Story has some of the best graphics on the system, unlike many RPGs of its time it eschews FMV movies and does everything with the in-game engine (which still looks excellent). Story wise it's a little slower than many of the other big titles, but is quite unique and interesting when it fully gets going.

Medal of Honor: Underground

The original Medal of Honor included one of the most engaging campaign modes to grace the PS1, gone were the brainless blasting and corridor's of earlier PS1 games to be replaced with elaborate story driven missions to fulfil. This sequel improved immensely on the formula laid down by the original and was a much more polished, graphically impressive game, its new setting (amongst the backdrop of the French resistance) added immensely to the feel, and brought a certain element of intrigue and subterfuge to the proceedings.

Street Fighter Alpha 3

Capcom carried on with their new high standards and produced yet another highly impressive 2D fighter for the PS1 (after so many previously disappointing ones). This version of Street Fighter Alpha 3 manages to impress with its similarities to the original coin-op in graphics, and animation (though still not quite as close as the Saturn version), and with load times nowhere near as intrusive as in earlier PS1 fighters. The game itself? quite possibly the best Street Fighter game ever! loads of classic characters, fantastic art design, tons of options ect, effectively it was everything a Street Fighter fan could ever want.

Grand Theft Auto 2

At a time when freedom of choice in videogames was starting to become rare, with straightforward, linear games taking over, Grand Theft Auto came out of nowhere to almost single handedly rejuvenate the concept. Here we have a game where you have complete access to an entire city, there's missions to carry out (such as deliveries, and hit and runs), but you're free to choose where you want to go, when you want, you can even ignore the main game and just cause havoc! this sequel adds a 2.5d perspective and tightens up the already excellent gameplay.

Tony Hawk's Skateboarding 2

Here's another great series known for its pioneering originality. Tony Hawks was an addictive game which had you careening around different environments pulling off impressive tricks and manoeuvres. The games managed to be very accessible, yet still with a huge learning curve that allowed those who stuck with them to truly master them, and wow their friends. Along with the usual presentation improvements you'd expect, this sequel also adds extra moves which allow you to string more tricks together, and a great park editor.

Final Fantasy 9

For their third Final Fantasy game on the Playstation Square decided to go for a brighter style and lighter tone (albeit the plot had its dark moments), a style which contrasted greatly with their two previous outings. Final Fantasy 9 attempted to put the sense of wonder back into the series, every place in the world was a joy to explore, and the characters were some of the most likeable in the series.

Crash Bandicoot Warped

When Naughty Dog decided to make a 3D version of the platforming mascot game they took a much more literal route than many of the bigger companies, no searching around for items or puzzle solving here, just pure straightforward, platforming bliss in 3D. Warped represents the high point of Naughty Dog's Crash Bandicoot games, it didn't stray too far from the classic formula, but added a little more variety, and a ton more polish to mix.

Chrono Cross

Here's yet another excellent RPG from Square that carries on their reputation as the best RPG company in Japan. Chrono Cross' story is one of the more unique, and instantly engrossing of the 32-bit era, it concerns alternate realities, with the main character being transported to a world in which nobody recognises him due to his tragic death at a young age. The game, like its predecessor eschews the random encounters found in many other JRPGs for a system where enemies can be seen, and avoided if so wanted, it also has one of the most interesting, and elegant of the battle systems of that era, with colour coded attacks, and customisable tables which allow you to assign your moves at different levels. All in all the game is an artistic, and fantastically memorable experience.

Driver

In 1999 a company called Reflections, only known for their Shadow of the Beast and Destruction Derby games came out of nowhere to release one of the seminal games of the whole era, Driver. Driver was an ambitious attempt to bring free roaming games to the next level, the execution was brilliant, with the graphics and speed free from major issues, and the whole thing was infused with a cool 70s cop show sensibility. Essentially the game has you driving around a city doing jobs under strict time limits, and escaping the ever present police (though here, unlike

GTA there's a less morally questionable plot about being an undercover cop thrown in). Definitely one of the more important action/driving games of the 32-bit era.

Resident Evil 2

With the first Resident Evil Capcom took the groundwork laid down by Alone in the Dark and turned it into the horror gaming tour de force it always promised to be, creating a great combination of chills, clever puzzles, and exploration. With this superlative sequel (set in a police department and the outlying streets) Capcom refined the gameplay, making a more focused, pacey game, and used a much bigger, less claustrophobic setting. All around, the game was a hugely enjoyable, well constructed experience.

Final Fantasy 8

When charged with the difficult job of following up one of the biggest games of all time, Square surprised everyone by creating something which couldn't have been more different in style and execution to its famous predecessor. With Final Fantasy 8 the style and plot took on a more serious, and mature look, with full sized characters and a plot revolving around soldiers and armies taking the place of the small characters and stylised art design of FF7. Focus also turned towards building a much more in-depth, and complex battle system, and its in this area where Final Fantasy 8 really shines, you could spend an absolute age mastering it.

Civilisation 2

Civ 2, I feel has to be considered the premier strategy title on the PS1. This classic PC game where you need to create and raise your own civilisation was transferred with aplomb to the machine. All the options and features you could hope for are provided, and the rival civilizations and fight for dominance involved give it a level of urgency and addictiveness unsurpassed by other titles of its time.

Ape Escape

This brilliant game has you exploring through its levels tracking down and re-capturing a bunch of super intelligent monkeys who've escaped and are causing trouble. Ape Escape was one of the first games to properly use the dual analogue set-up of the then new Playstation controller (the second analogue gives you control over your net), and it managed to be consistently fresh throughout by slowly giving you access to new equipment and items (all of which are a joy to use) as the game progressed. This definitely has to be my favourite platform game for the PS1, the game is just so full of wacky charm.

Ridge Racer Type 4

For anyone who leans more towards the fun, exciting and uncomplicated thrills of arcade racers over the ultra realistic ones, Ridge Racer Type 4 is where its at on PS1. Here you'll find nothing but fast racing with tight controls, over the top powerslides, and some of the classiest aesthetics and presentation to ever come out of a videogame (truly a lot of the style here has hardly dated at all). Type 4 keeps the pace going quickly, with very little frustration throughout, as such its not the most difficult game out there but the huge numbers of unlockables help to keep the enjoyment going for a long, long time.

Soul Reaver

Where it comes to 3D action adventure games the PS1 doesn't exactly have a glut of titles, but luckily Soul Reaver is clearly one of the absolute best available for the time. Soul Reaver is a huge, ambitious title, the world in which it takes place is detailed, and well imagined, and each area of it blends pretty seamlessly into the next. Story wise

the game also excels, its plot about a world overrun with vampires, and decay, whose only hope is the resurrected vampire Raziel, who himself is only really interested in revenge against those who killed him, is easily one of the best of its time. Gameplay is tight, and inventive, with fluid movement, a plethora of different attacks, and well constructed puzzles.

Xenogears

Here we have a sci-fi RPG of grandiose scale, and yet another great RPG from Square (yeah I know, this article is starting to read like a Squaresoft advertisement). With this game Square have gone with a fully 3D environment (unlike most of their other RPG titles, which used pre-rendered 2D backgrounds), they've created two separate battle systems (one for the characters on foot, and one for them whilst piloting the huge mechs), and they've created a huge, detailed plot spanning hundreds of years, that incorporates psychological, and religious themes. All in all I think Square's work paid off, as what they've created here is a tour de force.

Castlevania: Symphony of the Night

Its ironic that midway through the anti 2D 5th generation Konami released their 14th Castlevania game, as it turned out that not only was it one of the best, and most important Castlevania releases, but it was also one of the best 2D games ever created too. Symphony of the Night was a pretty big departure for the series, it was the first to fully embrace the deep, Metroid style gameplay (one huge environment to explore, with new abilities giving you access to different areas), and subsequent releases in the series wisely stuck with this winning formula. Everything comes together very well here, the level layouts are clever, and inventive, the monster designs were memorable, there's some amazing orchestral arrangements, loads of atmosphere, a good plot, everything you could really be expected to hope for. The best 2D game on the Playstation bar none.

Tekken 3

With their third Tekken outing Namco refined everything that made the previous games so good, the fluid, combo driven gameplay, the memorable characters, the impressive environments and FMV, and then added several coats of polish to create one of the most graphically impressive titles for the PS1. Where it comes to the Playstation Tekken 3, is the last word in fun, accessible fighting games.

Final Fantasy 7

The game which pushed the Final Fantasy series into the western mainstream consciousness, and made the series into one of the biggest moneymakers in gaming history. After weighing up the pro's and cons of each of the Final Fantasy games on the PS1, I decided to agree with the masses and take the predictable route, placing FF7 firmly at the top of PS1 RPGs. For me, 7 represented one of the biggest turning points for the series, Its story was engrossing and well paced, throwing you straight into the action and grabbing hold of your attention throughout (8 was notably worse in this area, with a slower start and high and low points), the battle system was accessible, and well thought out, and the aesthetics and art design had the perfect mix of themes and emotion. This game was many peoples introduction to the world of RPGs and to be honest, at the time you probably couldn't find a better ambassador.

Gran Turismo 2

With Gran Turismo Sony created a racing game of unparalleled realism (for the time). They went to town on making the physics and handling of all the cars as good as possible, they created some of the most impressive graphics for any game of the time, and they filled the whole thing with lots of content. Amazingly Gran Turismo 2 managed to

one up its predecessor in most aspects, and raise the already high bar laid down by the first game, even higher.

Metal Gear Solid

So here we have, what is, in my opinion the number 1 game on the Playstation, Metal Gear Solid. This game was probably the first that I can remember which had a real "movie like" quality to it, straight from the excellent opening this was a game which screamed high quality. When it came to the gameplay itself the game did not disappoint in the slightest, containing all the action, set pieces, and inventive levels that you could hope for, the stealth, and sneaking elements were a really fresh idea when the game came out, and anyone playing it must've wondered why nobody else of the time had already provided a similar game, the concept was so perfect. One of the most memorable pop culture experiences of the entire decade.

Playstation 5 coming 2017 (2015-10-17 14:18)

We waited an agonizing seven years for Sony to upgrade its PS3 to the PS4, but will we have to wait as long for the PS5? Here we reveal all there is to know about the Sony PlayStation 5 UK release date and specs. Updated 11/06/2015. Also see: PS4 vs Xbox One.

Very little is known about the PlayStation 5, which isn't surprising given that its launch is likely years rather than months away, but in this article we'll discuss the rumours and speculation surrounding the PS5 and see what details we can glean.

Last week we discovered Microsoft was due to unveil a new Xbox One with an upgraded spec at E3 2015. Sony also has a press conference at E3 2015, which we'll be streaming live here on PC Advisor (watch the Sony E3 press conference here), so is it about to do the same?

While we could see an upgraded version of the PS4 at E3 2015, don't expect a new PS5 just yet. We think it's more likely we'll get a slimmer version of the PS4 (in fact, documents visible via the FCC suggest we'll not only get a slimmer PS4 but also like the new Xbox One there will be a PS4 with a 1TB hard drive), and possibly the announcement of PlayStation Now availability in the UK. PlayStation Now is similar to PlayStation Plus, but extends support to non-Sony devices, letting you play games on your phone, tablet or other devices. Also see: What to expect from E3 2015.

Sony PlayStation 5: Will there be a PS5?

With the upcoming release of PlayStation Now - expected to hit the UK sometime in 2015 and currently mid-beta trial - many have speculated that physical consoles are a thing of the past. PlayStation Now is a cloud-based gaming service that lets you play PS3 games on the PS4, PS Vita and Bravia TVs, while support for non-Sony and -PlayStation devices will come later. It's a bit like Netflix, but for games rather than films.

Yet we still think there will be a PS5. Not only does the PS4 bring in a huge amount of profit, Sony boss Shuhei Yoshida has been quoted as saying the future of the PlayStation is up to developers. Indeed, if rumours are to be believed it's about to launch two new PS4 models in 2015, so it won't be turning its back on the platform any time soon.

"If they still feel that we need more machine power - 'we want to realise this and that and that, but we cannot do it with the PS4' - there's a good reason to have the PS5 so developers can create their vision," said Yoshida.

The PS4 is immensely powerful but, unlike the thousands of gaming PCs with which it competes, Sony's console doesn't benefit from the possibility of regular processor and graphics updates. One day we will reach the stage where the PS4 is notably inferior to PCs, and then game developers will demand more power. Also see: PS4 vs Xbox One vs gaming PCs and Best gaming PCs 2014.

Plus, with PlayStation Now Sony will be able to keep customers happy by allowing them to continue using their PS4 games on a new PS5.

Poll: Which is the best gaming platform?

Sony PlayStation 5: Potential PS5 UK release date

It's been 20 years since the first PlayStation was released, and there were seven years between the launches of the

PS3 and PS4. That was the longest stretch, with the PS2 appearing five years three months after the PS1, and the PS3 six years eight months after the PS2. It's fairly safe to say Sony doesn't follow a strict pattern with its console releases. Games consoles are naturally long-lifecycle products, with customers investing considerable expense in both the platform and its proprietary titles. However, Sony is reportedly working on shorter timeframes between its PlayStation launches - at least that's the impression given by AMD, which manufactured the hardware powering the PS4.

CFO Devinder Kumar, speaking at the Bank of America Merrill Lynch Global Technology Conference, said AMD had made a real impact with the release of the PS4 in 2013. Around 2016, he added, AMD would again be a very different company. Although he may not have been referring specifically to a new console release from Sony, such devices are extremely profitable to AMD and it is always thinking about what's coming next.

"Three years before you introduce a product a decision is made to use a particular company. In this case it was AMD. Then you co-develop the product with funding dollars, mostly coming from our customers. When you introduce the product there are no R & D, sales and marketing expenses - however many dollars you generate fall to the bottom line, and that's what excites us," said Kumar.

Earlier this year Sony's software product development head Scott Rhode told MTV: "Very soon we'll start thinking about what we'll do next. That's the culture at Sony. We always have to do something that's bigger and better than what's already been done."

Sony UK boss Fergal Gara added that "It's probably a sign of the times and how much has changed in seven years, but I think the willingness and the appetite to pick up new technology fast has probably changed quite a bit." For the next few years, though, he said Sony will be putting its weight behind the PS4.

So, rather than waiting another seven years for the PS5, which would peg its launch in 2020, the fast-paced development of technology could mean the PS5 rears its head much sooner - but could it really be as soon as 2016? We suspect that even if Sony is able to shorten the time between its PlayStation releases, we'll still be waiting until at least 2018 before the PS5 becomes a realistic option.

Of course, we'll update this article as soon as more concrete details on the PS5 release date are available. Also see: Best games consoles 2015.

Sony PlayStation 5: PS5 design

Sony PlayStation 5 release date, price and specs UK

Concept images of the PS5 have already popped up on the web, including those used to illustrate this article (courtesy of David Hansson). We suspect it will retain the black box, blue light theme, but will be sleeker and more stylish than before. And if PlayStation Now is able to let it do away with discs, it could even be more compact too.

Sony PlayStation 5: PS5 specs

As you might expect, very little is known about the PS5's hardware. Going by AMD's enthusiasm over the PS4, we can only assume it will remain onboard the Sony ship for the PS5.

Something else that might become a 'thing' with the PS5 is virtual reality. Project Morpheus, a virtual-reality system that works with PS4, suggests Sony is looking in this direction for future consoles. Such technology should allow for truly immersive gameplay, allowing you to really feel as though you are in the game.

And PlayStation TV may also be important to the PS5's development. Could we see this wireless streaming functionality built into the PS5?

It's possible that PlayStation Now will allow Sony to remove the optical drive, although some sort of provision for offline gaming - perhaps a flash storage drive - would be necessary. Not everyone in the UK has constant - if any - access to super-fast broadband.

Without knowing exactly what's on offer, it's impossible to accurately predict how much the PS5 will cost. With the PS2 costing £300, the PS3 £425 and the PS4 £349, we can only assume Sony will stick around the £400 mark. After all, it has other consoles and gaming PCs with which to compete.

Nintendo NX in 2016 (2015-10-18 13:45)

There have been rumors concerning a new Nintendo console on the internet for quite some time. That's mainly thanks to a December 2014 Associated Press interview with Shigeru Miyamoto, creator of Mario and other iconic Nintendo games, who stated "While we're busy working on software for the Wii U, we have production lines that are working on ideas for what the next system might be."

There wasn't much else mentioned about the next gen console until Nintendo's press conference on 17 March 2015, where the company announced that they were going to be creating mobile games for smartphones and tablets.

As well as announcing the venture into mobile gaming, Nintendo's late Chief Executive Santoru Iwata said "As proof that Nintendo maintains strong enthusiasm for the dedicated game system business, let me confirm that Nintendo is currently developing a dedicated game platform with a brand-new concept under the development codename 'NX'." Before anyone could ask for further information on the new console, Iwata continued "It is too early to elaborate on the details of this project, but we hope to share more information with you next year."

This sentiment of keeping quiet was later re-iterated by Nintendo President of America Reggie Fils-Aime while on stage at Nintendo's E3 conference. He remarked "We'll talk more about our next system, code named Nintendo NX, more in 2016"

It makes sense for the company to start teasing a new console, as the Wii U seems to be Nintendo's worst performing console ever, selling only 10 million units in the two and a half years that its been on sale. Lets compare that to the PlayStation 4, which has been out for around a year and a half but has sold over 18.5 million units worldwide.

So, what do we know about the next generation Nintendo console dubbed "NX"? Read on and find out.

Nintendo NX console rumours: Design

There isn't much to go on, in the way of design. When the upcoming console was teased it was referred to as a 'new concept', which could mean an entirely new design. Opposing that are rumours that it'll have a similar design to the Wii U, but with enhanced capabilities. We cover that in more detail below.

Nintendo NX console rumours: Unique features

Nintendo has always done extremely well with not competing with the likes of Sony and Microsoft, and instead breaking away from what other gaming manufacturers are producing. Think back to the Nintendo Wii – when the Wii was first announced, it was welcomed by excited consumers because they hadn't seen anything quite like it before, and its technology that both Microsoft and Sony are still trying to perfect.

Nintendo described the NX as a "brand new concept" which could mean anything given Nintendo's track record. Talking about the NX, the late Iwata said "if you only expand upon existing hardware, it's dull". He followed up the comment with "In some shape or form, we're always thinking about how we want to surprise players as well as our desire to change each person's video gaming life."

With that being said, there are rumours that the new Nintendo console will come with a completely new control method. This is mainly because the screen-controller hybrid that shipped with the Wii U hasn't taken off like the company had planned, with many developers not using the hybrid controller to its full potential.

There are also counter rumours that suggest the next generation Nintendo device will have a similar design to the current Wii U, but with improved capabilities. Nintendo introduced a way for gamers to play games directly from the controller without the need for a TV, using the inbuilt touchscreen display. It's a popular feature, especially with homes that share a TV because it allows gamers to carry gaming when somebody else wants to watch TV.

But what about if you could leave home and carry on playing? As it stands, you have to be within proximity to the Wii U to play your game via the controller screen. Rumours suggest that Nintendo could be upping the anti, so to speak, working on a way to allow gamers to carry on playing even if they're not at home.

If Nintendo manufactures a console that has gameplay that rivals the Xbox One and PlayStation 4 and also allows you to play directly on the controller when you're away from home, that could be a winning combination. Sony offers Remote Play on the PS4 via a PS Vita but there's a split second of lag, which in some games makes the difference between life and death. Microsoft also recently released a similar feature for Windows 10 and Xbox One, though you have to be on the same network to be able to stream gameplay.

Nintendo NX console rumours: Processor

When it comes to the internal mechanics of the new console, there's not much online. There is some speculation that

the NX will use an AMD SoC, namely the x86 APU, just like the Xbox One and PS4. If it were true, it'd make it the first time that all main manufacturers would use the same chipset.

Could AMD's CFO Devinder Kumar have been referencing to the NX when discussing upcoming AMD products? "I will say that one is x86 and the other is ARM, and at least one will be beyond gaming ... They [the customers] are going to announce it and then ... you will find out that it is AMD's APU that is being used in those products" he said.

However, with this being said, another report claims that the Nintendo NX won't be as powerful as the PS4 (which means we can wave bye-bye to this). The report is based on tweets from Liam Robertson of Unseen64, a man with a great track record when it comes to insider info. He claims that the NX is "definitely not aiming to compete with the likes of PS4 on a power level". You can see his tweet below:

When asked by @RunJumpStomp "What makes you say that?" he simply replied "Talking to the right people :)". Until Nintendo officially announces the NX, no one can be completely sure of its spec, but judging by Robertson's track record and past Nintendo consoles, we think he's on the right track.

Nintendo NX console rumours: Games

So, what kind of games can we expect on the next-generation Nintendo NX console? According to one report, Nintendo is said to have started talking to third-party developers about the system at this year's E3 event. Apparently the developers reacted positively to the concept shown to them at E3, but no details about the concept device have been leaked.

The only games to have been officially confirmed for the Nintendo NX thus far are Dragon Quest X and Dragon Quest XI, courtesy of Square Enix. DQX was originally released for Wii U, 3DS and PC whereas the newer DQXI will be headed to not only the Nintendo NX, but also the PS4 and 3DS.

Nintendo on the other hand, has kept tight lipped regarding its upcoming Nintendo NX titles (as promised) but with a less-than-amazing E3 announcement, many gamers are starting to wonder whether the company has given up developing for the Wii U, and is instead turning its efforts towards making games for the NX.

Nintendo NX console rumours: Price

While there are no real rumours surrounding the price of the new Nintendo console, we can speculate about its price by looking back at previous console launches. Nintendo aims for its consoles to be cheaper than the competition – look at the DS and Wii. The Nintendo DS was only £99.99 when it came out and the Wii, even with the breakthrough motion technology it offered, was only £179.99.

Nintendo knows where the sweet spot lays with regards to pricing its consoles, whether it's handheld or tethered to your TV. Based on this, we can only assume that the next Nintendo console will be cheaper than Xbox One and PlayStation 4, possibly around the £200 mark.

Nintendo NX console rumours: Release date

With Iwata stating that more information about the new console wouldn't be released until next year, we're assuming that the NX will have a 2016 launch. Why? Simply because it looks like the Wii U isn't doing as well as Nintendo had hoped, and it gives the company a chance to generate some interest around the new console before launch, without waiting so long that the hype dies down again.

However, since this announcement, Iwata has sadly died, and it remains to be seen whether the executive shake-up will impact the console's release date plans.

Interestingly, Nintendo has announced that the upcoming Zelda game for the Wii U isn't coming out until 2016. Zelda developer Eiji Aonuma said that the development team has "discovered several new possibilities for the game" and would like extra time to "bring all these ideas to life". Could the company be waiting to announce Zelda so that both the game and the NX can be released at the same time? Nintendo has a habit of releasing a Zelda or Mario game alongside a new console, with the only exception being the launch of the Nintendo DS (in Europe, anyway).

More recently, an article by DigiTimes claimed that Nintendo is starting production of the next-generation Nintendo NX console as soon as October 2015 with a July 2016 launch date, and is looking to ship 20 million units in its first year of production. However, an analyst at Forbes disagrees with the report, claiming that the schedule is "insanely fast" and he coins a later release date, possibly Christmas 2016 or even 2017 depending on how much work has been done on the console thus far.

Top 100 gamecube games (2015-10-20 20:14)**P.N.03**

P.N.03 is a simplistic, stylish game focused on straightforward shooting and dodging, with you purchasing upgrades to improve your character. Nintendo had some problems with Japanese 3rd parties during the N64 era, and so really tried to rebuild bridges with companies like Capcom and Namco when releasing the GameCube. PN03 was the result of one of the deals that Nintendo struck up at the time, it was part of the hyped "Capcom 5" which were to be five big GameCube exclusives that cemented a new, close relationship between the two companies. Unfortunately it didn't quite work out that way, and most of the games ended up being ported to PS2 when Capcom got cold feet, but this, and Resident Evil 0 did remain exclusive. Its a fun, albeit uncomplicated game

Hunter the Reckoning

Gory multiplayer action game that is similar to Gauntlet, but with more RPG elements added to it. The game has you and (hopefully) three friends shooting and slashing your way through legions of bad guys whilst finding new weapons and leveling up. Its a fun diversion, but best played in multiplayer with friends, this GameCube port is a little downgraded from the Xbox.

Goblin Commander

This is a real-time strategy game where you need to direct your army of Goblin's to harvest resources and build structures to produce more units. The game gives you all the stuff you'd expect from its genre, and also allows you to manually control the big, lumbering monsters yourself whilst giving out orders. There aren't many of this type of game on the GameCube, so its fortunate that this one is more than respectable.

Smuggler's Run: Warzones

Objective-based offroad game with large environments and a fun 4-player mode. The gameplay merges variations of popular multiplayer staples like Capture the Flag (grab an item and return it to your base) and Flag Tag (hold an item for as long as possible without it getting stolen) with theme's involving smuggling contraband and avoiding the law. Its a game of high speed pursuits, and aggressive collisions.

Dr Muto

Quirky 3D platformer where you need to explore the different levels collecting Atoms (similar to "Shines" in Mario 64). The game gives you a lot of tricky platforms to navigate, as well as the ability to change into a variety of different animals with different abilities. The graphics look a little make-shift at times, and there is the odd camera issue here and there, but its still a good, if slightly flawed game.

ATV 2

4x4 racing game with mechanics somewhat similar to SSX, you do tricks in order to build up a bar that allows you to boost, and can also attack your competitor's to gain the advantage. The graphics here are reasonable, and all in all its a pretty fun diversion for a weekend.

NHL2K3

An excellent Ice Hockey game from Sega's US developers, Visual Concepts. The game controls well and looks great (for the time), its got good computer AI, a wealth of options, and in-depth gameplay.

Sega Soccer Slam

Fun arcade-style Football game from Sega with a focus on brutal tackles, fighting and special moves, with nary a Red Card in sight. The game has some nice, cartoony graphics, intuitive controls, and a first-rate multiplayer experience. There's also a nice Virtua Tennis-esque Quest mode to keep you busy.

Donkey Konga

A rhythm action game that came packaged with the GameCube's bongo peripheral, Donkey Konga basically has you beating the drums and clapping to the beat of popular songs. Its a pretty fun novelty game that's good to bring out at parties for some funny 4-player competition (and the drums aren't actually that expensive to buy anymore either).

WarioWorld

This is a fun and fairly simple beat-em-up game from cult-favourite developer Treasure. The game has you playing as anti-hero Wario as he bashes his way through armies of bad guys in a search for goodies. There's some minor platforming here to do and stuff to collect, and the fighting is intuitive and fun. The game is somewhat short and easy, so don't expect a masterpiece up to the company's usual standard.

Capcom Vs SNK II

Good fighting game pitting the characters of Capcom games against those of their rivals Snk. The game looks great and has a lot of modes and options you can choose that effect the fights in different ways. This GameCube version is slightly less accurate than the PS2 and Dreamcast versions and tends to be deemed as not tournament worthy, but for anyone who's not too serious about playing the game its still a lot of fun to experience with friends.

Phantasy Star Online Episode III

The third episode of Phantasy Star Online, and its a big departure for the series, with this one focusing on turn-based card-battling. The game has a main hub where you can walk around and interact with other characters and shop, and a missions list that you need to complete in order to progress the story. Missions take the form of card battles which take place on a grid, you take it in turns attacking each other, summoning creatures and moving. Its a good game, but bear in mind that its more a complex card game than RPG (unlike Baiten Kaitos for example).

Mario Party 5

Here we go again with yet another Mario Party game! By now you probably know the general set-up of the series, its a party game which takes the form of a board game with the players moving from space to space after a dice throw, at the end of each turn everyone plays mini games in order to get coins and bonuses. The game is fun for multiplayer but quickly becomes dull for those playing alone. Not much different from any other games in the series but at least presentation and graphics have been improved and it is fun.

Bloody Roar: Primal Fury

This is a very respectable 3D fighting game where all the characters can turn into powered up beast forms. Its not massively unique, but represents its genre well enough and is polished and fun, with nice art design. This iteration in the series is actually an updated version of the PS2 game Bloody Roar 3, with improved graphics and new characters.

Baldur's Gate: Dark Alliance

Classic hack n' slash RPG with an isometric viewpoint. The game includes a very well thought out experience and equipment system that leads to some deep RPG fighting and in-depth gameplay. The plot here is above average, and the game includes a cool 2-player co-op mode. I dropped this a good few places as unfortunately the game is a little inferior to the other versions.

Lost Kingdoms II

JRPG sequel that has you battling in real time and exploring the levels and villages to open up new locations on a map to progress through the game. The RPG is another card battler, but is unlike the others of its type on the system as its all action-based and in real-time. Essentially your character throws the cards to the floor in real-time and they materialise weapons for you to use, create AI monsters which fight for you, or make creatures that give you status effects (such as giving you health, or attack bonuses), as the cards are used up more are automatically drawn and allocated to the four face buttons. It feels a little low budget at times but is one of the more accessible and fun of its type on the system and has quite respectable art design, there's a fun 2-player competitive mode too.

Conflict Desert Storm 2

Tricky squad-based 3rd person shooter with a nice amount of attention to detail and measured gameplay that stresses vigilance. One of the more notable aspects of the game is its 4-player co-op mode that focuses on teamwork and communication where you and a group of friends fill each of the important squad roles.

Lego Star Wars II

Another fun and accessible release in Traveler's Tail's Lego series of tie-in games. These games have you playing through the plots of famous movies with a cast and environment consisting completely of Lego products. Gameplay is focused on action, with you shooting and slashing at the armies of enemies, solving very simplistic puzzles, and collecting tons of stuff. The best elements of the game's have got to be their humour and charm, and their fun 2-player co-operative support. There were two games in the series on GameCube, but this one covers the classic movies so its automatically better!

The Sims

Simulation game where you get to play god with the inhabitants of a small household. The game (created by the guy who made Sim-City) has you feeding, washing, and just generally taking care of virtual people, as well as designing and renovating their living quarters. There's a lot of customisation involved as well as a good amount of interactivity too. Its quite a compulsive experience if you get into it, but bear in mind that this game takes up pretty much an entire memory card!

Madden NFL 2005

A very good American Football game from Electronic Arts with all the features you'd expect for the time. This release was definitely an improvement over the previous year's offering, polishing up the defensive gameplay and greatly improving the graphics.

Vexx

Fun 3D platformer in the vein of Mario 64 that has you exploring levels searching for "Wraith Hearts" to open up new levels. The game has some good platforming action and fluid melee combat, the camera can be a little problematic at times (hence the game's placing), but all in all its a good game for fans of the genre. This GameCube version is noticeably superior to the PS2 release.

Aggressive Inline

This is an underrated Inline skating game that feels like a mixture of Tony Hawks and Sega's Jet Set Radio. For a game with such generic packaging and title the game actually has a lot of personality and style, with memorable levels and graphics.

Castle Shikigami II

Very nice scrolling shooter of the bullet-hell type, with great aesthetics and intricate bullet patterns. Here, you get bonuses for skimming close to the enemy bullets, and doing so powers up your attacks. The game was first ported to the GameCube, but later gained versions for all the major systems, this GameCube version is a very respectable port.

Extreme G 3

A pretty nice futuristic racer that really managed to surpass my expectations. This third game in the series brings the gameplay back to the original title, with the long, winding rollercoaster-esque feel of that game's courses making a reappearance, as opposed to the sharp turns of the second game (which to be honest I was always disappointed with). The gameplay is definitely some of the more polished in the series here, with a much better feel of control

than earlier games, and the graphics and art design are first-rate. Its a nice racing game for fans of the genre, but is totally overshadowed by the mighty F-Zero GX.

NBA Street V3

A good Basketball game from sports stalwarts Electronic Arts that builds on earlier games in the series and includes many refined customisation options. This release in the series includes famous Nintendo characters Mario, Luigi, and co as GameCube exclusives.

Need For Speed: Most Wanted

Another polished release from Electronic Arts, Most Wanted carries on the traditions of the Need For Speed series, including some exciting races through city streets and civilian traffic and a lot of car customisation and tweaking. The game has you roaming around looking for races to take part in and completing objectives to progress the above average story. This particular iteration in the series has a focus on exciting police chases.

True Crime: New York

Unfortunately The GameCube never got a port from the stellar Grand Theft Auto series, but it did at least receive the two reasonable True Crime titles, Sand Box games which have you playing the part of a police officer in the big city, arresting criminals and responding to calls for help (and often just causing havoc). This iteration, the second in the series, polishes up the gameplay a little and gives you a big city to police and explore.

Medal of Honor: Frontline

World War II themed first person shooter that has you storming the beaches at Normandy and pushing on into Nazi occupied Europe. Its a fairly linear action game with a focus on shooting and straightforward missions, it gives a good feel for the chaos of WWII (for its era) and definitely represents one of the true highpoints of the MOH series.

Freedom Fighters

3rd person action and strategy game set in an alternate history where Russia has occupied the US. The game has you working with resistance fighters trying to free New York from these invaders, you control the main character in 3rd person shooter style, but also give out simple orders to your AI teammates for back up. The game is well put together and does just enough of its own thing to make it stand out from the crowd.

Pro Evolution Soccer 2

Hyper polished football classic from Konami that really pushed the genre forwards to new levels of gameplay and control. Playability is high, the stadium detail and presentation is first rate, and the commentary well done. Unfortunately, oddly enough the game was never actually released outside of Japan, so its one for importing sports fans only.

Pac-Man Vs

This brilliant party game was a free extra included with many Namco games (Pac-Man World, R Racing Evolution etc etc). The title has you playing the classic Pac-Man game against your friends, with one person playing as Pac-Man himself whilst the others take the part of Ghosts. It puts the GameCube's GBA link-up feature to good use with the Pac-Man player getting the complete view of the stage via the GBA and the Ghosts trying to track him down using the limited-view television screen. A novel idea that's well-implemented.

Red Faction II

Very respectable First Person Shooter, certainly one of the more notable on the system. Red Faction II is a smooth and fast science fiction action game. The series' main draw at the time was in having dynamic, destructible environments, allowing you to shoot up and alter the play field. This aspect of the game was actually simplified here in this sequel, and the game feels a lot more scripted as a result, but there's still a lot of destruction to be had. The set-pieces, action, and weapons have all been polished and the 4-player mode is 1st rate.

Tak 2: The Staff of Dreams

Very well put together 3D platform game with a good deal of variety and polish. It does all the staples of the genre well, with a lot of platforming action, new moves to unlock, and puzzles to solve. The developers went for a more straightforward progression here over the original (which was more akin to Mario 64 in structure) but it all works pretty well and keeps the game moving at a good pace. The storyline is probably one of the more notable elements, its actually quite funny and engaging.

Baiten Kaitos Origins

Prequel to the earlier card-battling RPG on GameCube, Baiten Kaitos: Eternal Wings and the Lost Ocean. Like the original this one has you exploring towns, getting into battles and refining your deck of cards, but it also tries to be a little more open-ended than its predecessor. Its a very solid RPG exclusive for GameCube, but its focus on card battling may limit its appeal.

Star Fox Assault

Slightly disappointing Star Fox sequel, one of the results of Nintendo's then practice of farming out their popular licenses to 3rd parties, in this case Namco. The game is actually a lot of fun, its a rail shooter that carries on the traditions of the series well overall. It doesn't do anything particularly new, and the one area it does try to innovate (the on-foot missions) falls flat, but it looks fantastic and still provides a lot of classic shooting action. Where the game really does build on its precursor though is its 4-player mode, which has you running around taking shots at each other, and jumping into planes and tanks. Its far more polished and exciting than it was on N64, and is definitely one of the standout features of the game.

Luigi's Mansion

Very fun early game for GameCube starring Mario's less popular little brother, Luigi, in a Ghost-busting action adventure game. Here you need to explore the environments inspecting objects and looking for Ghosts to suck up with your vacuum cleaner. As mentioned its very fun, but comes across as a bit unfinished, its over very quickly (I finished the game in a little over 2 hours on my first go) but is brilliant while it lasts.

I-Ninja

This is an underrated 3D platformer from Argonaut Software, the company who co-developed the original Star Fox, and it has to be one of their most polished solo releases. The game is a sword-slashing Ninja affair with lots of dexterous moves and diverse gameplay. You run through the levels rail-grinding, grappling, and running along the walls whilst dispatching enemies with fluid combat and intuitive controls. The story and character design can come across as a bit generic, but everything else is very well done and leads to a game definitely worth checking out.

Mario Golf

Golf game from Developer Camelot starring many of Nintendo's popular characters. Whilst not a million miles away from the earlier N64 release, the game has all the features you'd want and expect from a golf game, its colourful, intuitive, and generally just has a lot of personality. There's also a many modes, both serious and more fantastical to check out.

Naruto Gekitou Ninja Taisen 4

This is a fantastic 3D fighting game based on the popular Manga. The game is a Japanese exclusive with dynamic, accessible gameplay and intuitive controls. This release in the series polishes up the gameplay mechanics further over its forerunners, and also adds in an excellent 4-player battle mode which works by adding a button that cycles through available targets when pressed. The game does a great job of bringing the characters to life, and is set in what is probably the point in time when the Manga was at its peak.

Mr Driller: Drill Land

Unfortunately yet another Japanese exclusive, this time a puzzler in the long-lived Mr Driller series. The premise is quite simple, you need to drill down the stages collecting air without getting crushed by blocks after you've undermined their foundation. Its a straightforward idea but really becomes addictive when you start trying to aim for high scores. This release in the series includes a lot of admirable extras. There are many different modes here that give a different spin on the gameplay (such as simplistic adventure modes, and treasure hunting where you need to avoid boulders rolling after you), and the presentation is very high.

Rayman 3

Another excellent Rayman platformer from Ubisoft. This one makes a lot of modifications to the series (Rayman himself has gone through some drastic personality changes), and is perhaps a little disappointing in longevity after the classic second game, but still has more than enough good points to outweigh the fairly minor negative ones. The game has some nice art design and graphical touches, with crazy psychedelic backgrounds and effects, and the GameCube version in particular has a bunch of nice extras over the other ports available, such as fun multiplayer GBA connectivity additions.

Resident Evil 0

With this prequel to the popular series of survival horror games (another result of Capcom's deal with Nintendo) the developers decided to try out a new gameplay mechanic where you control two different characters at once. The mechanic has you swapping between the characters and exploring the environment separately with them in order to solve puzzles and progress. Graphics wise this reverts back to the old-style 2D backgrounds, and the difficulty curve can be inconsistent at times, but the new gameplay elements lend a different spin on the usual hallmarks of the series and complements the tension and puzzle solving well.

Second Sight

3rd person shooter made by the old Goldeneye 007 and Timesplitters team with a focus on psychic abilities. You start the game off as a patient with amnesia, and as you play through the game the story unfolds through the use of playable flashbacks. New psychic abilities are also granted to you as you proceed, ranging from telekinesis and energy blasts to things like astral projection (allowing you to scope out areas from safety), and the ability to possess the enemy (which is always fun). The game had the misfortune of being released around the same time as Psi-Ops, a

very similar and slightly more focused game that ended up (unfairly) overshadowing it.

Billy Hatcher

A memorable platformer from Sega that is somewhat similar to the old N64 game Glover. Much like many of the 3D platformers of this era Billy Hatcher gives you levels with multiple objectives that you need to complete in order to progress (kind of like the Shines in Mario). The gameplay revolves around manipulating eggs that can be used to run over enemies or bounced around the stages over obstacles. The eggs grow as you squash fruit under them, and can be hatched to give you a helper animal that follows you around and can be used to solve puzzles. There's a few niggles here and there but generally this is a fun game that's pretty unique and has a lot of charm, there's even a reasonably fun 4-player mode thrown in for good measure.

Need for Speed: Underground 2

A nice arcade racer from Electronic Arts with a focus on story and car tweaking. Like other Need For Speed games of this era you freely roam around the fully explorable city looking for races to compete in and visiting garages and shops. Completing a set of objectives progresses the story and opens up new parts of the game. This particular Need For Speed goes for more of a Fast and the Furious vibe so fans of those movies should definitely check it out.

Star Fox Adventures

Rareware's only finished game for the GameCube, SFA started out as a completely unrelated N64 game named Dinosaur Planet that had been set up as their answer to Ocarina of Time before it ended up being moved to GameCube. In the transition between systems Nintendo forced them to convert it into a Star Fox game (allegedly much to Rareware's chagrin). The developers programming expertise and talent is very much on show here, with the game looking very impressive for its age (still some of the best graphics on the system), with first-rate fur effects and lush environments, gameplay is fun though not without the odd niggle.

Tony Hawks Pro Skater 4

Another great release in the trick-based skating series. For anyone who doesn't know, Tony Hawks games essentially put you into an environment with a set number of objectives (such as obtaining points by pulling off difficult tricks, or by collecting a specific number of items). This release was a big improvement over its predecessors, it expanded the environments greatly and offered a lot of longevity.

Final Fantasy: Crystal Chronicles

A spinoff of the popular series made especially for GameCube with some phenomenal art design and aesthetics. Unlike the main branch Final Fantasy games this is a real-time Hack N' Slash RPG. The focus here is very much on the multiplayer, which unfortunately requires four GBA's, but this set-up makes for some unique and interesting gameplay (thankfully nowadays getting hold of these old handhelds is actually quite cheap, so its definitely something that can and should be checked out). Bear in mind that the single player (and to an extent 2-player) doesn't quite work as well though, as much of the experience is based on the social and team work aspects.

1080: Avalanche

This is a Stylish snow boarding exclusive for GameCube with a focus on racing and tricks. This sequel moved away from the technical, sim-ish gameplay of the N64 original and steered towards more accessible, arcade style gameplay

in the vein of the SSX series. One of the more standout elements of the game is the titular Avalanche's, every few levels here you are thrown into a tense and exciting race against the elements, with you desperately trying to stay ahead of the rumbling, cascading snow as it piles up around you.

Baiten Kaitos: Eternal Wings

Card-based RPG from Namco with nice art design and a good battle system. The game has you navigating around the static 2D backgrounds (much like those of the previous generation's Final Fantasy titles) exploring, gathering information from people, solving minor puzzles, and looking for cards. The battling is turn-based and has you making a deck of cards filled with defensive and offensive capabilities, bonuses are given if you use only cards of the same number, or ones which follow each other in numbered sequence. The sound quality is a bit poor at times and the plot, whilst enjoyable is not super-original, but the battle system is novel and all in all its a good example of its genre.

Puyo Puyo Fever

Great release in the classic block-falling puzzle genre. Like its predecessors Puyo Puyo Fever has you matching up coloured blobs, clearing them away before they fill up the screen and trying to set up chain reactions to dump junk on your opponent's screen. This one adds some more modes and new gameplay features such as the frenetic "fever mode".

Gun

Impressive free-roaming action-adventure game set in the wild west. The game has you traveling around searching for bounties, horse-riding, and generally just getting into gun fights and trouble. Controls are well done, with an excellent slow-motion feature that makes it very easy to pull off some impressive-looking shots that would make even Clint Eastwood jealous. Everything's pretty polished, the world is big, it looks great and its a lot of fun.

Phantasy Star Online

Port of the groundbreaking Dreamcast game enriched with an admirable amount of extra content and levels. Phantasy Star Online is a hack n' slash RPG with a focus on team-work, customisation, and item collection, you get the choice of a lot of different classes and weapons, and the battle system (which has you fighting in real-time with timed button presses of variable strength) is fun and easy to get a handle on. This version of the game also has a 4-player split-screen mode that greatly improves the offline experience.

Hitman 2

Accessible stealth action game where you play the part of a retired Hitman who's been dragged back into the life of crime. The game is quite easy to get into as you can somewhat kludge your way through the missions at times. However, being that you get many bonuses and extras for taking your time and doing the levels properly (undetected and with a minimum of collateral damage) its still worth taking seriously, making it still quite rewarding to master.

XIII

An excellent first person shooter based on the Belgian Comic of the same name. The game has some very distinctive cell-shaded graphics and a strong Borne Identity-esque storyline taken straight from the comics (though very abridged). The gameplay is mission-based, with you going from location to location completing important objectives. Production values are high, with the likes of David Duchovny and Adam West supplying the voice-acting.

WarioWare INC

Warioware is a unique party game that hits you with strings of random mini-games each lasting a few seconds. In that short time you have to work out what you're supposed to do (based on a quick clue) and successfully complete said objective. The goals in the game are often funny (and sometimes downright weird, such as the nose-picking challenge) and the multiplayer is fun and frenetic, with an incredibly fast pace.

Mario Tennis

An excellent, colourful, and intuitive Tennis game starring the popular Nintendo characters of old and new. The game gives you a quality Tennis experience whilst also including a fine selection of entertaining and wacky courts that are each based on a different gimmick. The graphics here are an improvement on the earlier N64 title, and the 4-player action is great fun for groups of friends.

Battalion Wars

Action-packed strategy game where you manually control soldiers in 3rd person view whilst giving orders to your other units. The game has a lot of charm, and gives you lots of cool units to choose from with different strengths (as well as vehicles and such). Tactics come into play in regards to sending the right units into the right situations. Its a fun game which would've made for a pretty good action title even without the interesting strategy elements.

Tales of Symphonia

A very respectable JRPG from Namco that was originally created for GameCube but later ported. The game is largely a case of standard fare for JRPGs in story and gameplay, but its all very well crafted and very polished. The battle system here is fun and accessible, with battles taking place in real-time on a 2D side-view field with you manually controlling your character doing button combinations, its kind of like what you would expect from a simplistic fighting game. The game allows you to avoid battles, and it all moves at a fairly brisk pace.

Resident Evil: Code Veronica

A good port of the earlier Dreamcast game. Code Veronica was a long and ambitious release in the series, featuring proper dynamic 3D environments with camera pans for the first time (most of the classic games had 2D drawn backgrounds that you would navigate around). Its a big and memorable adventure for fans of the classic Resident Evil gameplay style of ammo-management, jump scares, and puzzle-solving.

Wave Race: Blue Storm

Bright and breezy jet-skiing sequel from Nintendo that has some excellent handling and water physics. The game has you racing between buoys vying for first place and pulling off impressive tricks and jumps along the way. The game doesn't have a helluva lot of gameplay improvements over its N64 forebear, feeling somewhat like an enhanced remake at times, but the graphical improvement is significant and the original had pretty awesome gameplay anyway so that's quite easily forgiven.

Metal Arms: Glitch in the System

Somewhat underrated 3rd person shooter that has you blasting your way through some tense, action packed stages as a little Droid recently reactivated. Its a polished game that gives you a variety of different guns and grenades to use, (many of which are a lot of fun), as well as loads of upgrades to purchase. The 4-player mode here is also definitely worth mentioning, with a plethora of excellent modes and arena's to play through with your friends. Each arena has a different set of robots that you can take control of which range in size and ability (hulking mech's, nimble

rocket-packed robots and flame-throwing ground units), and there's also a bunch of vehicles like tanks and airplanes to commandeer.

Chibi Robo

This is a nice little game that came out during the latter half of the GameCube's life span. Here you play as a small toy robot who's recently been purchased by a troubled family. Your job is to move around the huge house exploring and looking out for jobs to do, you generally just try to make the household a happier place. There's puzzles to do and upgrades to purchase as you progress.

Timesplitters Future Perfect

First person shooter sequel to the excellent Timesplitters 2. Here the developers attempted to make a more cohesive plot to hold the different levels together (reacting to an occasional criticism of the earlier games). They worked a lot on the graphics, adding more effects (such as copious amounts of bloom), and also included some nice new modes. Mostly I'd say it's a shining success, though I do still prefer the second game in the series truth be told, I felt it had a little more charm over this one, but honestly they're both awesome.

Animal Crossing

Simulation game from Nintendo with a focus on community and open-ended gameplay. The game begins with you arriving at a new village with very little to your name, from here you can work to buy new things (such as furniture), socialise with the NPCs, collect items, or do loads of customisation and design yourself. A unique and well made game for creative gamers.

Crazy Taxi

Very respectable port of the classic arcade driving game (a definite improvement over the dodgy PS2 version). Crazy Taxi is a pick up and play game where the aim is to take on passengers and take them to their destination as quickly as possible before a counter runs down. Mastering a set of moves (such as specialised boosts and skids) are the key to shaving off those valuable seconds, and driving recklessly gets you some monetary bonuses along the way. It's just pure arcade fun.

Killer 7

A very odd, very violent action-adventure title from the eccentric Goichi Suda (nicknamed Suda51), who would later go on to make the equally idiosyncratic "No More Heroes" series for the Wii. The game is a horror title that is somewhat difficult to explain in few words (but I'll try!). Most of the time you are in 3rd person view, with the game restricting your movement to a selection of pre-determined directions, you move around the levels solving puzzles, and can bring up a first person stationary view that allows you to aim and fire at oncoming monsters. The only thing I could compare it to is maybe D2 on the Dreamcast (though the similarity is slight). It's a polarising game but should be checked out by anyone looking for something a little unique.

Splinter Cell: Chaos Theory

The third release in the Splinter Cell series, Chaos Theory builds on the stealth action that the series is known for with improvements in AI and graphics and some cool extra modes. The game is a true hardcore stealth title, there's no blundering through the levels hoping to get lucky here, you have to be hyper-aware of your surroundings at all times,

making sure to stick to dark areas and make as little noise as possible. The GameCube version is a little downgraded from the original but is still definitely a worthwhile buy.

Harvest Moon: Its A Wonderful life

Harvest Moon is a sort of farming simulation game. You essentially buy seeds, plant crops and look after your livestock as best you can in an effort to succeed and prosper in life. This particular release also has you interacting with villagers and looking to find yourself a bride. A lot more fun than it sounds!

Fire Emblem: Path of Radiance

Strategy RPG from the classic Fire Emblem series of games. Though the series had already had a long history of success in Japan going back as far as the Famicom (NES) this was actually the first home console game in the series to arrive in the west (though there'd been some handheld releases). The game uses a turn-based battle system on a grid, with you giving out orders to each character in turn. Terrain and positioning play a part in the battle and characters gain experience and level up. Other than the battling this game has a lot of focus on a strong storyline, and the plot also plays out in a variety of different ways based on how you play the game.

Sonic Adventure 2

The GameCube port that nobody would've expected to happen just a few years earlier, Mario's main competition finally arrived on a Nintendo home console in the form of Sega's exhilarating Dreamcast platformer, Sonic Adventure 2. The game has a lot of variety and catchy tunes and memorable art design, the GameCube port is pretty good, whilst it has slightly weaker lighting and smaller Chao Gardens it has some improved polygon counts and bonus mini games in some areas. The first Sonic Adventure was also brought to GameCube but was not done half as well and should be avoided.

Mario Kart: Double Dash

Another fun multiplayer iteration in the popular racing series. Double Dash's main hook was to include two characters per car that you could swap between to pick up extra item boxes, as well as new character specific-abilities. The game goes for a more simplistic, accessible gameplay style with less focus on tactics and difficult shortcuts than its predecessors, and more on speed, dynamic turns, and handicapping to keep races close. The single-player mode is basic, showing none of the advances made by earlier games like Diddy Kong Racing, but thankfully the multiplayer racing is very fun, with the power-sliding mechanic in the game lending it a bombastic, arcade-like feel.

Metal Gear Solid: The Twin Snakes

Completely overhauled remake of the original PS1 stealth classic with many of the additions from later games added in as well as some all new cut-scenes. The original game was a action-stealth title from Konami that had you dodging and evading the guards and getting involved in memorable boss fights and set-pieces. This remake from Silicon Knights (creators of Eternal Darkness) is an admirable effort that does a good job of updating the game for the GameCube.

Skies of Arcadia Legends

Port of the excellent Dreamcast Pirate RPG with some graphical improvements here and there. Like the Dreamcast game this has some clever dungeon designs, nice puzzles, and a well thought out battle-system that includes ship to ship clashes. The story here is also pretty good, and definitely better than the average JRPG fare.

Mario Sunshine

Controversial Mario platformer that followed up the highly acclaimed N64 outing. Personally I think I come somewhere in the middle of popular opinion on this outing. Sunshine does come across as a little unpolished at times, with the game being a bit short and padded, and having an oddly inconsistent difficulty curve. Its more straight-forward than Mario 64, with fewer puzzles and no special caps, but the main new feature, a water gun that allows Mario to float and clean up graffiti is thankfully a lot of fun to use. I imagine I come across as negative here, but honestly it is a great game with memorable gameplay and colourful graphics, I just hold Mario games to a higher standard!

Viewtiful Joe

Capcom brawler that allows you to mess with time whilst laying the beat-down on the armies of fodder blocking your way. You do the usual beat-em-up stuff, clearing areas of enemies with combos of punches and kicks whilst dodging and evading attacks, but the game also allows you to slow and speed up time, which can be incorporated into your attacks, and used to solve some clever puzzles. A unique title with a lot of humour and charm.

Burnout 2

As far as I'm concerned this is the best car-based racing game on the console. This adrenaline-soaked arcade-racer has you taking risks (such as driving the wrong way down a one way street, or skimming close to traffic) in order to fill up a boost bar that gives you the ability to hurtle down the streets at dangerous speeds. The game is exciting, having a great sense of speed and some insane crashes. Definitely a big refinement over the original, it just feels more polished and less punishing.

Metroid Prime 2

Brilliant sequel to the earlier GameCube game, this time concerning Samus' counterpart, Dark Samus. The game has you exploring huge, sumptuous environments discovering upgrades for your weapons and abilities to open up new areas of the world. Its primarily an adventure game (aiming is largely handled for you using a targeting system) so don't expect a first person shooter here. This sequel does occasionally feel a little "more of the same" with slightly less interesting environments than the original, but anyone who enjoyed the first game will love this too.

Zelda: Four Swords Adventures

Incredibly fun party game from Nintendo that uses the GBA "connectivity" feature for sneaky 4-player shenanigans (each player requires a Game Boy to use as a controller). The set-up here is much like the classic Zelda games of old, with you traveling around dispatching enemies and solving puzzles in the dungeons, but a new spin to the formula is added by having Link cursed into splitting into four separate versions of himself, opening up the creation of a variety of new puzzles. The Game Boy Advance features are well implemented, with players falling down holes and such only to land on their GBA screen until they rejoin the action. Whilst admittedly the best things about the game involve you finding ways to trick and screw over your friends (hehe) its still fun to play on your own.

ReMake

This is a remake of the original Playstation survival horror title that had you exploring a creepy mansion of flesh-eating Zombies whilst conserving ammo and solving puzzles. Everything here in this remake has been completely redone. The new backgrounds are beautifully created and are truly a sight to behold, and some of the puzzles have been expanded on too. Fans of the series who found the changes of Resident Evil 4 a little drastic should definitely check

out this re-tooled old-school blueprint for survival horror's.

Donkey Kong: Jungle Beat

Possibly the most unique 2D platformer to come out of the generation, Jungle Beat was designed with Nintendo's Bongo peripheral in mind, an unlikely combination which actually works far better than you'd think. The Bongo's give a real interactive and kinetic feel to the gameplay, you tap on the drums to move left or right and clap your hands to grab at bananas, rapping on the drums whilst you're atop an enemy delivers an epic beat-down, its elements like this that really help to draw you into the experience. Levels themselves are inventive and fun, with you bouncing off walls and being thrown around the screen at a quick pace.

Super Monkey Ball

Sega got a raw deal during the 6th generation, they produced a fantastic console and provided a plethora of great games but alas it was not to be. Sega's misfortune however was to be Nintendo's gain, instead of having an extra competitor at launch Nintendo ended up with the latest Sonic game, Crazy Taxi, and this excellent little slice of Monkey madness bolstering up the early line-up. Monkey Ball is a lively and unique game in the tradition of Marble Madness, you have to roll balls around the courses by precisely pivoting the ground, avoiding all sorts of hazards along the way. Outside of the main game you get a bunch of accessible multiplayer party games to compete against your friends with, all of which are fun and original.

Kururin Squash

Another very unique experience, Kururin Squash is a clever puzzle game that was never released outside of Japan (though a GBA version did make an appearance). The game has you navigating a rotating stick through labyrinthine, constrictive levels trying not to touch any of the walls or hazards. It doesn't sound like much, but its actually a lot of fun and includes a lot of ideas, such as bumpers that change the direction of your rotation, and many other different abilities which come and go (one has you able to sink under water, another gives you an attack to deal with enemies etc etc). The game has bright and breezy graphics and some cool boss fights too.

Rogue Leader

Factor 5 return with this superlative 3rd person rail-shooter sequel, and this time they even get to use the dogfights directly from the classic film trilogy! Incorporating the sounds and missions from the movies really makes a difference here, with the already excellent gameplay really coming alive to a new level. Any fans of the films are sure to be humming along to the music and getting drawn into the action like never before. Note that this game is actually all included in the (otherwise disappointing) sequel, Rebelstrike, but only for 2-player co-operative, if you want to experience single player unfortunately you need this one.

Tomb Raider Legend

Tomb Raider returns revamped and rebuilt from a brand new development team. This time the game is from Crystal Dynamics, the Canadian company previously known for their Soul Reaver games. Sumptuous graphics and smooth control abound, with the game taking a lot of influence from the Prince of Persia series. Swing, climb and shimmy your way through the temples and set-pieces taking pot shots at the bad guys and solving some clever puzzles. Nice and very memorable game.

Beyond Good and Evil

Definitely has to be one of the more underrated games of its generation, Beyond Good and Evil is a lively action-

adventure game from French publishers Ubisoft. A lot of work and polish has clearly gone into the game, infusing it with great art design and some brilliant storytelling, including fleshed out characters and a nice plot. The world is ambitious for its time and there's a commendable amount of things to see and explore.

SSX 3

This is a real first-rate snow boarding game from Electronic Arts with excellent graphics, gameplay, and soundtrack. Like its predecessors SSX 3 involves racing other competitors whilst doing tricks to fill up a boost bar, the game builds on its forebears, really polishing everything up to the next level. There's another release after this one, "On Tour" that has some nice extras (such as having Mario as a playable character) but I felt that this slightly trumped it with better art design and style.

Ikaruga

Smart shoot-em-up from developers Treasure that breaths new life into the genre. The gameplay involves you swapping your ship between two colours, with you immune to bullets that share your current colour. Its a clever concept and the game is chock full of nice ideas, set-pieces and memorable moments.

Soul Calibur 2

Addictive 3D fighting game filled to the brim with longevity and content, with some great graphics and a very solid fighting system to learn. Each port of the game actually had its own exclusive character to play as, with the GameCube version arguably getting the best deal by including the ever-popular Link from the Legend of Zelda series! 3D fighters were in somewhat short supply on GameCube, but thankfully this one goes some way to taking up the slack on its own!

Pikmin 2

An excellent real-time strategy game from Nintendo where you command a group of walking vegetable-like creatures called "Pikmin". These creatures can be sent to attack monsters and carry raw materials back to their base to create more Pikmin (and at an alarming rate! given the planet's similarities to Earth I find myself wondering what happened to the human race? perhaps a plague of Pikmin wiped us out to use us as raw materials?!) Anyway, I digress. There are many different types of Pikmin in the game each with different abilities, and using their abilities to solve puzzles and strategise against enemies is the main crux of the gameplay. This sequel irons out the wrinkles of the original game admirably, its much longer, and the new inclusion of a secondary character cuts down on some of the backtracking.

Paper Mario: Thousand Year Door

Another accessible Mario RPG from Nintendo, sequel to the equally excellent N64 game. The battle system here is easy to get into, with the same focus on timed button presses and badge collecting as its predecessor, and the dungeons are a lot of fun, with a new factor of using your paper-like qualities to solve puzzles (Mario can fold himself into a paper airplane or boat to pass obstacles), each of these new abilities is helpfully "cursed" upon you by bad guys as the game proceeds. Packed with clever little touches and nice appeal.

Prince of Persia: Sands of Time

One of the biggest surprises of the generation for me, the Prince of Persia series came back with a vengeance with this highly polished and influential title from Ubisoft. The game is an action adventure that has you navigating your way through what has to be one of the most dangerous and complicated palaces ever conceived (god knows how anyone ever managed to live there without accidentally getting themselves killed). One of the most impressive

things about this game is how intuitive and well-rounded the control system is, traveling through the palace jumping, swinging, running across walls and holding onto ledges is a joy to experience, and the brilliant gameplay mechanic of turning back time (kind of similar to the old Fatal Rewind game) stops you from being penalised too much. This first game in the new series was the best, with later sequels unfortunately pandering to the lowest common denominator in an effort to increase sales.

Twilight Princess

One of the last major GameCube releases, Twilight Princess was a long time coming, in the end being released on both GameCube and Wii at the same time. After the controversial stylistic departure of its predecessor The Wind Waker, this game represents a call-back to the ever-popular Ocarina of Time, aiming for a more realistic fantasy look, as well as a longer campaign with more complicated dungeons. The graphical style suits it well and being such a late game in the system's lifespan it really shows off the GameCube's capabilities in a way that a Wind Waker sequel possibly wouldn't have been able to do to the same level. Taking a cue or two from Capcom's PS2 Zelda-alike, Okami, Twilight Princess has you taking on the form of a Wolf and leaping about areas ruthlessly dispatching enemies or sniffing out clues. Its a very classy release with fantastic art design and is a meatier adventure than the Wind Waker, but possibly less unique.

Eternal Darkness

H. P Lovecraft-inspired horror title from the Canadian developer Silicon Knights, a second party developer for Nintendo at the time. Eternal Darkness is a memorable and mind-bending game that has you taking part in different chapters taken from the "Tome of Eternal Darkness" a sinister book discovered by the main character whilst investigating the death of her Grandfather. Every time the main character reads a chapter in the book you get to play through the story yourself. Watching the plot unfold through the eyes of all these different characters is intriguing, and one of the most accomplished elements of the game. The other big draw here is the "Sanity Meter" a bar which decreases when horrible things happen, if it gets too low it starts to mess with the player in a variety of unsettling (and often funny) ways that are supposed to represent the player going mad. Its a very fun and quirky game.

Smash Bros Melee

Now here's a series that went through a big improvement in the transition from N64 to GameCube. Don't get me wrong, Super Smash Bros was a helluva lot of fun back in the N64 days and was a very unique concept, but it did have a few niggles here and there (juggling was just a little too easy for example). Melee tightened up the gameplay mechanics, making the balance feel a lot more polished, and this coupled with some new advanced techniques like wavedashing (an accidental exploit in the game's physics engine) make the game a far deeper experience. Even outside of that though there's a lot of improvements, the level designs in particular are awesome and very dynamic, with battles taking place in a variety of shifting, high speed environments such as atop a bunch of hot-air balloons, or in the middle of a race with you jumping from car to car! The Single player mode here is also much improved over the original game, which was honestly a little simplistic, there's a lot more content to see here, and its all structured far better. An admirable progression in all areas.

Timesplitters 2

Back in 2002 I rushed out and bought a GameCube, the main factor in this purchase? my excitement at the idea of getting a new Perfect Dark game (yeah... that didn't quite work out). Thankfully the old N64 Goldeneye Team ended up coming to the rescue and filled that void brilliantly with their Halo-killing (yup, I said it) Timesplitters series. Anyone familiar with Goldeneye will know what to expect, mission-based levels which require you to complete a set of objectives, lots of shooting action, and a fantastic multiplayer component are the order of the day. Unlike Goldeneye, Timesplitters has kind of a Quantum Leap-esque set-up, with each level throwing you into a different

time and place, one moment you'll be decapitating Zombies, next you'll be taking pot-shots at aliens or robots, this helps to keep the game fun and absorbing. Everything here is really packed with humour and charm (possibly the first and only time I will use that word to describe a first person shooter!), and the game has piles and piles of content and things to do and see.

F-Zero GX

For the GameCube iteration of their classic futuristic racing series Nintendo made the brash decision to hand over development duties to their former rival Sega, and wow was it a match made in heaven! Sega took the classic gameplay of the series, retaining its perfect balance of high speed and precision control, and infused it with the stunning graphics and stylish environments that were required to bring the series to the next level. But Sega's team didn't stop there, oh no, they somehow managed to make the game even more exhilarating and rewarding than ever before and packed it full of nice extras, really going the extra mile. Definitely one of the stand-out racing games for the generation on any system.

The Wind Waker

Definitely a new direction for the Zelda series, Wind Waker decided to go with a more cartoony style and a new focus on sailing, with you playing as the latest iteration of Link who's living after a huge cataclysm has drowned most of his world in water. Its a fun, imaginative and well put together release that will stick with you long after you've finished playing. There's some padding towards the end but the whole thing has so much charm and personality that this is quite easily forgiven.

Resident Evil 4

A huge departure for the series, this game represented the point where Resident Evil went from being a creepy, slower paced survival horror title to becoming more of an action focused game. Gone were the tank controls and pre-rendered backgrounds to be replaced with a behind the shoulder view and precision aiming. The classic Zombies also took a bit of a brake here with the main fodder enemies instead being victims of a stomach-churning parasite infestation. Overall the changes made for a very dynamic and accessible game filled with stunning set-pieces and a lot of excitement and tension.

Metroid Prime

After missing out on the N64 era Metroid was finally brought back here by new developers Retro Studios, a US company that had its roots in Iguana Entertainment (the company that produced the Turok games). Retro had much to prove when they took on the beloved franchise and thankfully they didn't disappoint, managing to recreate the feel and spirit of the original 2D classics perfectly here in 3D. Everything here is hyper-polished, the environments are memorable and beautifully rendered (with some of the most impressive graphics on the system) and power-ups such as the awesome grappling hook are a joy to use. All in all it just has to be my choice for the best game on the system.

horror movies list (2015-10-24 15:18)

- 1 Horror of Dracula 7.5 1958
 - 2 Sleepy Hollow 7.4 1999
 - 3 Curse of the Demon 7.6 1957
-

- 4 The Thing from Another World 7.3 1951
- 5 The Devil Rides Out 7.1 1968
- 6 An American Werewolf in London 7.6 1981
- 7 The Shining 8.4 1980
- 8 The Thing 8.2 1982
- 9 The Night of the Hunter 8.1 1955
- 10 The Exorcist 8 1973
- 11 The Curse of Frankenstein 7.2 1957
- 12 Invasion of the Body Snatchers 7.8 1956
- 13 The Omen 7.6 1976
- 14 Halloween 7.9 1978
- 15 The Innocents 7.9 1961
- 16 The Wicker Man 7.6 1973
- 17 The Haunting 7.6 1963
- 18 The Black Cat 7.2 1934
- 19 The Fog 6.8 1980
- 20 The Hound of the Baskervilles 7 1959
- 21 The Gorgon 6.5 1964
- 22 Dracula: Prince of Darkness 6.7 1966
- 23 Dracula Has Risen from the Grave 6.6 1968
- 24 Taste the Blood of Dracula 6.4 1970
- 25 The Changeling 7.3 1980
- 26 Pit and the Pendulum 7.1 1961
- 27 It 6.9 1990
- 28 House on Haunted Hill 6.9 1959
- 29 Them! 7.3 1954
- 30 The Brides of Dracula 6.8 1960
- 31 Dracula 6.4 1979
- 32 Dracula 7.6 1931
- 33 Frankenstein Created Woman 6.6 1967
- 34 Dead of Night 7.7 1945
- 35 The Creeping Flesh 6.3 1973
- 36 House of Usher 7 1960
- 37 The Time of Their Lives 8 1946
- 38 Abbott and Costello Meet Frankenstein 7.6 1948
- 39 Abbott and Costello Meet Dr. Jekyll and Mr. Hyde 6.7 1953
- 40 Abbott and Costello Meet the Mummy 6.5 1955

Top 100 dreamcast games (2015-10-24 15:27)

Sword of the Berserk

Starting the list we have this hack n' slash brawler based on the violent Manga by Kentaro Miura. Its a simplistic action game where you hack your way through the levels with your huge, oversized sword. The game is quite short, having a lot of emphasis on storyline and cut scenes (which are written by the Manga author himself). Probably best suited to fans of old-school beat-em-ups or of the Manga itself.

There weren't many good Football games on the Dreamcast, but this one is pretty respectable. Confusingly SWWS is actually the successor to the World League Soccer (Michael Owen) series of games rebranded as a Worldwide Soccer title, so it has few similarities to the classic Sega Saturn titles, but its fun nevertheless. Avoid the earlier non "Euro Edition" version as its noticeably inferior.

4 Wheel Thunder

This was an exclusive game made for Dreamcast in Midway's "Thunder" series of racers. Gameplay in the series revolves around you boosting by picking up capsules littered throughout the levels. The games also have a lot of emphasis on learning the best routes and shortcuts. This one has you driving Monster Trucks over a range of indoor and outdoor environments, its a solid, though challenging racer with a good number of tracks and options.

Super Magnetic Neo

Here we have a tricky platform game similar in style to the earlier Crash Bandicoots games. You run and jump through the long, winding 3D stages, ride animals, and do the occasional 2D platforming section. The main thing which sets this game apart is its magnetism mechanic. In the game you can swap between two different colours, if you're the same colour as an object it attracts you (for rope swings for example), whilst if you're the opposite colour it repels you, allowing you to bounce around the stages. You need to change on the fly, and changing to the wrong colour usually results in death! its a fun game if you can get your head around it but may frustrate if you can't.

Revolt

A good version of the 4-player remote-controlled racer from the PC. Revolt plays kind of like a Kart racer, with you picking up a selection of weapons to sabotage your opponents as you race through the oversized environments. Its a fun game with quite a bit to do and see (there's a pretty good Track Editor, a stunt mode where you collect stars etc). The game was downported to PS1 and N64 but this version is obviously a lot closer to the original PC game.

Dino Crisis

The survival horror genre is very well represented on Dreamcast, in fact so well represented is it that I had to spend some time trying to work out which games I wanted to make the list and which I just had to cut. In the end I chose Dino Crisis to represent in the bottom ten, sure its a PS1 port, but with its cleaner visuals and more stable graphics its unarguably the best console version of the game available (unlike Resident Evil 3 for instance, which is arguably better on GameCube), and the gameplay and voice acting are a little more polished than the Dreamcast's own decent survival horror title, Carrier. The game itself is basically like Resident Evil with Dinosaurs (and at this stage that comparison is so overused its become a cliché), you explore a big facility solving puzzles and evading Dinosaurs whilst conserving ammo. The puzzles here are well done, and are actually a little different in execution to those of the Resident Evil games, and there's a lot of memorable set-pieces and events.

Silver

A solid action RPG that has you searching the globe for magical Orbs that are necessary to triumph over evil and rescue your kidnapped wife. The story here isn't that inspired to be honest, but luckily the dialogue between characters is very well done and whoever produced the music did a real first rate job, helping to give the title a lot of atmosphere and mood. The gameplay here is fairly simple, but good, it would've strongly benefited from a co-op mode but unfortunately there isn't one.

Stupid Invaders

Stupid Invaders is a humourous point and click adventure game ported from the PC. In the game you explore, pick up and merge items, and solve puzzles (usually rewarding you with cut scenes). The story of the game surrounds a group of aliens stranded on Earth who are being terrorised by a lunatic. The graphics and art design are nice and the game is quite funny, there's a lot of instant deaths but you can save at any time so save often.

JoJo's Bizarre Adventure

One of the lesser known Capcom fighters but don't let that dissuade you. JoJo's Bizarre Adventure is a 2D fighter based on the popular Manga of the same name. Other than the usual stuff the main gameplay mechanic here revolves around the "Stand" button. This button usually calls forth an Avatar of the player and changes your stance and move set, but requires Stand gauge energy to sustain. Like all Capcom fighters the game is well constructed, has excellent art design and graphics, and the stand gauge manages to add a little variety to the gameplay.

D2

This cinematic survival horror game garnered mixed reviews at the time but in retrospect is one of the more memorable titles of the era, including some fairly surprising content. The game has you playing as Laura, a woman whose airliner has crashed in the Canadian wilderness. She and the other survivors find that the area they are in is infested with strange plant-like monsters that take the form of humans, Laura sets out to discover what's going on. The gameplay is varied, there's both 1st and 3rd person exploration sections, random battles where you gain experience points (these play kinda' like lightgun games), lots of simplistic puzzles to solve, and a lot of emphasis on cut scenes. It's a flawed game, and not all that long either, but is definitely an interesting title to check out.

Gundam Side Story

Strategic shooter based on the popular license. This has you giving orders to a team of mechs whilst you attempt to complete a range of mission objectives. Overall it's a polished game with good presentation and lots of blasting action.

Tokyo Extreme Racer 2

In this series of racing games you freely drive around a large city looking for other racers to compete against. Essentially you have a list of the local racing gangs and their members and have to find them, beat them and knock them off the checklist, opening up more of the city along the way. The game has a lot of customisation options for the car, with shops and money etc and has a good pickup-and-play vibe. This sequel represents a big improvement on the original.

Worms World Party

Turn-based strategy game where your team of Worms need to wipe out the competition using a variety of wacky weapons. The game was originally online but I believe this has long since ceased. Worms World Party is much like all the other Worms games really, except with better graphics and a few more options, being that the Worms series are multiplayer classics that's really not that much of an issue though.

Wacky Races

A respectable Kart racer in the vein of the ultra popular Mario Kart series which uses the very apt Wacky Races cartoon license. Thankfully the game tries a lot of its own things, and as such deviates from Mario Kart enough to make it notable in its own right. Here at the start of each race you get to allocate three different moves, the moves

range from homing attacks, to shields, boosts, and flight (as well as others), you collect coins along the route to pay to use these moves. This set-up lends some strategy to the game, as some courses may have shortcuts made easier by using the flight ability for instance, whilst others may benefit from boosting. The game is actually pretty good, there's tons of content and a very comprehensive single-player mode, it was made by the company that went on to produce the Sega Allstars Racing series.

Bangai-O

Enhanced port of Treasure's Japan-only N64 shooter. The game has you flying around the stages blasting enemies with 360 degree aiming, you get to swap between homing missiles and bouncing lasers, and there are some minor puzzle elements here and there along the way. The Dreamcast version has much better backgrounds, and less slowdown than the N64 game, as well as having some additional gameplay tweaks, and being that this version was released everywhere it's also translated. The translation is kind of nonsensical for the most part, fans of English will probably love it though.

Sega Marine Fishing

An excellent Fishing game ported from Sega's arcade machine that uses the Dreamcast's dedicated Fishing controller for extra authenticity. Basically the game works like this, you place the bait, shake the controller to lure in the fish, pull up the controller to snag them, and use the reel to pull them in. It might not sound great on paper but in practice it's good fun.

Bust A Move 4

Long-running puzzle series where the aim is to shoot and match up balls of a same colour to clear the screen before it fills. This version has some extra modes and options, it's not really much different to other Bust-A-Move games but is still a lot of fun.

F1 World Gran Prix II

Comprehensive Formula 1 racing game with all the stuff you'd expect from the genre, such as various weather conditions, a good pit crew, and well done physics and handling (for the time) and all held together by some nice, detailed graphics. Overall a respectable and polished racer.

King of Fighters 2002

One of the best King of Fighters games and a huge improvement over the previous year's effort. King of Fighters 2002 gives you a huge character roster of old and new favourites from the history of the series, and returns to the classic gameplay of old, ditching the "Striker" system and replacing it with some new Desperation moves.

Armada

A 4-player RPG which plays kind of like Asteroids with experience points and shops, set in an explorable galaxy of planets and deep space. You start off on your home planet, and it's here that you pick up mission objectives and plot points during the course of the game. The multiplayer is lots of fun, but less so the single-player.

GTA II

The second major release in the Grand Theft Auto series provided various improvements to graphics and gameplay whilst keeping the basic structure of the popular original. The game has you driving around the streets completing

missions whilst avoiding cops and gaining respect from the local gangs. In comparison to later games in the series these earlier games feel very different, at this stage its all a lot more straight-forward, arcadey and action-focused, with a lot more of a pick-up-and-play feel. The Dreamcast version is closer to the PC game in visuals and represents a big improvement over the PS1 port in regards to lighting and effects.

Tech Romancer

This oddly titled game is a 3D fighter from genre stalwarts Capcom, one of their more under appreciated titles. The game has you playing as a variety of Gundam-style mechs each with their own selection of weapons and moves. On top of the usual staples you can pick up and use items found on the ground that have defensive and offensive applications, as well as having access to a finishing move which can outright kill an opponent who's on low health. Definitely worth checking out for fans of both fighters, and big destructive mech's

Vanishing Point

Good looking arcade racer for the Dreamcast that starts off tricky with some of the earlier cars but soon pulls you in. The game is made up of a selection of championships set up for each car, completing races opens up new cars which in turn have their own championships to play through. This set-up forces you to get good with all the different cars, and keeps the game from becoming monotonous as you can't just pick one car for the whole game. Outside of the main modes the game also has some pretty cool extra's, such as the fun Stunt Mode that has you completing a variety of different challenges. Vanishing Point was originally designed for Dreamcast, but was later down ported to the PS1, avoid that version.

Red Dog

This one pleasantly surprised me, its from Argonaut, the team who created the Super FX chip for the SNES. Red Dog is an action game which has you controlling a tank, the game gives you a machine gun shot, as well as rockets which work in a similar manner to rail shooters (you hold the button and sweep the cursor across multiple enemies, let go and it fires off a volley of homing missiles). The interesting element of the gameplay here though is a reflective shield, if you can bring it up in time it will reflect enemy shots back to their source, and mastering this move is crucial to progressing. Some respectable graphics and nice boss fights also help to make it worth checking out.

NHL 2K2

Whilst the first NHL2K game on the Dreamcast was solid, it didn't quite live up to its siblings in quality, this however changed with the 2002 edition which represented a huge improvement. The AI here has been improved, the controls are deep, and the game is smooth and responsive. A great game for Ice Hockey fans.

Castle Shikigami II

One of the later official games released for the system (2004), Castle Shikigami is an excellent vertically scrolling shooter and a must for fans of the genre. Here the main gameplay mechanic involves purposefully cutting it close when evading the bullets, as when you are close to touching a bullet your firepower is hugely increased and you can gain more points. Its a graphically impressive game with nice aesthetics and a lot of replayability when striving for score.

Rainbow Six: Rogue Spear

Tactical first person shooter where you need to come up with a plan and direct a whole squad through the various missions. Unlike the first Rainbow Six on Dreamcast this supports the much-needed Mouse and Keyboard controls, creating a much more in-depth experience.

Maken X

Under appreciated First Person Adventure from the Atlus team most known for creating the Shin Megami Tensei series (and it shows). The game has you sword fighting in a first person perspective, allowing you to both block and rebound shots back at enemies (if you get the timing right). During the course of the game you can choose to take control of different characters, each of which have different strength and weaknesses and each of which lead you down different branching pathways. Unfortunately the localisation team made rather a mess of the game for its western release, its poorly translated and dubbed, has a lot of censorship, and has even been made harder, with the localisers removing health packs and adding health penalties for using certain moves! The US/Euro version definitely loses something, but is still worth checking out. The Japanese version isn't too difficult to play through as the menu's include a lot of English, but you won't know what's going on in the story.

NBA 2K2

Graphically impressive Basketball game from Sega and Visual Concepts which admirably lives up to the high pedigree of the the rest of their 2K series of sports games.

Sega Rally 2

Sequel to Sega's beloved arcade racing game that adds a lot more tracks, options, and modes. Sega Rally 2 is very much an arcade game at heart so don't expect an ultra realistic experience here, this game is all about sliding around corners at high speed and racing against the clock. The port to Dreamcast is respectable but visually disappointing (which is why it dropped a lot of placing's), its an early release and it shows still manages to be a lot of fun

Lack of Love

A very strange import game from the people who would go on to make Chibi Robo for the GameCube. In the game you play as a life form that is trying to survive and evolve, you do this by helping other creatures with their problems by using four different actions (speak, attack, sleep, and urinate), pressing the start button shows you which animals to focus on. Its a high-concept game that requires patience as there's rarely any obvious clues to follow, you just need to observe these creatures to try to get an idea of what they need from you, as such getting stuck is quite common. Definitely one for diehard game fans who like to try something different.

Demolition Racer: No Exit

This is a very enhanced update of the earlier PS1 game Demolition Racer. No Exit is a racing game built around destruction (its made by some of the same people who worked on the Destruction Derby series). Coming first here only gives you a points multiplier, its the points themselves that you need to win each race, and its smashing cars and causing pile-ups that afford you said points. So you essentially hang back gaining points off your opponents until the last lap, and then make a rush for 1st place. Its a novel idea that gives the game a nice level of originality and makes for some exhilarating races and action.

Cool Cool Toon

Import-only rhythm action game from SNK where you hold the analogue stick in specific directions whilst pressing buttons in rhythm to the beat. Its a good game with a lot of catchy tunes and nice aesthetics and backgrounds and is

also one of the few titles to support Samba De Amigo's Maraca controller (though its still a lot of fun with or without it).

Record of Lodoss War

This is a great hack n' slash Diablo-style RPG based on the popular Anime. Whilst the story unfolds you essentially run through the dungeons hacking at the hordes of monsters and recruiting AI-controlled party members to help. The deeper part of the gameplay involves searching out and collecting runes, these runes can be combined with the equipment for various effects and stat boosts. Its a good RPG for fans of the more western-styled RPGs but may disappoint those looking for a more familiar, cinematic JRPG.

Mr Driller

Puzzle game from Namco where you need to drill through the ground, being careful not to get crushed by falling rocks. The main element of the gameplay here is to not just survive, but to work out the best way to collect all of the air as you make your way down, maximising points, and its this element that adds longevity to the experience. The Dreamcast port is higher resolution, and slightly higher colour than the PS1 game, but unfortunately that's about it for extras.

Shadowman

Creepy Action-Adventure game based on the comic book from Valiant. The game has you traveling through the underworld searching for Dark Souls, once collected these souls power-up the character and allow access to previously blocked areas. Its an atmospheric game with good puzzles and a memorable setting. Out of all the ports this is the best console version of the game available, better than the respectable N64 version (which has worse sound and framerate), and leagues ahead of the poor, rushed PS1 version.

Cannon Spike

No-nonsense 2-player top-down shooter from Psikyo and Capcom that stars a variety of their characters, (Mega Man, Cammy, Arthur from Ghost's n' Goblins etc). You get 360 degree firing with a target-lock, a screen clearing move to get out of dangerous situations, melee moves and a powered up attack. For the most part its simply all about dodging bullets and destroying bosses. A polished and fun arcade game.

Elemental Gimmick Gear

2D Action Adventure that's in the vein of earlier Zelda titles, except with 3D boss fights. In the game you play as a stranger who was found long ago in suspended animation inside a strange mech-suit, after a long period of sleep you suddenly wake up with total amnesia. As mentioned earlier the game plays like earlier Zelda games, you explore, you find health upgrades and new equipment and gain new abilities to progress. You get a punch move, as well as a very useful spin attack which uses up energy. Its a well made game that's a good example of its type, with good aesthetics, music and art design, unfortunately though the translation work here is poor, its not so bad that it detracts too much from the gameplay but it's noticeable.

Outtrigger

A first person shooter from Sega that is similar to Deathmatch fps games like Quake 3 and Unreal Tournament (though really its very much its own thing). The game doesn't really focus on weaponry much and is mainly about power-ups, straight action, and collecting coins. In the game you get a point for each kill, but another can be gained by picking

up a coin that's dropped after the kill. The cramped, layered design of the levels facilitates a lot of last minute coin steals from other players, thereby lending the game a slightly different feel to the other first person shooters out there. Outtrigger looks good, plays well in 4-player and runs extremely well, with the framerate staying consistent. There are a plethora of control options, with "D1" representing the standard Dreamcast FPS controls.

NFL 2K2

Acclaimed series of American Football games that introduced on the Dreamcast to high praise. NFL2k games represented the high point of the time in the sport, with great gameplay, graphics, and impressive (for the time) AI. The game is full of excellent options including a lot for player customisation, and the Dreamcast version has support for VMU play calling, so you can choose tactics without your opponent knowing.

Resident Evil 2

Classic survival horror game where you explore a city overrun with Zombies whilst solving puzzles and trying to avoid a gruesome death. You get multiple characters to play this time around and the plot is more interesting, with voice-acting that's much improved since the first game (which was so bad it was funny a lot of the time). Sure this is just a PS1 port, but that game was one of the best on Playstation, and this is the best port, featuring higher quality FMV's over the later Game Cube release, as well as more options and a VMU health display, which was a nice touch.

Soldier of Fortune

In the absence of a proper release of Half Life (near finished copies can be downloaded but the game was never officially released) I'd say this provides the best FPS campaign on Dreamcast. Soldier of Fortune is a no-nonsense shooter that was known at the time for its attempt at doing area-specific gore. The game has an emphasis on action, with you rushing through the levels dealing death and destruction. Soldier of Fortune isn't going to blow you away, but its polished, looks reasonable and plays well, and like all the best FPS games on Dreamcast benefits a lot from Mouse and Keyboard support.

Hydro Thunder

Hydro Thunder is a water racing game in the vein of Wave Race ported from the arcades. Like 4 Wheel Thunder the game is part of the "thunder" series of racers, where you collect capsules which give you energy to boost for a short period of time. Hydro Thunder actually looks pretty nice for an earlier title and plays well, with many shortcuts to discover and a good amount of re playability.

Guilty Gear X

Accessible 2D fighting game from Arc System Works that has some awesome graphics and art design. Guilty Gear X is a likeable, very combo-heavy fighter that's easy to pick up and play but isn't too shallow either. The Dreamcast version is pretty much arcade perfect.

Ill bleed

A quirky survival horror game that almost defies description! Ill bleed has all of the usual aspects you'd expect of the genre, puzzle solving, item management, and combat, but tries to do its own thing in other areas which results in a memorable experience. The game is set in an evil theme park that's broken up into levels, with each level being a pastiche of a horror film staple (crazed killers out for revenge after the death of a loved one, evil dolls, mannequins, Remorse worms etc etc its all here). In most levels is hidden something called a "Horror Monitor" this device warns you of danger spots, and can be used to mark them down thereby rendering them harmless. Where the title shines is

in its offbeat nature, whether you're trying to help an evil cake find the perfect topping, of shooting at a ring-dropping demon version of Sonic the Hedgehog there's never a dull moment! Ill bleed is not for everyone though, there's certainly the odd misstep with the gameplay and some dodgy execution here and there, but personally I find it a flawed gem.

Rush 2049

Futuristic racer from Atari and Midway ported from their popular coin-op. The game has you racing through cities at high speed searching for elaborate short-cuts and flying off ramps into huge jumps. Midway did a very good job with the Dreamcast conversion, it looks great and has contains a lot of modes and extras, including an excellent 4-player battle mode.

Cosmic Smash

Import-only arcade port that plays kind of like a Tennis game mixed with Breakout. You hit the ball back and forth trying to destroy blocks, sometimes the blocks move, and sometimes they are obstructed by indestructible blocks, each stage has a time limit and when the time runs out its game over. The game is quite bare bones as an arcade port, but is fun, accessible, and has re playability.

Mars Matrix

A bullet hell shooter from Capcom, Mars Matrix covers the screen with almost ornate patterns of bullets for you to navigate through. The game gives you a normal shot as well as a Shotgun short-range blast, and allows you to grab the enemy bullets and throw them back (the longer you hold the bullets for, the longer the time for the next charge up will take so its worth grabbing and throwing them quickly). As usual Capcom provide a polished and well-crafted game.

Puzzle Fighter 2: Matching Service

Popular block-falling puzzle game with a Capcom Fighting game theme. Here you need to match the blocks up with the corresponding trigger to clear them, and as usual setting up combo's hurts your opponents even more. This is like the earlier release for Saturn and PS1, but with some nice additional modes that mix things up a bit, and an online feature that's unfortunately no longer functional.

Virtual Fighter 3tb

Early Dreamcast 3D fighter (a launch title in Japan) from the popular series. Like earlier games in the series, Virtual Fighter 3 is a technical fighter that rewards mastery. New additions here include sloping, uneven ground for the arenas, as well as the option of a team battle. Its a good game, but does sometimes show its status as a launch title and is strongly superceded by later games like Soul Caliber.

Sega GT

Sega GT was Sega's big attempt at a Gran Turismo competitor, overall its certainly no Gran Turismo but i'd say its a mostly successful endeavor in the genre. The game gives you lots of cars, good handling, and a plethora of options. Its a very respectable release and doesn't look too shabby either.

Confidential Mission

This is a great lightgun shooter with a very James Bond-esque theme. Its a balanced game, it looks pretty good, and it throws in enough other elements (such as objectives which lead to branching paths) to make it stand out as one of

the better lightgun games of the time. On top of the main mode you get a lot of extra content here including a bunch of cool minigames and variants to try.

Bomberman Online

Criminally overlooked, no-nonsense bomberman game with surprisingly high production values and lovely presentation. In these games you have to place bombs to blow up your opponents whilst being careful not to die yourself, a perfect, and timeless concept for multiplayer shenanigans. Bomberman Online focus' completely on this multiplayer element, there's no half-assed attempt at a campaign mode here, just a big tournament of rounds with boss fights (much like the 16-bit games). Thankfully The designers didn't completely rest on their laurels though, there's loads of new modes here each of which put a new spin on the classic gameplay and complement the range of older maps well. The game is no longer online, but still plays fantastically offline.

Under Defeat

Polished vertical scrolling shooter where you can direct your fire to the right and left and lock your aim in place by holding the fire button down. Other than the aiming system the game gives you a helper that you can release by pressing the fire button when a bar to the side of the screen fills, this helper comes in a range of different types, and can be changed by picking up the relevant power-up. The game has very nice graphics and a huge amount of attention to detail, with very nice animation (watch as the trees on the ground react to the explosions around them for instance). A very good Dreamcast shooter.

MDK2

A challenging 3rd person shooter and sequel to Shiny's popular earlier PC title. This time its Bioware doing the development duties and thankfully they don't disappoint. The gameplay here has a lot of different aspects to it, the main character, Kurt's levels consist of running, gunning, sniping and throwing grenades and such, Dr Hawkin's levels are mainly platforming and puzzle solving, and a robotic Dog with a jetpack named Max provides short range gunplay. Its a tough game with a lot of twitch gameplay that's aimed at hardcore shooter fans so expect to do levels multiple times before you get them right. A later PS2 version arrived with an easier difficulty curve, but had inferior controls and graphics (resolution, lighting, filtering).

Zero Gunner 2

Another excellent Shoot-em-up from the arcades flawlessly ported to Dreamcast. Zero Gunner is an action-packed shooter that gives you full 360 degree rotation to deal with enemies that rush you from all directions. Great bosses, great graphics, and whilst hard at first the 360 degree movement works flawlessly with practice and is a very fun gameplay mechanic.

Puyo Puyo Fever

Another excellent addition in the puzzle series, Puyo Puyo Fever keeps all classic gameplay of the earlier games whilst adding in some new gameplay elements here and there such as the frenetic "Fever" mode to increase the tension and keep the game fresh. The Puyo Puyo games are a series of block-falling puzzlers, you have to match up Puyo's of a similar colour to clear them from the screen before they pile up and kill you, setting up a domino effect dumps more junk on your opponent. Other than the gameplay changes this goes for a new 2.5D look, with nice animation and some pleasant revolving background effects.

Fatal Fury: Mark of the Wolves

Beautiful 2D fighter from SNK that is often considered to be amongst the greatest fighting games they've ever produced. The game looks fantastic and plays well, dumping the plane switching mechanic of its forebears and putting more focus on feint moves as well as a "Just Defend" move which is similar to the parry move in Street Fighter III (if you push back at the exact moment of contact here you do a block which gains you a little health). Avoid the western release of the game if possible as the localisation created issues with the game's sound.

Tony Hawks 2

Enhanced port of the classic Playstation skateboarding game. Essentially you have to ride around exploring the environments completing objectives and racking up points by doing a variety of tricks, its a unique and addictive concept. This version has improved graphics for the Dreamcast but isn't exactly pushing the system so I dropped it a few places, make no mistake though its a phenomenal game and a lot of fun.

Daytona 2001

Pseudo sequel/remake of the classic sega arcade game. Daytona 2001 contains graphically revamped versions of all the courses from both the original Daytona and CE, as well as three new race tracks designed specifically for this game and a bunch more modes and features. For those unfamiliar with the series, Daytona is a racer with an emphasis on speed and over-the-top powerslides (done by quickly changing gears), its a bombastic game which requires a helluva lot of practice to fully master but is very rewarding to learn. Excellent with a steering wheel.

Headhunter

Stealthy action-adventure game that was billed as an answer to Metal gear Solid but came out just a little too late, only just getting a Euro release for Dreamcast. The game is pretty impressive for its time, with nice graphics and a big open world for you to travel around to get from mission to mission. Gameplay has you solving puzzles, getting involved in gunfights, stealthing lackeys (admittedly sometimes doesn't work as well as it should), and riding around on a Motorbike. The storyline is pretty good, with a lot of tongue-in-cheek satire and fake adverts (similar to the original Robocop movie) and there's many memorable set-pieces too. A good PS2 port is available with only a few minor downgrades to shadow effects and control as its only real detriment.

Ecco: Defender of the Future

After a long hiatus Ecco the Dolphin returned to gaming, and this time in full 3D. This is a challenging action-adventure game where you swim through the ocean exploring, solving puzzles and helping sea-creatures whilst traveling back and forth through time and to alternate future's in an effort to deal with "The Foe". The game has great graphics and is thick with atmosphere, its tricky to get a handle on at first but after some initial effort it grabs you in and you'll want to reach the next area to see what happens. There's actually a PS2 port also available which was made easier and more straightforward, those who tend to get lost in these types of games may be better off with that version to be totally honest.

Ooga Booga

Underrated 4-player title that stands as easily one of the best party games on the system. The game has you collecting fruit which can be used as projectiles or to take control of Totem poles littered around the levels (they basically act as your own personal guard towers). You get a melee attack, and are also able to commandeer animals such as wild boars or birds to help you lay the smack-down on your enemies. Outside of the main mode you get others, such

as the equally brilliant "Boar Polo" that has you knocking a boulder through the opponents goal. The game has a weak-ish single-player, but the multiplayer is great fun, and the game is packed full of humour and charm.

Project Justice: Rival Schools 2

Capcom's manic and colourful sequel to their earlier 3D fighting game for Arcade and original Playstation, Rival Schools. The game plays a little like their "Vs" series, but in 3D, with you able to pull off aerial raves and call in back-up during the match from your two teammates in reserve. Its accessible, and over-the-top fun.

Ferrari F355 Challenge

Here's a nice racing game from Sega which manages to aim for realism whilst still retaining that classic Sega Arcade game look and atmosphere. The game looks great and has an inordinate amount of attention to detail in the cars and the way they handle. A slightly graphically downgraded version is also available for the PS2.

Starlancer

Good looking Spaceship game ported from the PC by the people who made the acclaimed Wing Commander series. Here you fly around following (and giving) orders, taking part in dogfights, and/or protecting defenseless ships from attack. The storyline changes as you progress and there are many branching pathways to see based on how well you do. The controls here are very complicated but work adequately well with practice and make for some exciting dogfights. Starlancer also has an online multiplayer component which plays well, and its actually one of the few titles which still works online today even after all these years!

Rayman 2

Port of the classic 3D platformer that had you jumping and grappling your way through the levels with Rayman, solving minor puzzles and riding around on rockets. This Dreamcast version is often considered the best version of the game available, sporting a rock-solid framerate and some improved texturing and additional environments over the PC version. An excellent example of how to make a 3D sequel to a 2D game.

Toy Commander

Quirky Mission-based game that has you controlling a huge variety of different toy vehicles, ranging from land-based tanks and jeeps to airplanes, bi-planes and helicopters amongst many others. You control these toys around a house completing a variety of novel missions such as dropping sugar into a cup or dealing with a rampaging monsters in Rabbit-costumes. The game also has a very good 4-player dogfight mode that gives you full choice of all the vehicles and a number of different modes.

Typing of the Dead

Sega coming out with yet another madcap idea for the dreamcast, here they have converted their well-loved lightgun shooter House of the dead 2 into an entirely different game that makes full use of the keyboard peripheral. In the game the usual Zombies lumber towards you, but now they each have a sentence hovering over them, you need to type the sentence out before they reach you to dispatch the Zombie. The concept actually makes for a very fun, intense, and original experience, all whilst improving your typing ability!

Soul Reaver

Another classic game from the PS1 generation that's been improved for Dreamcast. Soul Reaver is an imaginative and moody action adventure game which has you playing as the recently reincarnated vampire Raziel trying to get revenge on those who wronged him. The gameplay has you exploring the world gaining new abilities which allow you access to new areas, the combat is well done, with a lot of fun elements (you can throw the Vampire's into direct sunlight or carry them and impale them on spikes for instance), its full of well thought out puzzles and the storyline is interesting and well directed. This version sports improved graphics over the PC game, with slight improvements to texturing and polygon count, as such its the best version of the game available.

Border Down

This definitely has to be the best of the officially released horizontally scrolling shmups on Dreamcast, and by no small margin. Each level here has three slightly different versions (or borders), and every time you die you get booted down to a lower version of the level, drop off the bottom border and the game is over. As standard you get given a rapid fire shot (hold the button down) or a slower homing shot (press button) and its wise to swap between both moves regularly, outside of that you get the usual power-ups and some intense boss fights.

Test Drive Le Mans

Precise, sim-ish racer from Melbourne House that's packed full of attention to detail (you can even do the full 24hour race in real-time!). Le Mans is a well crafted game with some of the best graphics on the Dreamcast, with clean visuals and excellent reflection effects and filtering (reportedly being the only game to use the hardware's Anisotropic Filtering). A later PS2 port was also made but had a few graphical downgrades so if you have both systems go for the Dreamcast.

Capcom Vs SNK 2

Feature-rich 2D fighter from Capcom that has their main characters taking on those of rival fighting company SNK. The main gameplay inclusion here is the ability to choose from a large variety of "Grooves", you get different abilities depending on which groove you choose, so with one Groove you may be allowed to block in mid-air for instance, but not parry, whilst a different Groove will give you custom combos or a different type of Super. The game is one of the more impressive looking fighters on Dreamcast due to incorporating 3D backgrounds, and is pretty much arcade perfect due to the Dreamcast sharing hardware with the original arcade machine the game was from. Out of the ports the PS2 version is also very good, but less so the later GameCube and Xbox versions.

Space Channel 5

Quirky rhythm action game where you try to keep in time with the onscreen prompts. The game has you playing a space reporter Ooh La La as she tries to save the station from aliens by taking part in a dance-off!

Unreal Tournament

An excellent first person shooter ported from the PC, and yet another excellent reason to invest in the Dreamcast's mouse and keyboard peripherals. The game is a very well balanced multiplayer deathmatch focused title, and its easy to see why it became so big on the PC. You get a lot of quirky weapons here, each with their own tricks and tactics, and a lot of balanced stage layouts (the Dreamcast port especially has stacks of maps). The online component of the game unfortunately no longer functions, but there's a good 4-player split-screen mode available and whilst some stages have lower-ish frame rates there are just so many stages that do run well (Damnation, Loathing, Paladin, Flux, Depot, Sector 9, Core etc, etc), that you're never short of smooth levels to choose from.

House of the Dead 2

Classic lightgun game that's a stalwart in arcade parlours the world over. Basically a town is overrun with zombies and it's your job to clean up the place. The gameplay is the usual light-gun fare, the Zombies lumber towards you while you desperately try to put them down with a headshot, civilians with death-wishes jump out in front of you at inopportune moments and spout mildly risqué-sounding English, and the bosses are big and exciting to battle. Definitely one of the most important and popular Lightgun games out there, and the Dreamcast port has some nice extras too.

Virtual On: Oratorio Tangram

Dash around the environments shooting off volleys of shots, taking cover and charging into hand to hand melee's in this 2-player Mech combat "Vs" game from Sega. It's a complex, intense game that's best played with the elaborate "Twin Stick's" controller it was designed for, but can be played reasonably well on a pad. Supports split-screen and Link-Up

Fur Fighters

Large and imaginative platforming and shooting game from Bizarre Creations (Project Gotham Racing, Geometry Wars, the Club) that's in the vein of Rareware's N64 titles like Conker's Bad Fur Day and Jet Force Gemini. The game has you exploring the large environments searching for kidnapped babies. You get multiple different characters with different abilities and have to swap between them during the levels to progress (babies can also only be rescued by characters of the same species). It's just generally a smart, funny game that gives you lots to do and see. A later PS2 port is also available that had some added novelties (the most notable of which was voice acting), but was downgraded in pretty much all other areas (notably texturing, resolution, load times, controls, and draw distance), so I'd say it's probably best to stick to the Dreamcast version.

Street Fighter III

It was a long time coming but when Street Fighter III finally did turn up it did it with style and panache. The main addition here over the earlier games is a system of parrying which allows you to take no damage if you push forwards at the moment an attack connects (as opposed to just blocking which still causes you some damage). The art design here is phenomenal, with the game being full of great backgrounds and fitting music. The Dreamcast actually had all three of the major iterations of the game released on it, with "Double Impact" including the first two versions, and "Third Strike" getting a standalone release. Third Strike is the more popular version, but Double Impact has its own look and feel and is very well ported so it's also worth checking out. Final note, the DC version of Third Strike is based on a later, less popular revision of the Arcade machine that is rarely played in tournaments, so if you're looking to go out and play the game competitively you may be better off with one of the other ports.

Sonic Adventure

Whilst Sonic Adventure is probably one of the more dated of the games on the list (hence placing just outside the top 20), this launch title remains a very fun (though occasionally troublesome) experience full of hefty amounts of ideas, and some very imaginative level designs. The game gives you an overworld to explore, the platforming is dynamic and exciting and there's even a variety of different characters to use. The sheer scale and spectacle of this game running back in 1999 cannot be understated, it was mindblowing, there was nothing quite like it out there with this level of speed and exuberance.

Phantasy Star Online

Ambitious attempt by Sega at creating an online console RPG. The gameplay revolves around forming a party of characters to take on the various dungeons as a team, whilst gaining experience and discovering and buying new items. The battle system is active and real-time, you simply run around the levels hacking, shooting, and casting spells, each attack has multiple strength levels and timing is important for combos. There's a lot of optimisation options here with a character editor tool as well as a decent number of different classes and races to choose from each with different strengths. Unfortunately these days whilst possible to play the game online its a bit of a pain as all of the official servers have long since closed down, leaving you only unofficial options, the game can be played offline but without the social aspects it loses something.

Dead or Alive 2

Fast-paced 3D fighting game from Tecmo with a system based around countering as its main gameplay mechanic. The game is fast, fluid, and well animated (ahem), it has the usual emphasis on combos and moves but does it all well and looks fantastic.

Quake III

Here is a very nice port of the fast and furious PC classic. The game looks excellent, runs well, and has all the required features such as Mouse and Keyboard support (a must if you want to play the game properly), 4-player split screen support, and even online deathmatch (which happily, like Starlancer is actually still functioning!). The game is a violent and intense first person shooter that is focused mainly on deathmatch, the arena's are well designed and the imaginative weapons are an absolute joy to use.

Virtua Tennis 2

Fun and accessible arcade Tennis game from Sega with an emphasis on being pick-up-and-play. The Virtua Tennis series are pretty much the most beloved series of Tennis games out there, perfectly straddling the line between realism and fun, whilst providing a lot of options longevity.

Grandia II

Sequel to the classic Saturn and Playstation RPG. Grandia II puts the game in full 3D and gives you a new cast of Geohounds (mercs) and Priestesses to meet. The RPG has a unique and clever combat system that's turn-based, but has the characters moving about in real-time by themselves, which leads to a focus on timing in addition to the usual RPG tactics. In comparison to the DC's other famous RPG, Skies of Arcadia, Grandia feels a little linear and straightforward, with Skies being the better game to explore, but I'd say Grandia is the one with the better battle system. The game was later ported to PS2 but avoid this version, unfortunately it was a buggy rush-job.

Powerstone 2

Awesome, underrated 4-player fighting game from Capcom. In Powerstone 2, players run around 3D environments fighting, and picking up and using weapons or vehicles whilst searching for the titular Power Stones. When three Power Stones are collected you are transformed into a more powerful form for a short period and given devastating moves. The game makes for an excellent party game, with its changing, evolving Smash Bros-esque stages keeping the gameplay tense and exciting while the Power Stones keep things interesting.

Samba De Amigo

Samba De Amigo is a bright and fun rhythm action game with good music and visuals that oozes with charm. The game comes with some special Maraca controllers which you have to wave and shake about at specified points to the rhythm of the music.

Marvel Vs Capcom 2

Frenetic 2D fighting game that pits the most popular characters of the two companies against each other. Marvel Vs Capcom follows the basic mold of most Capcom fighters such as Street Fighter, but is generally much more loose and over-the-top. The game pits two teams of three against each other, with the player being allowed to switch characters mid-fight, as well as call for help. MvC fights are anarchic, with huge screen-filling tag-team attacks, big combos, and aerial raves. The amount of content here is good, with lots to do and many characters to unlock. Many ports exist, but the Dreamcast version is the best of its time because (like Capcom Vs SNK 2) the game is from the same arcade machine that has similar hardware.

Crazy Taxi

Another weird and well-executed concept from Sega. Crazy Taxi has you playing a Taxi Driver trying to ferry passengers around a big city, as soon as you pick them up you're racing against the clock to get them to their destination as fast as possible and refill the timer. The game gives you a variety of different techniques to master, such as boosts and skids, and is very addictive, like many Sega games it just has that pick-up-and-play feel down to a tee. Out of the versions I'd say this is the best, with the GameCube coming very close, later ports lose licensed elements.

Shenmue

Hugely ambitious game for its era, Shenmue reportedly had one of the largest development budgets of all time at release, and by no small margin! The game is about Ryo Hazuki's search for his father's killer, and is essentially like a sand-box game, giving you full reign to explore your home town at your leisure. Gameplay mainly revolves around information gathering, 3D fighting, completing mini-games, and taking part in quick-time events. The game is very cinematic, and attempts to really immerse the player in its world, allowing you to work, buy trivial items, or even hang out at the local arcades playing full version's of Sega classics like Space Harrier and Hang-On. Out of the two Shenmue games on Dreamcast I decided to rate this one lower, but they are very different games with different strengths, the first Shenmue being more homely & personal in comparison to its louder and more bombastic sequel. Sonic Adventure 2

Excellent sequel that was a lot more polished than its predecessor. Like the original this has you playing with multiple characters, with the main campaign being split between three different game types; Sonic's high speed platform stages, Knuckles' exploration stages, and Tails' shooting and platforming levels. All three modes are fun (though there are certainly a couple of duds), with Sonic's twisty, turning paths, gravity changes, set-pieces and rail grinding creating a lot of exhilaration, and Knuckles' big open, atmospheric levels being memorable to explore (meteor herd and the Mario Galaxy-reminiscent Mad Space being the standouts here). The game has lots of replay value as you're graded on your competence and given nice extras for full A-Ranks, and there's also a plethora of fun multiplayer options and even a "Virtual Pet" mode that has you raising and leveling up the game's cute "Chaos" creatures. A good GameCube port of the game is also available, but there's some tradeoffs between the two versions (GameCube has higher polygon counts but worse lighting, more multiplayer race maps but downgraded Chao gardens etc).

Metropolis Street Racer

Brilliant racing game that is pretty much the prequel to the highly rated Project Gotham Racing series. The game has you racing around tracks based on London, Tokyo and San Francisco, but the big difference here is its incorporation

of a system based around "kudos". Essentially you not only have to win races, but you have to win them with style by taking risks, skidding around corners, and avoiding collisions. Whilst very similar to the later PGR titles MSR still retains some personality of its own, its a harder game for one, and its soundtrack from Sega stalwart Richard Jacques gives it a very different, bright and breezy atmosphere. Other features such as a real time clock that changes the time of day in the game based on what the actual real-world time is are also welcome, and likeable ideas.

Resident Evil: Code Veronica

Getting the eagerly anticipated "next gen" Resident Evil game was a real coup for Sega at the time, with the game creating its fair share of hype. Happily it didn't disappoint, Code Veronica was the longest and most ambitious of the older Resident Evil games. It was a huge undertaking, with lots of emphasis on storyline and tons to do, cinematics were impressive for the time and the game represented the series' first foray into true 3D backgrounds as opposed to the earlier 2D backgrounds. For anyone searching for a meaty adventure to sink their teeth into.

Ikaruga

Very clever vertical shmup from Treasure where your ship can swap between two different colours at the press of a button; you can absorb enemy bullets of the matching colour whilst the opposite colour will kill you. This leads to some nifty navigation and colour swapping to make it through the tougher sections of the game and is a cool idea that breaths some new life into the genre. Outside of the gameplay mechanics we have the usual hallmarks of the genre, lots of action, lots of dodging, lots of set-pieces, and memorable boss fights, all complimented with great art design that creates an epic feel.

Chu Chu Rocket

This definitely has to be one of the best, and most elegantly designed puzzle games of its era. The key to a good puzzle game is in creating a simple and accessible concept with layers, and Chu Chu Rocket achieves this effortlessly. The game has you leading mice to your base by placing three arrows on the ground at a time (during the puzzles there are often other limitations), whilst making sure to lead cats away from your base (and preferably into your opponents bases). Every now and then a rule change will occur forcing you to adapt to the new status quo. The 4-player here makes for an excellent party game, with friends vying for top place, re-routing each others careful planning, and disposing of cats in enemy bases.

Skies of Arcadia

The Dreamcast didn't have a hell of a lot of RPGs during its short lifespan, but luckily this excellent steampunk RPG from Sega's Overworks team (the makers of the Phantasy Star games) was a real standout in its day. Skies has you playing as a band of pirates who fly airships to and from floating islands. The game's battle system is respectable, giving you both on-foot battles and memorable, large-scale ship to ship battles, but its the exploration elements and excellent dungeon designs and clever puzzles that are the real success story. As usual presentation and storyline are also top notch, with likeable characters and well done music.

Jet Set Radio

This is a very stylish platform game which has you forming your own gang of graffiti artists and then competing with rival gangs in tagging the city. At the beginning of each area you are given a map showing various points, the aim is to reach these points and spray out some art whilst avoiding police and keeping stocked up on spray cans. The game is a ton of fun, is a unique experience, and helped to popularise Cell-Shading with its superb art design and presentation.

Rez

Yet another Dreamcast game with beautiful art design where you can really feel the love and attention to detail that the developers have heaped onto it. I'm not going to try to ramble on about "synesthesia" here, so I'll just say that this is a brilliantly artistic rail shooter that combines audio and video perfectly to create an exciting, imaginative, and unique experience. Every true fan of gaming should try this game out at some point.

Soul Calibur

One of the most stunning games of its time, Namco went the extra mile with this critically acclaimed arcade port from their Soul Blade fighting series. The game has you fighting 1 on 1 with melee weapons in a 3D arena, like all such games you need to learn each character's specific combo's and work out the best tactics. Not only did Namco improve the graphics here from the arcade version, but they really packed this with content and extras, there's an astonishing amount of modes available, characters to unlock, and things to do here.

Shenmue II

After the groundbreaking Shenmue Sega came back with this, an even more big and ambitious game. Shenmue II eschews the more laid back hometown of the first game and throws you into a huge, bustling city full of crime and intrigue, with gangs and opportunistic individuals around every corner. The main gameplay here is similar to the original, being largely about information gathering, mini-games, 3D fighting and quick-time events, but it feels more focused, and does a better job of pushing you in the direction you need to go (which could be considered a good or bad thing depending on the player I guess). Like its predecessor the game really excels at immersing the player in its world, and characters.

Top Nintendo 64 games (2015-10-28 19:58)

Iggy's Wrekin' Balls

Kicking off the list we have this odd 2.5D racing game that has you racing a variety of balls around courses of loops and ramps. The only game I can think of to compare it to is the SNES title Uniracers, except here you have a grapple hook to use instead of a focus on doing tricks. The game is a lot of frantic fun on multiplayer with four friends, but the single player experience can be a little lacking at times.

Mace: The Dark Age

This is a 3D fighting game from Midway, the creators of the Mortal Kombat franchise. Mace is a weapons-based fighter which plays like a mixture of Mortal Kombat, and Soul Edge. Its a general combo-based 3D fighter with some nice graphics, competent gameplay, and crowd-pleasing finishing moves.

NHL 99'

Smooth Ice Hockey game with good controls, good multiplayer, and lots of fighting. NHL 99 is based on the foundation of the earlier Playstation game NHL 98, but with the gameplay tweaked, graphics improved, and a few of

the programming issues ironed out.

Dr Mario 64

N64 update of the popular NES puzzle game. The aim of Dr Mario is simply to eradicate virus', you do this by placing capsules of the same colour adjacent to them. This iteration is similar to the original, but includes a bunch of new modes. The game is to play fun alone, but the new 4-player mode is the addition that most stands out.

V-Rally 99'

This is actually a belated port of the Playstation's first V-Rally game, which was an arcade style rally game in the vein of Sega Rally (rather than one focused on realism). V-Rally was a fun game which offered tons of content and longevity. This port has some alterations to the courses, and some minor tweaks here and there, but overall comes off as inferior to the original in the graphics and audio department. All in all its a valid choice for fans of driving games, but the tradeoffs with the Playstation original make it somewhat a mixed bag.

Gauntlet Legends

Here we have another excellent 4-player title, this time its an arcade port of a hack n' slash dungeon crawler RPG, sequel to the 80s classic, Gauntlet. Gauntlet Legends has you moving through the levels killing monsters, using spells, and leveling up. The main gameplay draw here is the teamwork, and camaraderie of bringing your friends along for the adventure, Its a fun, but brainless title. The N64 version is a good port of the original, much better than the Playstation version (which only supports 2-players), but weaker than the later Dreamcast release, which included elements from the sequel.

Nuclear Strike

This is another great release in the "Strike" series of games, a series which started out during the 16-bit era with the release of the popular Desert Strike. Nuclear Strike continues the gameplay style of its predecessors, with you flying around the stages trying to complete objectives and generally just blowing stuff up, its generally just a fun action focused game. This one also has you controlling a selection of other vehicles, such as Tanks and hovercrafts to give some variety.

F1 World Grand Prix 2

Definitely one of the better formula 1 games on the market at the time, F1 World Grand Prix is a polished N64 exclusive. The game looks great, handles extremely well, and does a very good job of recreating the depth and precision of the racing sport.

Command & Conquer

A very late port of one of the most important real time strategy games ever made, a title which created huge waves on its original release. C & C has you mining minerals, building up your base, and creating troops to fight against the enemy, its a system pioneered in the earlier game Dune II, but tweaked, and popularised here, which went on to inspire countless other games (Warcraft, Starcraft, KKND etc). To make up for the late arrival this version's graphics have been redone in full 3D, and there's some new N64 specific missions. Unfortunately the lack of mouse control hurts the game a little (as always for console strategy games), and there's no multiplayer support, but its still a fun, in-depth, and interesting game with some decent additions.

Indiana Jones & the Infernal Machine

Here's a Tomb Raider-esque action adventure game from Lucasarts. The game has you playing as Indi as he jumps and climbs his way through the levels searching for artifacts, it looks good and plays pretty well too. When originally coming to the PC, Infernal Machine was a clunky, hard to control, and buggy game, luckily however when it came to porting the game to N64 Lucasarts decided to bring in genius German game developers Factor 5 (makers of the Rogue Squadron series) for the job. Factor 5 tightened up and overhauled the controls and pretty much added a new layer of polish to everything, even including some new graphical effects! Overall a very playable Tomb Raider alternative.

The New Tetris

I know, Tetris is Tetris no matter what system its come for, but credit where its due the game is a puzzle classic that pretty much has to be mentioned. The New Tetris keeps the gameplay of the series intact, whilst improving the presentation and adding a few new modes of its own (one notable addition being the new, extremely fun 4-player battle mode). All in all its a great version of one of the most elegantly designed games in the history of the industry.

NFL Quarterback Club 99'

American Football game from the developers of the Turok series. The Quarterback Club series focuses on realism, depth (with a lot of work put into the AI) and graphical fidelity, with the hi resolution graphics of the series very much standing out at the time. This 99' addition of the game tightened up the gameplay over earlier releases.

Extreme G

Futuristic racing game where you ride bikes through rollercoaster-esque tracks picking up weapons and firing off rockets and such. Extreme G is a little rough around the edges, starting off a bit overwhelming, but it has an exhilarating illusion of speed, a lot of atmosphere, and is a rewarding experience for anyone wanting to take the time to master it. The game is obviously inspired by the popular Wipeout series, but it has a very different dystopian-inspired feel to it, and the tracks have more of a vertical, topsy-turvy bent to their design.

Duke Nukem 64

This is a good port of the classic first person corridor shooter. Duke built on the formula laid down by Doom by adding a lot of interactivity and humour to the genre, whilst also being a little more ambitious with the level design. This version of the game plays very well, but unfortunately is censored (the original could be pretty raunchy at times), and was a little dated by the time it was ported to N64 (GoldenEye was already out by this stage). On the plus side though is the excellent addition of a splitscreen co-op mode, and a very respectable 4-player deathmatch feature (neither of which made it into the other console versions). Other quirks worth mentioning are some new weapons, some layout changes, and some new 3D models for some elements.

Top Gear Rally

Early rally game which might not look amazing, but has fun, well rounded gameplay, well designed tracks, and good arcade style handling. For its time Top Gear Rally had a notable amount of content and options, ranging from car colour customisation, to changing weather and a variety of different modes. The creators obviously put a lot of work into this, whilst still making sure to get it out on time, its a polished racer which entertains but doesn't astound.

Doom 64

This is a cool N64 exclusive Doom game. Doom 64 plays very much like earlier games in the series, you basically search for keys to open up areas whilst shooting some nasty looking monsters, but here they've also added some puzzles to the levels to make it a little more interesting. The graphics of Doom 64 are very much improved, with new, more frightening monster designs, and a lot of spooky lighting effects to keep you at the edge of your seat. At the time reviewers criticised Doom 64 for its use of "dated" 2D sprite enemies, but honestly these days without the shadow of "progress" to worry about, the thing which is most noticeable is how smooth and fast the whole thing runs in comparison to a lot of other N64 first person shooters.

Ready 2 Rumble Boxing

This is a quirky, fun boxing game that doesn't take itself too seriously. The controls here are well thought out, giving you all the necessary moves, it plays fluidly, and the inclusion of super moves help to make the game stand out against other boxing titles.

Battle Tanx: Global Assault

Vehicular combat game which has you driving around in tanks. Another tremendous multiplayer experience for the N64, Global Assault has fantastic control, a good variety of weapons and different tanks, and a lot of different modes to play in, including a Co-Op campaign mode to go along with the usual Deathmatch and Capture the Flag modes. The single player here is a little weak, and can get repetitive after a while, but is fun enough in short bursts, its all about the multiplayer where Battle Tanx is concerned. Note, the Playstation game is not really the same game, it has completely different maps and story, and is a much weaker game.

Turok

This was an important early first person shooter for the N64, not only did it show up during the system's early game drought, it also showed that the console could cater to the more adult gamers out there. The game is a comic book adaptation that has you searching for artifacts and coming up against a variety of Dinosaurs. Turok is a little dated in comparison to some of the later first person shooters on N64, there's a lot of close fogging cutting down your viewing distance, and jumping sections can be tricky (make sure you get into a habit of staring down at the ground when you jump), but its big strengths are still as apparent as they were when the game arrived. Turok is a fast, smooth game. Running through the environments jumping and climbing has a great feel, its much more kinetic and lifelike than anything found in its console contemporaries. The extra work the developers did on the animation here also helped to make the world more immersive, and gave the weapons a bit more kick.

Hybrid Heaven

One of the few worthwhile RPGs on the N64, Hybrid Heaven has you making your way through an alien base trying to thwart a conspiracy to take over the Earth. The game is a mixture of exploration, and the sort of simple puzzle solving you'd find in an action adventure game. The battle system here is an interesting, 360 degrees real-time affair which kind of plays like a prototype to the system in Vagrant Story. You shuffle around the areas in real time choosing different melee attacks, and defence options. Each limb actually gains experience independently. Overall its a competent RPG, the setting can be a little bland at times, but the game plays well, with a lot of unique elements, and the plot is fairly developed and entertaining.

Tom Clancy's Rainbow 6

Tactical strategy/shooter where you have to kit out a team of counter-terrorist operatives and then plan out and supply them with orders to complete your mission. The game is both an in-depth, realistic, stealthy action game, and

complex strategy all in one, with you switching between first person shooter style action one moment, and giving orders the next. A tense and unique N64 experience.

All Star Baseball 2000

Iguana Entertainment (the makers of the Turok series) really stepped up their game with the 2000 edition of their N64 Baseball series. Here Iguana tweaked the gameplay, included many more options, and improved the already impressive graphics to create an intuitive, highly polished Baseball game.

Pokemon Puzzle League

Unfortunately there were never really any true Pokemon games made for the N64 (a fact made even more annoying when taking into account the RPG drought the console had). Out of the cash-in's this Pokemon themed sequel to the SNES classic Tetris Attack is by far the best, being built on the foundation of what was already a great game, just now with Pikachu's face plastered all over it. The Tetris Attack games are puzzlers where the aim is to arrange blocks into three of the same by swapping them with their neighbour, the gameplay here is as fun it ever was, and there's a bunch of new gameplay modes added here too.

Snowboard Kids

Fun multiplayer orientated racer that plays like Mario Kart on ice (those wanting a serious snowborder should look to 1080 instead). Snowboard Kids has you sliding down mountains picking up colour-coded power-ups which are red (projectile weapons), or blue (various items such as shields). You can hold one of each at a time. The graphics are a little ropery, and single-player is nothing special, but the gameplay has a lot of its own nuances (most attacks can be evaded with skill for instance), and the balance and handicapping make for exciting competition, with the multiplayer mode often reaching sky high Mario Kart 64 levels of fun (in this one area I actually prefer it to Diddy Kong Racing). Definitely one to check out for party play with a bunch of good friends.

Quake 64

After the huge success that was Doom, developers Id Software decided to go Medieval for their highly publicised successor, Quake. Quake is a corridor first person shooter where the aim is pretty simple, kill monsters and find keys to open doors. The game is just exciting, gory, brainless, fun. Monsters are grotesque and do their best to make you jump out of your seat in fear, and the atmosphere is thick, creepy, and feels almost Clive Barker inspired. The N64 port is good but not great, the texturing is simplified and indistinct (make sure you turn off filtering in the options), but the game is fast and smooth, and its water and sky effects were improved from the PC original.

Duck Dodgers

This is an excellent 3D platformer from Paradigm, the developers of Pilotwings 64. Duck Dodgers is a very fun title that has you running through all the platform game staples in a search for Atoms. Level design is put together very well, there are a lot of very fun items to use and puzzles to solve throughout the game, and the style and humour of the original cartoons is very much recreated. So if its so great, why's it in #75? Well, there are a few elements that aren't that polished, the camera for instance can be a pain (I'd recommend putting it on manual), and the framerate can be choppy (it gets better as the game progresses though). All in all though its a great game that fans of 3D platformers should try out, and a must buy for any fans of the cartoon.

Forsaken

Enjoyable, but tough first person shooter that's reminiscent of the old PC game Descent (kind of plays like Doom, but in a craft that flies instead of being on foot). When you get the hang of controlling the craft its an engrossing game with a lot of smooth shooting action, and a good 4-player deathmatch mode. What some may not realise is this isn't strictly a port, as the N64 game actually has completely different levels to the PC original, and the Playstation port (which should be avoided).

Top Gear Overdrive

This is a nice, fast, arcade style racer for the N64 with great atmosphere, a lot of style, and Grungy rock music that complements everything perfectly. The game gives you over-the-top crashes, blazing boost pick-ups, and loads of shortcuts to learn. Outside of that it looks great with the Expansion Pak, and has good 4-player support.

International Superstar Soccer 98'

For me this was simply one of the best footy games of the time. ISS 98' is a fast, smooth, and responsive title with loads of moves and intuitive gameplay. The game dominated the competition until the appearance of ISS Pro Evolution on the Playstation.

Fighter's Destiny

What a strange, unique 3D fighting game! This seems to have more in common with the karate games of old than it's peers of the time. There's not really a health bar here, you can win a round in one move just by completing a throw, or pulling off a special, but everything here revolves around gaining points. You need 7 points to win the match, and throwing will only give you 2 points, whilst dazing someone and then doing a finisher will give you 4 points, so all in all it balances out. Due to the nature of 1-hit-wins, matches between skilled opponents regularly turn into tense stand-offs between players each looking for an opening so they can decisively beat their opponent. The game is not for traditional fighting fans, but those looking for something different may find they appreciate it.

Yoshi's Story

Simple platforming sequel starring Yoshi as he navigates platforming stages searching for fruit. Yoshi's Story is a bit disappointing in comparison to its predecessor on SNES, but its still a game full of charm that contains the hallmarks of classic Mario platforming, with loads of fiendish jumps and memorable boss fights. Where the game falls down most is its longevity, its a little too easy overall, especially if you only play the preliminary levels (getting enough hearts in each stage opens up a load of optional, harder levels to play), but its still very fun while it lasts.

Star Wars Episode 1: Racer

Take the futuristic racing game Wipeout and make it easier and more accessible and you get an idea of Episode 1 Racer. Ep1 goes with wide courses and low penalty for edge scraping, the game's main mechanic is a boost system whereby you have to charge (by pushing up) for a certain amount of time and then let go and accelerate, this allows you to move at higher speed until you touch an edge (or blow up from overheating!). The game starts off a little too easy, but things pick up quickly and reveal a challenging game with excellent presentation, good amounts of content, and great courses.

Duke Nukem: Zero Hour

Exclusive Duke Nukem game made by ever reliable UK developer Eurocom. With this game Eurocom decided to go with a 3rd person view and an emphasis on straight-forward shooting action. The series went through the transition

fairly well, with the new view allowing for some new jumping sections and a higher emphasis on taking cover and such. The game is a good length, and is packed with items and equipment to learn and use (the gas mask is especially useful). Overall one of the better Duke Nukem episodes.

Mario Golf

A fun Golf game made by Camelot, a company known for their popular Hot Shots Golf series on Playstation (to be honest Mario Golf practically is a Hot Shots Golf game, just with Nintendo's famous characters in it). The game is accessible, and easy to get into, but still has the kind of depth required for a Golf game, with wind direction, and weather conditions playing an active part.

Harvest Moon

This is a very addictive simulation game where you have to run a farm, make friends, get married and have children and such. The game is honestly a lot more fun than it sounds, its infused with a whole load of charm and is always giving you new things to keep you busy and thoroughly entertained.

Rogue Squadron

This is the first game in the popular series of Star Wars-themed Mission-based shooters from Factor 5. The game has you piloting a variety of aircraft shooting down enemies, protecting allies, and tying up walkers. Most of the elements apparent in later games were already well established here, with the game offering a lot of fun and excitement, but I've dropped the game a few places in favour of its pseudo-sequel Battle For Naboo, which has aged a little better in my opinion.

Space Station Silicon Valley

One of the more interesting puzzle games on the N64, Space Station has you playing as a computer chip which can attach itself to animals to solve puzzles and complete objectives (each animal has different abilities). Its a quirky game with a lot of charm but can be a little slow paced at times and has a somewhat flawed difficulty curve. Best suited to those who like to take their time and work their way through problems as opposed to those looking for quick action and excitement.

Hydro Thunder

Watercraft racing game where you collect power-ups to fill up a boost gauge, and search for short-cuts. Hydro Thunder is a fun, attractive looking arcade port with excellent handling and controls. The game was available on most consoles of the time, with the PS1 version being slightly weaker and the Dreamcast version being better, but this was the only one with a 4-player split-screen option, and its a great example of what the N64 can accomplish when put in the right hands (ie Eurocom).

Vigilante 8: 2nd Offence

Sequel to the original Vigilante 8 game (which was also on N64). This is essentially a Twisted Metal style game, with the aim being to drive a variety of vehicles around arena's dispatching your opponents. The game is a lot of brainless fun, with devastating weapons and big explosions being the order of the day, and a cool 70s vibe playing throughout. This is a good port of the game, the music isn't quite as good as the Playstation version, but the graphics and control have been tweaked and there's now some excellent 4-player split-screen support.

Mortal Kombat 4

With Mortal Kombat 4 Midway attempted to bring the fighting series into the 3D era whilst also trying to take it back to its classic, mystical roots. The 3D here is more of a cosmetic addition overall, with the game mostly playing a lot like Mortal Kombat 3, but with some new dodge and weapon mechanics, as well as a more concerted attempt at character balancing for tournament play. Whilst the gameplay has more in common with the third Mortal Kombat game, the style of the first two Mortal Kombats makes a welcome return here, with the game filled with malevolent looking dungeons and arenas. Overall this has to be the best 3D fighting game on N64, its not top tier for its generation, but its still a worthy, fun play for fighting game fans.

Starcraft 64

Take Command and Conquer, then build on it with more options, better graphics, a higher emphasis on story, and more tactical polish, with three very different, very balanced factions to choose from and you get an idea of Starcraft. The game is a real time strategy where you have to mine minerals for cash and then use it to build up your base and army, with the ultimate goal of defeating your opponents. Starcraft was a highly respected, beloved title on the PC. This N64 port (the only console version the game received) is good, but like most RTS console ports suffers from the lack of mouse and keyboard controls, it does however include a pretty cool 2-player split screen mode, and the additional Brood War Expansion. If the game was cheaper I would wholeheartedly recommend it for all strategy fans, but unfortunately this sells for quite a bit on Ebay so to be honest its probably one for die-hard N64 fans only.

NBA Courtside 2

This is a Nintendo published Basketball game that was known back at the time for its advanced computer AI and high resolution graphics. The game is fun, polished, has a lot of moves and options, and looks great. A worthy addition to any sports fan's library.

Mario Party

Multiplayer focused collection of mini-games held together by a board-game styled map. The aim here is to navigate the map trying to collect stars, other stars are awarded at the end of the game for players who win the most mini-games, or fulfill other various objectives. With a bunch of friends joining in the Mario Party series is a lot of fun, and good for wasting inordinate amounts of time. The mini-games are varied and entertaining, and there are a lot of other quirks to keep the competition fierce and close. Single-player is a dire borefest so only grab the game if you think you can get multiple players together, each of the games in the series are barely any different to the last (even to this day) so pick up whichever you find that's cheapest.

Quake II

Fast, action packed first person shooter sequel to the original Quake. Big guns, gore, and grotesque monsters are the order of the day here, with you blasting your way across alien worlds, bases, and space stations. Quake II on the N64 is not actually strictly a port of the PC game, like Forsaken 64 its more of a new game made by re-mixing stages of the original, so there's a lot of familiar content here but the area layouts are different (and are now distinct, separate levels), on top of that GoldenEye-style level objectives had been added in. Overall the game is admittedly a little dated, with the aiming feeling a little imprecise at times, but there's a lot of good stuff here, and the 4-player deathmatch is also of a high quality.

Worms Armageddon

Turn-based strategy game where the aim is to use your team of worms to wipe out all the other teams on the map using a variety of wacky weapons. The game is on just about every system out there, and is quite rightly considered a multiplayer classic. This is a good version that's well worth picking up, but I can't really fully recommend the game to US fans unless its found cheap, as its simply not worth the ludicrous prices it sadly sells for these days.

Top Gear Rally 2

This is only a sequel to the first game in name only, its actually made by a completely different company and has a very different gameplay style and atmosphere, focusing more on realistic graphics and effects, and damage & repair elements. Its an excellent sim(ish) rally racing game with good controls, a great feel, a lot of content, and some fun and fluid sliding action.

Operation Winback

Operation Winback is a 3rd person shooting game similar in some respects to Syphon Filter, but with a lot of stealthy Metal Gear Solid style elements that give it more of an espionage feel (going out all guns blazing like you would in something like Syphon Filter will get you killed, fast). The game actually introduced some fundamental gameplay mechanics to the genre, such as the ability to take cover behind any object (which has become a staple of 3rd person shooters), and is somewhat un-appreciated, but its not without its flaws (mainly its difficulty curve). Still, it provides an excellent adventure, with an above average plot, lots of action, and some well-ahead-of-their-time controls.

Mystical Ninja 64

An awesome 3D action adventure game starring one of Konami's fan favourite characters, Goemon. Mystical Ninja has you exploring Goemon's world, navigating its overworld, and beating its dungeons to pick up new abilities required to proceed in your quest. Its the sort of thing you expect from a 3D action adventure game really, except with tons of surreal, wacky humour (the main antagonist's evil plan is to turn everyone in Japan into dancers!), and the odd stage here and there where you jump into a huge mech (which has its own introductory song!). The gameplay here has a lot of focus on platforming and melee combat, so its a little more action oriented than, say, the Zelda games. Overall its a totally mad, fun, and accessible adventure outing, and those who love wacky nonsensical Japanese humour should definitely check the game out.

Roadsters

This is a very nice arcade style racer with a well judged difficulty curve, and nice colourful environments with jaw-dropping visuals filled with lots of detail and small touches. The game gives you good, arcade style control, memorable courses, and other features such as differing weather conditions, pit stops, and tuning options. Its generally a sunny, lightweight, enjoyable game which looks great and is fun to play. This is by far the best version of the game out there, even the Dreamcast version managed to be inferior! with many bugs, graphical tradeoffs, and a general unfinished feeling bringing that particular version down a lot.

Turok: Rage Wars

Rage Wars is basically a mixture of Turok 2 and the then popular arena based fps games of the time such as Quake 3 and Unreal Tournament. There's no real story mode involved here, the game is completely focused on deathmatch play whether its being experienced in singleplayer or multi, with the aim simply being to navigate the maps killing everything in sight. There are a lot of advantages to doing it this way, the main of which is the fact that the framerate and graphics here are polished to perfection on multiplayer mode, and that the developers were given the time to

focus on crafting interesting levels filled with places to hide and take people by surprise. Outside of the two main modes there are some co-op options, and a nice variety of extra game types. As a multiplayer FPS this is easily the main competition for Rareware's incredible releases on the N64, with Rage Wars admirably managing to hold its own.

Rakuga Kids

One of the genre's the N64 struggled with was fighting games, luckily Konami's Rakuga Kids (unreleased in the US) just about fills the classic 2D fighter void. Rakuga Kids essentially plays like a Konami version of Capcom's X-men: Children of the Atom arcade game. The game has all the usual Street Fighter II quarter turn and combos, but with newer gameplay mechanics like high jumps and aerial raves bringing it more into line with its contemporaries. Its not quite up to the standards of Capcom's classic offerings but it has a few of its own gameplay mechanics that mix things up a little (such as the super moves being split into offense, defense, or combo's), and the game actually has an awful lot of charm too. I would recommend the game be played at 60hz (the PAL version doesn't seem to be optimised) as it plays a little too slow otherwise.

Micro Machines 64

Updated 2.5D version of the Mega Drive classic that had you racing miniature cars through huge real world environments (such as breakfast, or Snooker tables, garden paths etc). This is actually a port of the Playstation game Micro Machines V3, which included huge numbers of tracks and a variety of different vehicles (including tanks and such), and updated the graphics to polygons. As a port this is a good one, they added a number of turbo settings to make the game faster, and a couple of extra modes, whilst there are very few noticeable tradeoffs.

Glover

This is a very cool, and innovative (though a little rough around the edges) puzzle game that successfully brings back the ball rolling mechanics from the classic Marble Madness and combines it with 5th generation 3D platformer sensibilities. In the game you play as a glove that can walk around, jump, and ground pound, but also attach to, and manipulate a rubber ball which needs to be taken to the end of the stage through rolling, throwing, and bouncing. Its a smart game, and in many ways looks as though it influenced some of Sega's later games, such as Billy Hatcher, and Super Monkey Ball, causing a sort of short-lived renaissance of new Marble Madness descendents. Avoid the Playstation version, its an rushed port with inferior graphics, a lower framerate, simplified levels, and a slightly more frustrating camera.

Puyo Puyo Sun 64

Always one of the better Tetris style games to come out, the Puyo Puyo series featured an excellent core system which ended up working very well for combo-ing and competitive play. The game has you matching coloured blobs to remove them from the field before they build up and kill you, if you set the blobs up to create chain reactions as they're removed you can send them to your opponent as garbage to get in their way. Puyo Puyo plays as well as any other game in the series, and features updated graphics and sound as its pros

San Francisco Rush 2049

With the third game in the San Francisco series Atari eschewed any kind of pretence of realism and went straight for over the top futuristic action. This was a masterstroke and this change, coupled with a general honing of the gameplay provided a game that was a huge improvement over its predecessors. The racer has a big focus on elaborate short-cuts, and over-the-top crashes, expect loads of close calls and cork-screws through the air as you careen through the imaginative futuristic city courses.

Goemon's Great Adventure

The second Goemon game on the N64 went back to the classic 2D formula of the earlier SNES games (except now with a new 2.5D look), and actually stands as one of the best of these action-packed Goemon games ever released. The game is a fast action-adventure title that has you slashing and jumping through fiendish stages avoiding hazards and dispatching the multitude of enemies blocking your way. The classic 2D action is well done, and challenging, there's a 2-player co-op feature (and a hidden 4-player one), and the music is catchy and memorable.

Wetrix

Ingenious puzzle game from the Pickford brothers, whom some may remember for the SNES game Plok, or their earlier ZX Spectrum titles (Feud, Zub etc). The game has you building up a land mass in order to hold water, if the water leaks over the sides a meter builds up and you die when its full. It sounds simple, but as you progress more and more depth shows through as new elements show up which need to be carefully balanced, such as ice, and keeping the land mass' height low so as to avoid earthquakes (there are also a whole range of ways to multiply your points which I won't go into here). At first the game is a little unwieldy, but once you've gotten used to placing the pieces it becomes a very, very addictive, fun, and frenetic game.

Castlevania: Legacy of Darkness

With their first Castlevania game on N64 Konami had to make quite a few concessions to get it released on time, so whilst good it was still far from what they'd originally conceived, with some unpolished controls and camera implementation bringing it down a bit. Legacy of Darkness for all intents and purposes is a special edition of that first game, with improvements to the graphics, revisions to some of the levels, tightened camera and controls, and two entirely new character campaigns added to the two original ones. Overall this comes much closer to Konami's original goal, bringing Castlevania into a full 3D action adventure set-up of puzzles, combat, platforming, and memorable set-pieces. Writers of the time criticised Konami for rehashing the game at full price, saying this should've been the original release in the first place (a fair enough criticism), but these days it simply stands as the more complete version of the game for those who don't already own the good, but flawed original.

WWF No Mercy

Aki did a great job transferring the sport of wrestling to gaming form here, creating an excellent, and fun fighting engine, and including a lot of cool features such as the ability to create your own wrestler (improved for this installment) and 4-player modes. Outside of the gameplay, the graphics here are very good, all in all they've done a great job of recreating the look and feel of the show. Even today No Mercy is still often touted as being one of the greatest Wrestling games ever created, and for good reason.

Star Wars: Battle for Naboo

This plays like a pseudo-sequel to Factor 5's earlier game, Rogue Squadron, except this time using the prequel licence (making it a branch off of sorts I guess). Battle For Naboo, like its predecessor has you piloting a variety of craft trying to fulfill specific mission objectives whilst shooting down enemy vehicles along the way. The main change here is that unlike Rogue Squadron, which was primarily about flying dogfights, Battle for Naboo adds in a lot of new ground based missions. The graphics and sound here are phenomenal, and not only improve on the earlier game, but actually stand as some of the most impressive on N64, with an excellent draw distance, level of detail, and near CD quality music! Where the gameplay is concerned I'd say this is also a little more polished over Rogue Squadron, it feels easier to get into and less frustrating.

Donkey Kong 64

Praised at the time for its huge scope and technical prowess DK64 tends to garner a little more of a mixed reaction these days. Donkey Kong 64 is a work of pure excess, the idea that more is always better. The game includes many times the number of items to find than Mario 64 and Banjo Kazooie, pretty much everything that can be collected, has to be. Some say the game is simply too big, personally I think the problem is more one of pacing, there's just not enough levels here to fit all this stuff into, you end up getting bogged down searching the same levels over and over instead of moving forwards and seeing new things to keep you interested. On the other side though, there is a lot to like here, many of the challenges are as fun as you'd expect from Rare, the environments are cool and well designed, and its certainly technically excellent too (in fact DK64s greatest strength over its siblings Conker, and Banjo Tooie remains is graphics and smooth framerate). Overall its long and bloated, but for those who love these kinds of games and just have to collect every last thing this will probably be mana from heaven.

Bust a Move 99/Puzzle Bobble 3

This is a revamped version of the 3rd Bust-A-Move game. The game is a puzzle classic which has you shooting coloured bubbles at clumps of same coloured bubbles to burst them and hopefully clear the screen. The gameplay here is as great as it was in earlier iterations of the series, with the added extra here of an excellent 4-player battle mode (which is a rare feature for the series). Overall its a very polished, and well-ported version of what was a classic arcade game.

World Driver Championship

Whilst the N64 library is packed with many of the best racing games of its time, realism in the genre is not really the system's strong point. World Driver Championship is the main challenger representing this side of the genre, luckily its a good game, and manages to be one of the most graphically impressive titles of its generation. The game starts off a little slow, with some of the early cars not having the best handling, but give it some time and everything starts to fall into place revealing a very playable, challenging, in-depth, and enjoyable racing experience to get stuck into.

Bangai-O

Treasure ended up making a total of three games in for the N64 and as can be expected of a company with such pedigree, all of them ended up pretty much being stone cold classics. Bangai-O is a very unique, frantic, and generally over-the-top shmup that has you piloting a hovering mech through a bunch of different stages shooting anything that moves. The game controls well, with you being able to fire in any direction and move independently, and it never stops being exciting and totally engrossing.

Wipeout 64

It was a long time coming, but when the popular futuristic racing series did eventually make it to the N64 it was worth the wait. Wipeout 64 may not have been the greatest Wipeout of its generation, but its definitely the most under-appreciated one. Whilst rarely mentioned, this is actually very competitive with the Playstation classics, containing all of their rewarding gameplay, and stylish art design. Wipeout 64 is essentially a re-jigged amalgamation of the first Wipeout game, and Wipeout 2098, containing altered courses from both games that have been changed to emphasise speed, and have new environment artwork. The re-jigged stages look fantastic, and very different to the originals, new analogue controls give you a glorious feeling of precision in movement, there's an excellent new challenge mode (great addition), and this is also the only game in the series to feature a 4-player split-screen mode.

The World is Not Enough

GoldenEye was a hard game to follow, but it has to be said that Eurocom actually did a pretty good job here as TWINE is certainly one of the more criminally overlooked first person shooters of its generation (note that this game is an N64 exclusive, the PS1 game is completely different, and inferior). The game closely follows the gameplay mechanics of GoldenEye, giving you a load of mission based stages requiring shooting skills, stealth, and general espionage inspired gameplay gimmicks. In my opinion the single player experience of TWINE has actually dated much better than many other fps titles on N64, mainly due to Eurocom's focus on getting the game running smoothly with a good framerate and clean, detailed graphics. Levels tend to be more consistent here than in GoldenEye, but obviously its all very derivative, and the multiplayer is unfortunately inferior. Ironically many years later Eurocom actually went on to make the remake of GoldenEye on the Wii. Fans of Rare, and Free Radical's fps titles should definitely check this out.

Beetle Adventure Racing

Easily one of the best arcade style racers on the N64, Beetle Adventure Racing focuses on uncomplicated fun, and colourful, imaginative courses filled with secrets to discover. The game is infused with a quirky, non-serious vibe, with you racing through courses populated with things like Dinosaurs & UFO's, and careening off ski jumps. There's a lot of content here to keep racing fans busy (including a 4-player battle mode), and due to its offbeat nature its actually aged quite well.

Jet Force Gemini

Another memorable game from Rare, Jet Force Gemini is a 3rd person shooter reminiscent of games like MDK and Body Harvest, except with Rare's usual humour and cartoon styling apparent in spades. The game is mainly focused on gung-ho action, with you amassing loads of fun, overpowered weaponry to deal death and destruction to your enemies, but there's also ample adventuring elements, and other secondary mission objectives to keep you involved along the way.

Pilot Wings

Pilotwings was a beautifully realised N64 launch title which has you flying different aircrafts (including Auto-Gyro's, hand-glider's, and jet packs) around islands fulfilling a range of mission objectives. This sequel to the SNES original was made by Paradigm, who had previously been a company specialising in designing commercial flight sims for the US department of defence (amongst others). Nintendo contracted them to develop the game, and they subsequently shifted their projects towards gaming, going on to develop some other interesting, and underrated titles, such as the aforementioned Beetle Adventure Racing, and Duck Dodgers. I'd say Pilotwings remains their greatest release though, a very singular, unique, and carefree experience.

Mario Tennis

The best of Mario's sports outings, Mario Tennis has you playing some very fun, arcade focused Tennis with famous characters from the Mario franchise. The game has all the required elements you'd expect from a good Tennis game, with good controls, a variety of different shots, and multiple court types. It also has some Mario themed game modes which are a lot of fun, such as one which has you using items a la Mario Kart. All in all a very admirable, and fun Mario outing which is great to play both alone and with friends.

Mischief Makers

Treasure make another appearance here, this time to deliver what has to be the systems best 2D platformer. Mischief Makers is a unique, and interesting game that's full of ideas, humour, and some of the most memorable boss battles ever conceived. The game focuses on the mechanic of manipulating objects by shaking, throwing, and pulling, this,

added to the sheer variety of levels really makes the title a breath of fresh air for the genre. All in all just the sort of fun you'd expect from Treasure.

Rocket: Robot on Wheels

Here's another objective based 3D platformer a la Mario 64, this time from newly formed developer Sucker Punch (who went on to make the excellent Sly Cooper games). Unlike some of the other pretenders to the throne, the developers here really tried to think outside the box, creating a game filled to the brim with puzzles that are clever, and innovative, and a general design that is smart and imaginative. Definitely one of the lesser known "must plays" of the N64, Rocket even manages to give Banjo, and Mario a run for their money.

Shadow Man

This is an excellent action adventure game throwing you into a fully formed world of grim horror, violence, and intrigue (think of the Ocarina of Time with blood, gore, chains, and axe wielding maniacs!). Like most action adventure games this is non-linear, with your character having to explore hell (the literal one) collecting lost souls to increase his health and open up areas, as well as accumulating new moves along the way. The game is fairly tough, with little hand-holding along the way (make sure you get a copy with a map), but it's a well crafted game for those who like to fully explore, and get completely immersed in their games. A word of caution, avoid the horribly rushed Playstation port, it's a bit of a mess unfortunately (the Dreamcast version on the other hand is excellent).

Spider-man

I don't think anyone really expected this licence game to turn out quite as good as it did, but the great platforming action (that included all of Spider-man's signature moves), and inclusion of cool stealth elements, all held together with high quality programming created a real winner in the sea of licensed dross (Superman 64 anyone?). The porters did a very good job here, with the graphics maybe looking a little better than in the PS1 version, and the only real omission being the lack of FMV (but to be totally honest that actually kind of sucked on the PS1 anyway).

Body Harvest

One of the most ambitious games of its generation, Body Harvest was DMA's (the company who would go on to be Rockstar North) first foray into the 3D open world sandbox genre, and was the spiritual precursor to the famous Grand Theft Auto III. Body Harvest had a very tumultuous release. It was originally planned as a launch title, but the original publisher, Nintendo kept sending it back on the grounds of it being too violent. Eventually Nintendo dropped it entirely and DMA had to search for a new publisher, the game ended up getting released two years late! Body Harvest, at its heart is a 3rd person shoot-em-up that has you trying to stop an alien "harvest" of the human race, you go back and forth through time shooting the bug-like aliens and trying to shut down their human-mulching operations. The thing that makes it so original is the sheer freedom of choice involved, you get to explore the huge levels however you feel, procuring a multitude of cars, tanks, boats, and even aeroplanes to fulfil your objective. Outside of that though, the game is full of good puzzles, fun weapons to use, and whilst not that graphically great, has a lot of atmosphere, with a sinister, sometimes melancholy feel to it. Body Harvest takes time to get going, and is quite a tough game due to some very spread-out save points, as such it's probably a game for adept players who want something challenging, casual players may find it frustrating.

Turok 2

Another stand-out first person shooter for the N64, Iguana Entertainment (the spiritual predecessor to Nintendo's

Retro Studios) made a lot of changes to this sequel from their earlier hit, with numerous changes to both gameplay, and general theme. Turok 2 was packed with big, non-linear levels to explore, some of the coolest weapons ever to grace an FPS, memorable set-pieces (such as riding on the back of an armoured Triceratops), impressive graphics, and loads of over-the-top gore. The game is slow to start, and has a high difficulty level, but perseverance pays off and reveals a meaty adventure with lots of serious FPS action. Turok 2 is a little dated by today's standards, with an unreliable framerate often causing problems (stick to Letterbox Mode), but even now it remains a unique and worthwhile gameplay experience on N64.

Excite Bike 64

Coming very late in the N64s lifespan, Excite Bike shot out of nowhere and managed to be one of the finest dirt bike racing games of its time. The game carries on Nintendo's high pedigree of polished, in depth terrain-focused racers, competing very favourably with the likes of Wave Race and 1080. Like those two classics Excite Bike contains an excellent physics model, and intuitive controls that leave a lot of room for mastery, and finesse. Its a shame so few people got to play the game as sadly most had moved on to newer consoles by the time it was released.

Ogre Battle 64

Unfortunately, unlike its predecessor the SNES, the N64 always struggled to provide RPG fans with enough games to play. Happily, when Ogre Battle 64 arrived it didn't disappoint the genre starved N64 fans, and the game serves as the system's primary serious RPG. Ogre Battle's gameplay is focused on tactics, it gives you large numbers of units and classes each with a variety of uses and strengths, and the main crux of the gameplay is in growing and managing these units into an effective army through careful formation positioning, general experience accumulation, and purchasing weaponry and armour. The game has a lot of content, is very long, and has an in-depth plot which branches off to provide multiple different endings.

Tony Hawk's Skateboarding 2

This is a good port of the Playstation classic. The Tony Hawks games essentially have you placed in an environment with a set of objectives, such as reaching certain points thresholds by doing tricks, or collecting certain objects etc. The games are very rewarding to practice and learn, with tons of moves and opportunity for flair. This port is well done, the sound quality is slightly lower than the PS1 game, but the graphics are smoother, and there's a new additional area.

Mario Kart 64

The Mario Kart series has to be one of the premier multiplayer game experiences ever devised, and the N64 iteration happens to be my favourite of them all. For anyone who's not familiar with the series, players race around courses vying for first place whilst picking up a variety of weapons to mess with their opponents. Mario Kart 64 has some of the most memorable courses of the series, with a well balanced selection of choices available, ranging from simpler courses such as Luigi's Raceway, all the way up to tricky ones like Banshee's Boardwalk, or the hectic mirror mode of Toad's Turnpike, there's even some out and out odd ones like the anonymous, multi-pathed Yoshi's Valley to add variety. MK64 also doesn't baby the player as much as subsequent releases, with each course promoting a plethora of tactical thinking, as well as many containing decisive shortcuts. It was a hard decision for me to leave this out of the top 20, but in the end I just can't overlook the poor single-player mode, which feels like an afterthought to the (admittedly) amazing, and timeless 4-player experience.

Ridge Racer 64

I'd have to say this is the system's best arcade style racer. Ridge Racer 64 isn't really a true port of any of the earlier games, Nintendo's NST division (also responsible for the later GameCube racers 1080 Avalanche and Wave Race: Blue

Storm) pretty much created this game from the ground up themselves, merely taking the course layouts from Ridge Racer, and Ridge Racer Revolution. Ridge Racer 64 plays in a very different manner to those games, feeling a little more over-the-top and bombastic, with much more ludicrous (and fun) drift mechanics, and a more clean, almost bordering on cartoony art style, it sometimes feels like the love child of Ridge Racer and Sega's Daytona. On top of the old courses you get an excellent brand new area (Desert) with three more exclusive courses. In the battle of the Ridge Racers I'd have to say that the PS1s Type 4 is the better game, but honestly this is such a different experience that there's no reason to choose one over the other, Type 4 was focused on unlockables and content, whilst this is a more challenging game which aims at a more traditional difficulty curve.

Blast Corps

What a genius concept for a puzzle game! a truck containing nuclear missiles is out of control and you have to clear a path for it using an assortment of vehicles (including giant robots) before it crashes. This game really manages to build up the tense action, and stands as one of the more original titles in the N64's library.

1080 Snowboarding

1080 was one of the most important, if not the most important snowboarding game of the so called 5th generation. Most of the other snowboarding games of this period were very lightweight on physics, 1080 on the other hand went to town on making sure that the physics, handling, and general feel of the board were just right, really trying to recreate the feeling of traveling over different types of snow. Its a rewarding game that requires a lot of careful precision, having much more of a sim-ish feel than its later GameCube sequel.

Resident Evil 2

Before this arrived I don't think anyone would've believed such an accurate port of Resident Evil 2 could be possible. The game was very much designed around the strengths of the PS1 and CD format, so fitting all that data onto a cartridge had to be a real feat of design. Resident Evil 2 was one of the premier survival horror games of its generation, it has you making your way through a city shooting at zombies and solving puzzles, making sure to conserve ammo and health along the way. The N64 port handles itself very well, the fmv quality is lower here than in the PS1 version, but some of the areas have had a resolution increase (expansion pak required), and the game now has surround sound, overall its around par with the PS1 version but with tradeoffs.

Rayman 2

It's all well and good jumping around solving puzzles and collecting stars and such but sometimes you just want an uncomplicated, enjoyable platform romp, and that's exactly what Rayman 2 delivers. The game is just full to the brim with classic, straightforward 3D jumping action, and the new gameplay mechanics (such as the awesome grappling hook) really add to the experience and help to make sure you're never less than fully engrossed. This N64 version was one of the original releases (this and the PC version came out first), it holds up very well (much better than the PS1), and pushes the hardware, but the later Dreamcast version was admittedly a little better.

Star Fox 64

This is an inspired update of the SNES classic. Star Fox is a rail shooter that has you piloting a variety of vehicles, from spaceships, to tanks and submarines along a set path blowing up everything that stands in your way. The game plays beautifully, with inspired, memorable boss battles, and level designs that never become repetitive. Replayability is also high due to the inclusion of an addictive combo-based medal system whereby you can acquire medals by hitting

certain points thresholds for each level (points go up if you blow up multiple enemies with each shot), as reward for hitting these targets you unlock extra modes, such as the fun (but lightweight) 4-player battle mode included with the game.

Banjo Kazooie

With Banjo Kazooie Rare took what was laid down in Mario 64 and built on that foundation, adding an interesting 2-in-1 character design (later used in the Ratchet and Clank series), more focus on proper characterisation, with Banjo and Kazooie really having personalities of their own, and a presentation that was well beyond that of that launch title classic. So why is it lower? the decisive factor for me is the lack of clues in BK, its a small point but I find you tend to get stuck a little more often here than in Mario 64.

F-Zero X

Whilst not looking like the most attractive of racers for its time, what F-Zero X lacks in the graphics department it more than makes up for in the adrenaline fueled white-knuckle speed department, and the lack of graphical detail helps to keep that speed running at a super smooth framerate. Track designs here are inspired, with loads of tubes and corkscrews to race on, and through, the music is great, and there's loads of content and modes to keep racing fans happy. Another first class racer from Nintendo.

GoldenEye

Everybody knows about GoldenEye, probably the N64's biggest killer app of the time (the game was just so far ahead of every other console FPS out there that it ruled the roost for years!). This milestone release amazed gamers with it's stealthy gameplay and multitude of different weapons and features, not to mention the massive amount of replayability it had in the form of an addictive 4-player splitscreen deathmatch mode (a feature that had been previously nonexistent). These days however I find the game a little bit dated due to a few weak level designs, and some dodgy enemy AI, and its also my belief that its unofficial sequel, Perfect Dark, had a lot of major improvements made to what was pioneered here, I've dropped it a few places due to these reasons.

Wave Race

Here's yet another racing classic for N64, cementing just how strong the system was for that particular genre. Wave Race was a truly amazing game when originally released, in no small part due to the undeniably brilliant (for the time) water effects, which added a new depth to the control and feel of the game, but also due to some extremely well-judged gameplay, and an enduring sunny, summer vibe that shines through. Definitely one of my personal favourites in the racing genre.

Super Smash Bros

I'm going to say it, Smash Bros was probably the most important fighting game to appear since Street Fighter 2. Coming completely out of the blue with a totally unique, amazingly fun and well judged battle system (kinda' based on sumo of all things), Nintendo crafted the supreme 4-player fighting game experience. Smash Bros has you choosing from a variety of Nintendo stalwarts, ranging from Mario and Donkey Kong, to Link and Samus, you bounce around the brilliant arenas fighting, wearing each opponent down until you can deliver a coup de grace knocking them out of bounds. The start of what has to be one of the greatest multiplayer gaming series' ever created, N64 didn't have many good fighters, but at least here it had one of the best.

Diddy Kong Racing

With DKR Rare looked at Super Mario Kart, and Mario Kart 64 and went to town on trying to create a better game. Here we have a very different 1-player experience to the afterthought that was seen in MK64, there's more tracks, an overworld hub to explore, a variety of challenges, and even true boss fights against a bunch of memorable opponents. On top of the Kart racing Rare even added two other vehicles to use which really add to the game's variety, a plane to fly around in, and a hovercraft for water stages. Just as soon as you think you've got a handle on the game it throws you into Wave Race style courses with their own water physics! Honestly its almost like you get three different games in one here, and that's not even taking into account the variety of other multiplayer modes on offer. As mentioned earlier where it comes to multiplayer shenanigans MK64 definitely has this beaten, but in the single-player Kart racing stakes this is pretty much unbeatable.

Banjo Tooie

This sequel to the beloved Banjo Kazooie built upon the foundation of the excellent original game by putting much more focus on well written dialogue and creating a more interesting plot, resulting in a humourous, and more engrossing overall experience. Tooie is packed with many more ideas and puzzles than the original, there are some excellent new boss fights, and a more ambitious, fully formed attempt at an overworld. Thankfully it doesn't get bogged down like Rare's other release from the same period, Donkey Kong 64, its just much pacier and better retains a sense of wonder throughout.

Majora's Mask

Much darker and more downbeat than it's N64 sibling, Majora's Mask managed to squeeze even more out of the 64' with even better graphics this time around (with what is, in my opinion far superior art design), and also added in many cool new ideas of its own. Majora's Mask's gameplay revolves around a three day system. Time moves forward as you play and at the end of the third day the world ends, forcing you to return to the first day again (hopefully having achieved something concrete that will aid you in your quest), many puzzles also require you to do certain things on certain days, which adds to the complexity. In regards to atmosphere, and plot, this game is second to none, the game doesn't have as many dungeons as Ocarina, but the side quests are fun, and memorable, and the whole world, and the people living in it are very fleshed out. You really feel as though you're watching the final days of peoples lives play out before the end. Why is the game lower than Ocarina? personally, for me, in straight comparison this is the better game, but I can't overlook the fact that this blatantly re-uses a hel-luva lot from Ocarina, and Ocarina was the big originator, so for that reason I've put this lower, just by a hair's breadth.

Paper Mario

Paper Mario takes pride and place as the best RPG on the N64. Though the N64 isn't really known for its RPGs, Paper Mario is a very high quality one, the battle system looks fairly simple on the outside, and is very easy for beginners to pick up, but its a lot of fun and there's a bunch of tactics for older gamers to discover here. The battle system is based on using the most effective moves, and timing your button presses to make attacks and defense more effective, badges can also be discovered and equipped which give a variety of different abilities and effects. The graphics are bright, and jolly, the story is fun, and unlike a lot of traditional RPGs you get to do loads of puzzles throughout the dungeons to keep your brain on its toes (think Zelda), this factor, as well as the lack of random encounters make the game very easy to pick up and play, making it a title that should definitely be checked out by both RPG fans, and non-fans alike.

Perfect Dark

Rare built on their earlier FPS classic GoldenEye in virtually every respect here, and then threw in more options and extras than anyone could've ever imagined. Not only was the whole campaign mode that little bit more consistently

brilliant, with well balanced, graphically superior stages containing tons of stealth and action, but the whole thing could now be played in co-op (make sure the screen's split vertically) and counter-op as well, and added to that was a co-op mission mode that was nearly another complete game on its own. On the multiplayer front there were tons of different modes, new levels, guns (as well as many of the old classics from GoldenEye making a welcome return) and AI bots to play with. The new Sci-Fi theme allowed for much more imagination, and resulted in guns and environments that were much more memorable and unique. Outside of that Rare threw it loads of stat counters, and extra game options as a bonus. Simply phenomenal.

Sin and Punishment

Sin and Punishment has you controlling two rebel heroes as they plough through reams of monsters and soldiers. The game is a rail shooter, so you move along a set path, only really needing to focus on bullet dodging and aiming. Here you also get a close quarters melee attack, and can rebound powerful enemy shots to do more damage. The title is among the best action games of its generation, with excellent controls, a great, over-the-top plot, and some of the most memorable set-pieces ever to grace a game. The audio here is first rate, with brilliant voice acting (which is all in English I might add), and very high quality music. All these elements add up to make Sin and Punishment one of the best rail shooters ever created. Treasure at their very best.

Super Mario 64

Who out there can say they weren't astounded when they first saw this game in action? Mario 64 brought new levels of control and immersion to the 3D platformer, here you were free to explore the fully realised world, you could creep, jog, or run through the stages (due to the well implemented analogue controls), and had at your disposal a myriad of different jumps and maneuvers crafted to fit every occasion. Levels here were well designed, fun to explore and see, and were filled with variety and ideas (Who can forget the first time they took to the skies with the flying cap?). Easily one of the most influential games ever made.

Ocarina of Time

After Mario 64 set the bar for what you could do with a 3D environment, Ocarina managed to raise the bar even higher, bringing a much more cohesive experience. Gone were the thinly veiled teleporters of Peach's Castle, to be replaced with a full 3D overworld littered with dungeons and villages to explore. I'm not quite as enamoured with this game as many people are (I find some of the art design and plot to be lacking), but it can't be argued that Ocarina has some of the most carefully designed, and polished gameplay of its time. Each dungeon has been honed to perfection, and they all manage to be both consistently clever, and intuitive. The game's fighting system (whereby you can target enemies and maneuver around them) is elegant, and well thought out, allowing for dynamic and exciting battles. Overall Ocarina more than deserves its reputation as one of the best releases of its generation. In regards to later ports, the original gold cartridge N64 version is the only one that is uncensored, all subsequent releases had the red blood removed, as well as the Islamic chanting which took place in the Fire Temple stage.

Conker's Bad Fur Day

A huge, enjoyable romp through pastiches of everyone's favourite movies, Conker's is my clear choice for best game on the N64. This game brought everything Rare had learnt about making platformers together to create a big, highly ambitious game filled with variety and fun. There's a memorable plot (which might not have been the most cohesive, but managed to be totally engrossing and consistently funny), some of the best graphics to be seen on the system, and a mass of excellent multiplayer modes thrown in for good measure. On a technical level Conker leaves most other N64 games in the dust, including voice acting with lip synching, amazing levels of textures (which was one of the 64's

biggest technical limitations) and dynamic shadowing. Even now I struggle to think of any game out there quite like it.
